The United States Light-House Establishment.

The following are the members of the Light-House Board:  
 Oscar S. Straus, Secretary of Commerce and Labor and *ex-officio* President of the Board.  
 Rear-Admiral George C. Reiter, Chairman, Washington, D. C.  
 Col. Walter S. Franklin, Baltimore, Md.  
 Dr. Henry S. Pritchett, Carnegie Foundation, New York.  
 Col. Daniel W. Lockwood, Corps of Engineers, U. S. A., New York.  
 Rear-Admiral Albert Ross, U. S. N., Washington, D. C.  
 Lieut.-Col. Harry F. Hodges, Corps of Engineers, U. S. A., Washington, D. C.  
 Comd'r J. M. Helm, U. S. N., Naval Secretary, Washington, D. C.  
 Lieut.-Col. Thomas L. Casev, Corps of Engineers, U. S. A., Engineer Secretary, Washington, D. C.  
 The establishment is divided into sixteen districts, each in charge of an inspector and engineer, the former being navy and the latter army officers. The Board has supervision of all administrative duties relating to the construction and maintenance of light-houses, light-vessels, beacons, fog-signals, buoys, and their appendages, and has charge of all records and property appertaining to the establishment.

The United States Government Printing Office.

The Public Printer has charge of all business relating to the public printing and binding. He appoints the officers and employees of the Government Printing Office, and purchases all necessary machinery and material. The foreman of printing has charge of all matter which is to be printed. His department consists of the following divisions: The document, job, specification, press, folding, stereotype, and Congressional Record rooms, as well as the various branch offices. The Superintendent of Documents has general supervision of the distribution of all public documents, excepting those printed for the use of the two Houses of Congress and the Executive Departments. He is required to prepare a comprehensive index of public documents and consolidated index of Congressional documents, and is authorized to sell at cost any public document in his charge the distribution of which is not specifically directed. The following are the official heads of the several departments: Public Printer, Charles A. Stillings; Chief Clerk, Henry T. Brian; Foreman of Printing, Charles E. Young; Foreman of Binding, Harry F. Ashion; Foreman in Charge of Congressional Record, John R. Berg; Superintendent of Documents, William L. Post.

United States Secret Service.

The Secret Service Division of the Treasury Department is under the direction of John E. Wilkie, chief of the division. The service is principally engaged in detecting and prosecuting makers and dealers in counterfeit paper money and coin, although its operations include the detection of all violations of the laws of the United States. Details are also furnished for the protection of the President of the United States, and in the frequent journeyings of the present President he is always accompanied by one or more secret service men.

The arrests of counterfeiters number about 400 annually; other arrests are for bribery, impersonating United States Government officers, perjury, and violating Sections 5,392, 5,414, 5,415, 5,424, 5,432, 5,438, 5,440, 5,459 and 5,479 of the United States Revised Statutes.

Alabama, Arkansas, Colorado, Connecticut, Illinois, Minnesota, Mississippi, Missouri, Ohio, Tennessee, and Wisconsin were named from their principal rivers. Carolina from Charles IX. of France; Georgia from George II., Louisiana from Louis XIV of France; Maryland from Henrietta Maria, Queen of Charles I., New York from the Duke of York, afterward James II., Virginia from Queen Elizabeth, the virgin queen; Pennsylvania from William Penn, and Delaware from Lord Delaware. Dakota, Massachusetts, and Texas took their names from Indian tribes, and Idaho, Iowa, Kansas, Kentucky, Michigan, Nebraska, Oklahoma, Oregon, Utah, and Wyoming were derived from Indian words.

"IN GOD WE TRUST"

"In God We Trust" first appeared on the copper two-cent issue of 1864, and was the first use of the word "God" in any Government act. The sentence was introduced by James Pollock, Director of the Mint, with the approval of Secretary of the Treasury Solomon P. Chase. It appeared on the 1866 issue of the double eagle, eagle, half-eagle, silver dollar, half dollar, and nickel five-cent piece, in lieu of the long existing motto of "E Pluribus Unum." In the Trade Dollar issue (1873) both mottoes were retained, "In God We Trust" appearing on the obverse.—Townsend.

The following was the statement of receipts and expenditures by local associations in 1906:  
 Receipts: Weekly dues, \$167,346,676; paid-up stock \$12,625,500; deposits, \$39,433,406; loans repaid, \$143,951,964; interest, \$39,601,780; premium, \$3,157,704; fines, \$505,020; pass books and initiation, \$733,608; borrowed money, \$43,639,044; real estate sold, \$7,511,508; miscellaneous receipts, \$13,210,260; total, \$494,286,996.

Disbursements: Pass book loans, \$12,258,696; mortgage loans, \$197,244,864; stock withdrawals, \$145,764,720; paid-up stock withdrawals, \$13,577,064; deposit withdrawals, \$34,910,172; expenses, \$5,427,636; borrowed money, \$43,601,832; interest, \$1,100,412; real estate purchased, \$3,907,260; miscellaneous, \$11,604,325; total, \$496,397,483.

The officers of the League, elected at the annual meeting of 1907, are as follows: President, J. N. C. Shumway, Taylorville, Ill.; First Vice-President, W. G. Weeks, New Iberia, La.; Second Vice-President, B. H. Jones, Boston, Mass.; Third Vice-President, Jay W. Sutton, Sault Ste. Marie, Mich.; Treasurer, Joseph K. Gamble, Philadelphia, Pa.; Secretary, H. F. Cellarius, Cincinnati, Ohio; Assistant Secretary, Addison B. Burk, Philadelphia, Pa.

In 1893 there were 240 national building and loan associations in the United States, with total assets of \$37,020,366. Since that date this class of associations has greatly decreased in numbers. On Jan. 1, 1907, they were approximately fifty in number, with estimated assets of \$16,500,000.

### Production of Coal.

AREA OF THE WORLD'S COAL-FIELDS, IN SQUARE MILES.

CHINA and Japan, 200,000; United States, 194,000; India, 35,000; Russia, 27,000; Great Britain, 9,000; Germany, 3,600; France, 1,800; Belgium, Spain, and other countries, 1,400. Total, 471,800.

The coal-fields of China, Japan, Great Britain, Germany, Russia, and India contain apparently 303,000,000,000 tons, which is enough for 450 years at present rate of consumption. If to the above be added the coal-fields in the United States, Canada, and other countries, the supply will be found ample for 1,000 years. Improved machinery has greatly increased the yield per miner, and thus produced a fall in price to the advantage of all industries.

The production of the principal countries in 1906 in metric tons of 2,205 pounds was: United States, 375,397,204; United Kingdom, 251,050,809; Germany, (c) 193,533,259; Austria-Hungary, (a) 40,850,000; France, 34,313,645; Belgium, 23,610,740; Russia, 16,990,000; Japan, 12,500,000; Australasia, 10,347,259; India, 9,258,466; Canada, 9,033,973; Spain, (a) 3,284,576; Sweden, 296,980; South Africa, (b) 3,900,000; Italy, (a) 473,293; all other countries, (b) 5,500,000; total, partly estimated, 990,502,793 metric tons. (a) Including lignite. (b) Estimated.

Over 5,000,000,000 gallons of petroleum, according to the office of the Geological Survey, are now produced annually in the world. Of this amount 2,500,000,000 are produced in the United States, 2,250,000,000 in Russia, and the remainder is distributed among a dozen countries, Austria producing 87,000,000; Sumatra, 72,000,000; Java, 30,000,000; Canada, 29,000,000; Germany, 16,000,000. The United States exported \$75,612,000 and Russia \$23,676,000 worth of mineral oil in 1900.

**Production of Copper, Tin, and Zinc.**

The production of copper in the world in 1906, stated in metric tons of 2204 lbs., was as follows: United States, 416,226; Spain and Portugal, 60,100; Chile, 26,157; Japan, 40,528; Germany 20,665; Mexico, 62,690; Australasia, 36,830; South Africa, 6,645; Canada, 19,106; other localities 36,312; total of the world, 715,268.

The copper production of the United States in 1906 was distributed as follows (figures are in tons of 2,000 lbs.): Alaska, 4,350; Arizona, 131,600; California, 12,210.5; Colorado, 4,732.5; Idaho, 4,746.5; Michigan, 112,035.5; Montana, 149,925; New Mexico, 3,131; Utah, 24,856; Wyoming, 73; Southern States, 9,410.5; other States, 1,689.5; total productions, 458,810.

The production of tin in the world in 1906, in long tons, was: England, 4,920; Straits Settlements, 58,438; Banca and Billiton, 11,250; Australasia, 6,888; Bolivia, 14,700; United States, none; total of the world, 96,196.

The production of zinc in the world in 1906, in metric tons, was as follows: Austria, 10,780; Belgium, 152,461; France, (c) 48,236; Germany, 205,691; Holland, 14,650; Italy, (d); Russia, 9,610; Spain, (c) 5,500; United Kingdom, 52,587; United States, 204,548; total of the world, 704,113.

**Copper and Lead Smelting.**

(From Census Bulletin No. 86.)

According to the special reports to the Census Bureau, 103 establishments were reported as engaged in the combined industry of copper, lead and zinc smelting and refining, in 1904. Their combined capital was \$164,349,036. They employed 26,853 wage-earners, paid \$20,058,200 in wages, consumed material costing \$382,723,480, and manufactured products to the value of \$451,398,354.

At the Census of 1900 the lead smelting and refining industry was the most important of the three branches, and copper was second; but at the census of 1905 the positions were reversed. At the later census the copper industry supplied 46.8 per cent. of the capital, 47.5 per cent. of the wage-earners, and 53.3 per cent. of the value of products, while the lead industry furnished 38.8 per cent. of the capital, 28.2 per cent. of the wage-earners, and 41.2 per cent. of the value of products. That the growth of the copper industry has been greater than the growth of the lead is partially due to an increase in the practice of smelting the dry ores of the precious metals with copper instead of lead ores.

**COPPER SMELTING AND REFINING.**

Copper smelting and refining was the principal industry of 40 establishments, the combined capital of which was \$73,824,640. These establishments furnished employment to 12,752 wage-earners, paid \$10,827,043 in wages, consumed materials costing \$106,736,986, and manufactured products to the value of \$240,780,216.

When compared with the figures for the Census of 1900, those for 1905 show a decrease of 14.9 per cent. in the number of establishments, but an increase of 44.8 per cent. in capital, of 12.6 per cent. in wage-earners, of 26.9 per cent. in wages, of 61 per cent. in cost of materials, and of 45.8 per cent. in the value of products.

**COPPER REFINED IN THE EAST.**

The growth of the industry, however, has not been uniform in the sections east and west of the Mississippi. The figures reveal a tendency toward the growth and concentration of the refining industry in the Eastern territory. In 1900 this territory reported only 86.8 per cent. of the refining, while in 1905 it reported 98.8 per cent. The operations of the Western establishments are now confined almost entirely to smelting, with, in a majority of cases, the conversion of the matte into blister copper, which is electrolytically refined in the East.

**GOLD AND SILVER BY-PRODUCTS.**

At the Census of 1905 the product of smelting was valued at \$88,374,830 and that of refining at \$149,711,214. The products of smelting consisted roughly of 539,000,000 pounds of fine copper contents of blister or anodes, valued at \$60,000,000; 82,000,000 pounds of fine copper contents of matte, valued at \$9,000,000; 22,000,000 ounces of silver, valued at \$12,000,000, and 322,000 ounces of gold, valued at \$6,000,000. The products of refining consisted roughly of 934,000,000 pounds of ingots, wire, bars, etc., valued at \$119,000,000; 28,000,000 pounds of blue vitriol, valued at \$1,000,000; 28,000,000 ounces of silver, valued at \$16,000,000, and 636,000 ounces of gold, valued at \$13,000,000. Thus it appears that the product of the precious metals resulting from smelting and refining copper is valued at about \$29,000,000. In 1900 the product of the precious metals resulting from smelting and refining copper was a little more than \$12,000,000.

**NEW JERSEY THE LARGEST PRODUCER.**

New Jersey is the largest producer of refined copper, and between 1900 and 1905 it increased its production of the total for the country. Of the 602,595,113 pounds of ingots, wire, bars, etc., reported in 1900, New Jersey produced 28.3 per cent., while of the 933,809,701 pounds reported in 1905 it produced 35.6 per cent. The refining industry in New York also made a great advance, so that the States of New Jersey and New York reported for 1905 nearly two-thirds of the refined copper product of the country. Michigan was third and Maryland fourth.

**LEAD SMELTING AND REFINING.**

Lead smelting and refining was the leading industry of 32 establishments, the aggregate capital of which was \$63,822,810. These establishments employed 7,573 wage-earners, paid \$5,374,691 in wages, consumed materials costing \$168,958,076, and manufactured products valued at \$185,826,839.

When compared with the corresponding figures given at the Census of 1900, those for 1905 show a decrease of 17.9 per cent. in the number of establishments, of 11.5 per cent. in capital, and of 9 per cent. in the average number of wage-earners; but, on the other hand, they show an increase of 5.6 per cent. in total wages, of 17.2 per cent. in cost of materials, and of 5.9 per cent. in value of products. The decrease in the number of active establishments, in capital invested, number of wage-earners and general operating expenses has all been in the West, for establishments east of the Mississippi show increases in these items.

The products of the lead smelting and refining industry consisted of 783,060,836 pounds of lead, valued at \$30,357,901, of 2,574,549 ounces of gold, valued at \$52,394,436, and of 72,592,987 ounces of silver, valued at \$41,425,114. As compared with the corresponding figures of 1900, those for 1905 show an increase in quantity of 33.2 per cent. for lead, of 2.4 per cent. for gold, and of 3.1 per cent. for silver. In value lead increased 20.6 per cent. and gold 1.9 per cent., but silver decreased 1.7 per cent. That the development of the precious metals did not keep pace with that of lead is not due to a decrease in the precious metal values of the argentiferous lead ores treated, but results from the large increase in the quantity of dry gold and silver ores treated by the copper smelters. This increase in the consumption of dry ores by the copper smelters has been at the expense of the lead smelters.

## The Iron and Steel Industry.

(From Census Bulletin No. 78.)

From 1900 to 1905 the number of establishments in the United States has decreased from 669 to 606. At the same time capital increased from \$590,539,484 to \$948,689,640; the average number of wage-earners, from 222,607 to 242,740; wages, from \$120,836,338 to \$141,439,906; the cost of materials used, from \$522,431,701 to \$620,171,881, and the value of products, from \$804,034,918 to \$905,854,152. The tonnage produced in 1905 was \$34,844,933, an increase of 18.1 per cent. since 1900.

### BLAST FURNACES.

There were, in 1905, 191 blast furnace establishments, 14.7 per cent. less than in 1900. The capital invested was \$239,539,194, an increase of 61.6 per cent. Materials cost \$178,967,449, 36.1 per cent. more than in 1900; the tonnage of products was 16,628,294, a gain of 15.1 per cent., and the value \$231,889,126, a gain of 12.1 per cent.

In the number of wage-earners there was a decline from 39,358 to 35,178 in 1905, due chiefly to the use of pig iron casting machines in place of sand casting and to improvements in charging devices and in ore handling machines for stocking and charging. The reduction in the labor factor through the improvements in equipment, as might be expected, is balanced by a corresponding increase in the capital invested. The investment in buildings, machinery, tools and implements in 1905 in active establishments averaged \$8.24 per ton of pig iron produced, as compared with \$5.48 per ton in 1900, an increase of 50.4 per cent.

### PIG IRON MANUFACTURED.

Considerable more pig iron was made with mixed coke and bituminous coal as fuel in 1905 than in 1900, and less with anthracite coal and with mixed anthracite coal and coke. The quantity of charcoal pig iron, although greater than in 1900, was relatively small. Bessemer and low-phosphorus, of which there were 8,894,584 tons and 192,795 tons, respectively, together formed 54.7 per cent. of all pig iron produced in 1905. Basic pig iron to the amount of 2,553,940 tons, 17.4 per cent. more than in 1900, formed 15.4 per cent. of the total, and foundry pig, 3,679,243 tons, formed 22.1 per cent. of the total. None of the remaining grades reported—malleable, Bessemer, forge, white and mottled, and miscellaneous grades, ferrosilicon, spiegeleisen, ferromanganese, and direct castings—formed as much as 4 per cent. of the total.

### IRON FOR STEEL MAKING.

Iron for steel making—comprising Bessemer, low-phosphorus, basic, ferrosilicon, spiegeleisen and ferromanganese—aggregated 11,921,578 tons, an increase of 23.4 per cent. over the production of like grades in 1900. The major part of the pig iron product—8,926,545 tons, or 59.7 per cent.—was made by establishments controlling steel works and rolling mills for consumption therein. After deducting this and the quantity purchased from independent establishments by steel works and rolling mills—2,264,683 tons—there remains out of the total pig iron production 16,628,294 tons—4,437,066 available for foundries, other industries, etc.

With the development of the Bessemer and open-hearth processes there has resulted the practice of retaining the blast-furnace metal in molten condition. Casting machines have also been extensively introduced, and to a small extent the practice of chill casting or casting on an iron floor. Of all pig iron made, 6,083,513 tons were sand cast, 5,898,744 tons were delivered in molten condition to Bessemer converters, open-hearth furnaces, etc., 4,307,108 tons were machine cast, 329,460 chill cast, and 9,469 were direct castings.

The most important improvement of late years in the blast furnace industry is the Gayley dry-air blast, which, by eliminating the effect of the moisture of the air and its tendency to consume heat energy, results in the following economies: a reduction of some 20 per cent. in the fuel consumed per unit of pig iron; increase in the capacity of the furnace; reduction in iron ore waste (dust), and control over silicon range. There is also, incidentally, a saving in power.

### STATES PROMINENT IN THE PIG IRON INDUSTRY.

In 1905 there were active blast furnaces in twenty States. Pennsylvania is still far in advance of the other States as a producer of pig iron. Ohio, Illinois and Alabama follow, in the order named. All but three of the States which had more than two blast furnace establishments in 1905 reported increases in pig iron production. Pennsylvania produced one-half of the Bessemer pig iron, nearly three-fourths of the low-phosphorus, nearly three-fourths of the basic, over one-fifth of the foundry, more than one-half of the forge, over three-fifths of the spiegeleisen, all of the ferromanganese, nearly one-third of the direct castings, and relatively small amounts of the remaining grades—malleable Bessemer, white and mottled, and miscellaneous grades, and ferrosilicon.

### STEEL WORKS AND ROLLING MILLS.

The number of active steel works and rolling mills for which separate reports were received was 415, a decrease of 23 from the number in 1900. The capital invested in these establishments was \$709,130,646, an increase of 60.5 per cent. since 1900; the amount invested in idle establishments was \$21,247,646. The average number of wage-earners and wages were, respectively, 207,562, a gain of 13.4 per cent., and \$122,491,993, a gain of 19.8 per cent. The cost of materials used was \$441,204,432, and the value of products, \$673,965,026; the gain was 13 per cent. in both. The total tonnage of products was 18,216,639, an increase of 21.1 per cent., compared with an increase in the decade preceding of 103.6 per cent.

Pennsylvania continues to produce more than one-half of the cast steel and rolled iron and steel products, its output constituting 54 per cent. of the total value, compared with 55.7 per cent. in 1900. This State reports one-half of all employees and expenses pertaining to the industry, and over one-half the capital. Its present share of the steel making and rolling mill industry is even greater than its share in the blast furnace branch, and exceeds by over \$30,000,000 the total product of steel works and rolling mills for the entire country in 1890. Ohio ranks second, Illinois third, and New York fourth.

**The Tobacco Industry in the United States.**

(From Census Bulletin No. 87.)

Census statistics of the manufacture of tobacco appeared first at the Census of 1810. The classifications were "American Cigars," "Spanish Cigars," and "Tobacco and Snuff." No totals were presented for the entire country, but the returns for Pennsylvania gave a total of 3,898,999 Spanish cigars, valued at \$26,550; 20,061,000 American cigars, valued at \$44,253, and 2,186,757 pounds of tobacco and snuff, having a value of \$410,910. For Virginia were returned 2,726,713 pounds of tobacco and snuff, of a value of \$469,000. At the Census of 1840, out of thirty States and Territories the manufacture of tobacco was reported for twenty-eight, the total value of products as shown in the recapitulation being \$5,819,568, of which Virginia reported \$2,406,671.

**GROWTH SINCE 1850.**

The returns at the Census of 1850 were for "tobaccoists." The value of products was reported as \$13,491,147, of which \$5,157,652 was from Virginia; the number of establishments in the United States was 1,418; the capital, \$5,008,295; the number of wage-earners, 14,236, of which 1,975 were females; the cost of labor, \$2,420,208, and of materials, \$7,341,728.

The enormous growth of the industry since 1850 is indicated by the fact that the value of products for the year covered by the Census of 1905 was \$331,117,681, the capital employed being \$323,983,501. In the same year the industry expended \$126,088,608 for materials, \$62,640,303 for wages, \$8,800,434 for salaries, and \$80,145,016 for miscellaneous expenses.

The value of products increased 25.6 per cent. for 1905, as compared with 1900; the cost of materials, 35.8 per cent., and the amount paid in wages, 30.6 per cent. The reported capital shows an increase of 190.5 per cent.

**NUMBER OF WAGE-EARNERS.**

The number of wage-earners employed in 1905 in this industry was 159,408. This represents the average number employed during the year and includes 85,691 men, 66,301 women, and 7,416 children under sixteen years of age. The proportion of women comprised in the total has greatly increased in recent years. In 1880 only 23.1 per cent. of the total number of wage-earners in this industry were women. This proportion increased to 29.8 per cent. in 1890, 37.2 per cent. in 1900, and 41.6 per cent. in 1905.

Of the reported aggregate value of products, cigars and cigarettes form 64.7 per cent. and chewing and smoking tobacco and snuff 35.3 per cent. Of the total number of wage-earners 85 per cent. were employed in the manufacture of cigars and cigarettes. The number of establishments reported as engaged in the manufacture of cigars and cigarettes was 16,395, while the number reported for the other branch of the industry was only 433. This striking difference is due in part to the fact that cigars and cigarettes are to a considerable extent manufactured in small establishments, whereas chewing and smoking tobacco and snuff is mostly produced in factories of considerable size. For the cigar and cigarette branch of the industry the average capital invested per establishment was only \$8,852, while for the other branch it was \$413,043. A similar contrast appears in the average number of wage-earners per establishment, the number being 8 for cigars and cigarettes and 55 for chewing and smoking tobacco and snuff.

**TOBACCO CONSUMED.**

According to the reports of the Commissioner of Internal Revenue, the total amount of tobacco manufactured in 1904 was 448,511,583 pounds, the quantity used in the manufacture of cigars and cigarettes being 141,020,029 pounds, as compared with 307,491,554 pounds used for the production of chewing and smoking tobacco and snuff. As reported by the Census, the value of the raw materials—mostly tobacco—used in the manufacture of cigars and cigarettes (\$69,291,011) was more than twice the value of that consumed in for cigars and cigarettes and 55 for chewing and smoking tobacco and snuff.

**PRODUCTION OF CIGARS AND CIGARETTES.**

According to figures derived from the reports of the Commissioner of Internal Revenue, the number of cigars manufactured in the calendar year 1904 was 7,376,669,742, and the number of cigarettes was 3,433,993,422. As compared with the year 1900, this shows an increase of 19.4 per cent. in the manufacture of cigars and of 5.4 per cent. in the manufacture of cigarettes. The Census Bulletin calls attention to the fact that the number of cigars and cigarettes consumed increased 27.5 per cent. between 1900 and 1905, and that between 1860 and 1905 the consumption of cigars increased nearly sevenfold, while the population in the same period increased only a little over twofold.

**PRINCIPAL PRODUCING STATES.**

The manufacture of cigars and cigarettes is one of the few factory industries that are represented in every State and Territory. The production ranges in value from \$9,310 (reported for the State of Mississippi) to \$60,623,617, reported for New York. The production in New York represents in value 28.3 per cent. of the total production (214,350,051) of the United States. There were four other States for which the reported value of products exceeded \$10,000,000. These States, with the value of product, were as follows: Pennsylvania, \$39,079,122; Florida, \$16,764,276; Ohio, \$13,241,230, and Illinois, \$11,669,485. As compared with the Census of 1900 a very noteworthy increase in the value of product is shown for the State of New Jersey, in which the production increased from \$2,647,395 for 1900 to \$8,331,611 in 1905. This increase was due chiefly to the establishment of a number of large cigar factories, most of which were owned by one corporation. As a result, New Jersey advanced from the twelfth place in 1900 to the sixth at the Census of 1905.

The production of chewing and smoking tobacco and snuff is confined to a smaller number of States than that of cigars and cigarettes. The total production reported for the United States is \$116,467,630.

**The Production of Agricultural Implements.**

(From Census Bulletin No. 75.)

The report of the Census Bureau upon the production of implements used in agriculture in the United States in 1905 covered those used for tilling the soil, sowing or planting the seed, harvesting, and preparing the crop for the market. The industry, associated as it is with progress in farming methods, has exercised a far-reaching influence upon the country's economic conditions. The advance from the simply constructed implements of former years to the complex machines of the present time has been accompanied by an inevitable increase in capital. In value of products the increase in the last twenty-five years has been moderate, but steady. The following figures show the general items to be considered in making a study of the industry: Number of establishments in 1905, 648; capital, \$196,740,700; number of salaried officials, clerks, etc., 7,199; salaries, \$7,572,646; average number of wage-earners, 47,394; total wages, \$25,002,650; miscellaneous expenses, \$15,178,098; cost of materials used, \$48,281,406; value of products, \$112,007,344.

The area of the greatest production falls in the North Central and North Atlantic divisions of States. Both in 1900 and 1905 the predominance of the North Central was very marked. In 1905, 57.6 per cent. of all establishments were in this division, 80.6 per cent. of the total capital, and 76.1 per cent. of the total value of products. In 1900 the proportional number of establishments was the same, and the percentages of the total capital and value of products were, respectively, 70.7 and 80.1 per cent. Ranked in the order of the value of products, the leading States are: Illinois, \$38,412,452; New York, \$13,045,891; Ohio, \$12,891,197; Wisconsin, \$10,076,760; Michigan, \$8,719,719, and Indiana, \$8,060,575. The three first States have held highest place since 1860, and in 1905 contributed 57.5 per cent. to the total value of products, Illinois alone contributing 34.3 per cent. Among the Southern States, Georgia has become a producing centre. California holds the same position among the Western States.

New centres of the manufacture have appeared since 1900 in Iowa, Kansas, Minnesota and Tennessee.

**PRODUCTS.**

Of the four main classes of articles manufactured in establishments of the agricultural implement industry, implements of cultivation and harvesting are the most important, with a value of \$30,607,960 and \$30,862,435, respectively; the miscellaneous class ranks next, with \$19,534,114, followed by seeders and planters, \$11,225,122, and seed separators, \$6,639,883. It is from harvesting implements that Illinois derives supremacy in the industry, although this State also leads in value of products of implements of cultivation. New York and Illinois produced 73.6 per cent. of the total value of harvesting implements manufactured.

The output of scythes has decreased steadily since 1880. The demand for the hoe remains steady, the output of 1905 (331,620 dozens) showing an advance of 54,447 dozens since 1900.

**The Production of Glass in the United States.**

The Census Office made a report in 1907 on the manufacture of glass in the United States, classified as (1) building glass—common window glass, plate glass, and all varieties of cast and rolled sheet glass; (2) pressed and blown glassware—tableware, tumblers, goblets, lamps, chimneys, lantern globes, gas and electric lighting ware, cut glass, etc., (3) bottles and jars in flint, green and amber glass.

The following is a summary statement of aggregate manufacture in the year 1905: Number of establishments, 399; capital invested, \$89,389,151; wage-earners, average number, 63,969; total wages, \$37,288,148; cost of material used, \$26,145,522; value of products in the year, \$79,607,998.

**DEVELOPMENT OF THE INDUSTRY.**

While there has been a marked advance in the glass industry since 1850, the development has been in the quality of the glass produced, rather than in the further adaptation of glass to commercial uses, or, until recently, in improvements in the manufacturing process. For many years the industry did not extend beyond the manufacture of window glass, tableware and bottles, and the methods of making these were practically the same as those used by the early glassmakers. A few years ago nearly all the articles made, except plate glass, were produced by skilled artisans, practically no machinery being employed in the manufacture. The principal item of expense in glass manufacture was, therefore, the cost of this skilled labor. Although some important improvements, which promise further changes in the methods of manufacturing various glass articles, have been introduced during the census year, they are of too recent origin to affect the statistics.

**CHEAPER PRODUCTION.**

Since 1900 the glass manufacturers in the United States have made vast strides in the direction of cheaper production. Machines for mechanical manipulation in the production of window glass, for manufacturing narrow-necked bottles, and for conveying ware are some of the latest contributions to the industry. Some of these machines were perfected during the census year, and are now in active operation, but their influence on the industry was slight during 1904, as their operation in that year was more or less an experiment.

**BUILDING GLASS.**

In the manufacture of building glass the States of Pennsylvania and Indiana ranked first and second, respectively, in value of products, capital, and number of establishments; Ohio was third in value of products and capital, and, with New York, fourth in number of establishments; West Virginia was fourth in value of products, fifth in capital, and third in number of establishments; Missouri was fifth in value of products, fourth in capital, and, with New Jersey and Illinois, seventh in number of establishments; New York was sixth in value of products and capital, and, with Ohio, fourth in number of establishments; Kansas was seventh in value of products and capital, and sixth in number of establishments.

**EXPORTS OF COTTON FROM THE UNITED STATES.**

(From Census Bulletin No. 23.)

The exports of domestic cotton from the United States during the year ending August 31, 1907, amounted to 9,036,434 bales of 500 pounds each. Of this amount 3,966,110, or 44 per cent., went to the United Kingdom; 2,315,651, or 26 per cent., to Germany, and 1,006,633, or 11 per cent., to France. During the twenty-six years from 1880 to 1906 the exports to the United Kingdom increased 45 per cent., those to Germany nearly 400 per cent., and those to France 82 per cent. The exports to Italy increased from 75,145 bales in 1880 to 567,916 bales in 1906, or nearly sevenfold. Exports to Japan are noteworthy because of the remarkable variations in the quantities for the different years, as well as for the growth in these exports since 1890, which is the first year for which they are presented in the report. In 1906 they amounted to 262,283 bales, while for 1904 they were 336,575 bales. The exports to Russia decreased, a fact which may be partially explained by the increased production of cotton in Russian territory, by the importation of Persian cotton, and by the recent unsettled conditions in that country.

Exports of sea-island cotton formed about one-third of the 57,550 bales reported by the ginners as produced in 1906. In 1905 about 36 per cent. of the sea-island crop was exported. The United Kingdom takes about three-fourths of the amount exported, while most of the remainder goes to France.

**EXPORTS OF COTTON MANUFACTURES.**

The total value of exports of cotton goods of domestic manufacture was \$32,305,412, of which \$11,496,734, or 36 per cent., was for unbleached cloths; \$2,240,431, or 7 per cent., for bleached cloths, and \$7,568,247, or 23 per cent., for dyed, colored, or printed cloths. Of the total value of cotton manufactures exported \$4,425,055, or 14 per cent., went to Europe; \$14,821,264, or 46 per cent., to North and South America; \$12,325,874, or 38 per cent., to Asia, and the remainder to Africa. The export of American yarns to the Far East is insignificant, as that market is controlled by British India and Japan.

**IMPORTS OF COTTON MANUFACTURES.**

Imports of cotton manufactures during the year ending June 30, 1907, were valued at \$73,704,636, more than one-half of which consisted of laces and embroideries. Switzerland leads in the export of laces to this country with \$13,979,808, or about one-third of the total. France was second with \$12,484,906. Of the bleached, dyed, or printed cloths imported 79 per cent. came from the United Kingdom, which country also supplied more than three-fourths of the thread, yarn, and warps imported. Practically all of the imports of hosiery and knit goods, amounting in value to \$8,671,848, came from Germany.

**THE UNITED STATES SUPPLIES TWO-THIRDS OF THE COTTON.**

The number of cotton spindles in the world, as shown by the report, is 123,332,971. As nearly as it can be determined, the amount of cotton consumed was 19,493,441 bales, a weekly consumption of 374,874 bales. This is not, however, the total consumption for the world, as in a number of Eastern countries and in South and Central America large quantities of cotton are grown and consumed which do not enter into commercial channels, and therefore cannot be estimated with any certainty. The figures indicate, however, that the United States furnished two-thirds of the supply of the world.

## WOOL MANUFACTURES.

(From Census Bulletin No. 74.)

The period intervening between the censuses of 1900 and 1905 was an unusually prosperous season for the industries which use wool as chief raw material, namely, Woollen goods, worsted goods, carpets and rugs, other than rag; felt goods, and wool hats. The 1,213 establishments engaged in wool manufacture in 1905 were distributed thus: Woollen goods, 792; worsted goods, 226; carpets and rugs, 139; felt goods, 39, and wool hats, 17. The total capital invested was \$370,861,691. There was an increase in every industry except wool hat manufacture, where there was a decrease of 19.7 per cent. The average number of wage-earners in the several industries was 179,976. Materials used in the wool manufacture cost \$242,561,096.

The total value of products, \$380,934,003, is made up of the output of woollen mills, \$142,196,658; of worsted goods factories, \$165,745,052; of carpet and rug factories, \$61,586,433; of felt goods factories, \$8,948,594, and of wool hat factories, \$2,457,266.

Massachusetts held first rank in the total value of products of all branches, and in value of worsted goods and woollen goods; Pennsylvania was first in the manufacture of carpets and rugs, and New York led in the manufacture of felt goods and wool hats. The cities of Philadelphia, Pa.; Lawrence, Mass., and Providence, R. I., are still the leading centres of wool manufacture.

In 1905 the worsted manufacture exceeded that of woollen goods in capital, cost of materials, and value of products. An indication of the change of fashion from woollen to worsted goods is the decrease in woollen yarn purchased from 38,903,178 pounds in 1900 to 38,141,488 pounds in 1905, coincident with an increase in worsted yarn from 34,377,736 pounds in 1900 to 43,403,705 in 1905. The quantity of scoured wool consumed in the woollen manufacture was 282,194,618 pounds, and the total quantity of yarns purchased was 203,079,791 pounds, costing \$59,904,637. Cotton, either alone or mixed with wool, has largely supplanted wool as the material of a great number of fabrics. There are important increases in the silk yarn used and in the yarn of jute, ramie, and other vegetable fibres.

The principal machinery was 5,968 cards, 1,549 combing machines, 4,021,098 spindles, and 77,985 looms.

**Sugar Production.**

Canada (1903).....	23,969,000
Netherlands.....	8,778,000
Germany.....	6,903,000
France.....	2,440,000

The number of pounds of tea consumed per capita was: Great Britain and Ireland, 6.09; United States, 1.34; Russia, 0.95; Australia, 6.93; Canada, 5.60; France, 0.06; Germany, 0.12. The imports of tea in the United States in the fiscal year 1907 were 86,362,400 pounds, valued at \$13,915,544. Of this 37,411,053 pounds were imported from Japan and 31,233,259 pounds from China.

**Cocoa.**—World's production of cocoa, 1903, in pounds: Ecuador, 46,500,000; San Thomé (Portuguese Africa), 45,000,000; Brazil, 43,000,000; Trinidad, 29,000,000; Venezuela, 25,000,000; Santo Domingo, 15,000,000; Grenada, 13,000,000; all others, 37,500,000. Total production, 280,000,000.

World's consumption of cocoa, 1903, in pounds: United States, 63,000,000; Germany, 43,000,000; France, 41,000,000; Great Britain, 35,000,000; Netherlands, 33,000,000; Spain, 12,500,000; all others, 33,000,000.

The importation of raw cocoa into the United States in the fiscal year 1907 was 92,249,819 pounds, and of chocolate 3,541,961 pounds. There has been an immense increase in the importation of cocoa in the past ten years.

**Spread of the Liquor Prohibition Movement.**

The year 1907 witnessed a tremendous advance in the United States in the movement to prohibit the sale of intoxicating liquors. It was practically the only political issue in the South.

There are now six prohibition States—Maine, Georgia, North Dakota, Kansas, Oklahoma and Alabama. In eight States and Territories—Montana, Idaho, Wyoming, Nevada, Utah, Colorado, Arizona, and New Mexico—saloons are licensed with virtually no restrictions, although some of these have recently passed Sunday closing laws. In all the other States there is some form of local option. In nearly all these local option States the "dry" territory has been steadily increasing in the last ten years. In the South as a whole it has doubled; in Texas it has tripled; in Kentucky it has spread so widely that the prediction is confidently made that within three years the State will take its place beside Georgia and Alabama in the prohibition column. To-day 97 out of the 119 counties of Kentucky are wholly "dry," and of the remainder only four are wholly "wet." Governor Willson was elected in November on a prohibition platform. This seems an extraordinary condition for Kentucky, the home of blue-grass whiskey, the State in which \$100,000,000 is invested in distilleries.

In Tennessee liquor can be had publicly only in the cities of Memphis, Nashville, and Chattanooga.

Georgia becomes a prohibition State on January 1, 1908, and the law is so drastic that wine cannot be used at communion services in churches, nor can druggists sell any form of liquor except pure alcohol.

Alabama by act of the Legislature in November, 1907, became a prohibition State.

In Mississippi sixty-eight out of seventy-five counties are already dry, and a State prohibition campaign is being waged with every prospect of success.

Florida has thirty-four of its forty-seven counties dry, and Governor Broward is actively leading a campaign for State prohibition.

South Carolina recently repealed its famous dispensary law and substituted local option by counties. A movement for State prohibition has been started, and seventeen out of forty-one counties have voted for no saloons.

North Carolina has no saloons in 95 per cent. of its territory, and the prohibition campaign is active under the lead of Governor Glenn.

Virginia has seventy-two dry counties out of 118.

West Virginia has thirty out of fifty-five, and Governor Dawson is actively fighting the liquor traffic.

Fourteen of Maryland's twenty-three counties are dry.

In Delaware the election in November, 1907, resulted in two of the three counties going dry.

Louisiana has eighteen dry parishes and parts of others are also dry, and it is illegal to solicit orders for liquor in any of the dry districts.

Arkansas has sixty out of seventy-five counties dry and many dry towns in the others.

Missouri's local option law has made forty-four of her 115 counties abolish saloons. Sunday closing even in St. Louis is rigorously enforced.

Texas is one of the most notable examples of the revolution, for 147 counties are absolutely dry, fifty-three are partly dry and only forty-seven are totally wet. The sale of liquor on dining-cars is forbidden, and a traveller on a train may not even drink from his own flask.

Oklahoma has just adopted a constitution that forbids the sale of liquor.

Kansas is a prohibition State, and the last of the "speak easy" saloons has just been suppressed by popular opinion.

Nebraska has local option by villages and cities; 400 are dry, 600 wet.

South Dakota is about one-quarter dry.

North Dakota has been a prohibition State so long that in some of the counties there are no jails.

Minnesota has 123 dry towns and rigid Sunday closing.

Iowa, once a prohibition State, has sixty-five out of ninety-nine counties dry and eleven other counties have only one saloon each.

Wisconsin has 650 dry towns.

Michigan, under a county option law, has only one dry county.

A prohibition wave is rolling through Illinois, and more than 3,000,000 people are in the dry district.

Six hundred and eighty of Indiana's 1,016 townships are dry, and the prohibition advocates expect to increase the license fee to \$1,000.

In Ohio 1,140 out of 1,376 townships are dry and 60 per cent. of the municipalities.

Pennsylvania seems little affected by the temperance wave, but there is one dry county. New Jersey has no local option, but has recently begun a vigorous closing of saloons on Sundays.

New York has township option, under which 602 towns in the State have no saloons.

Only twenty-four towns in Vermont allow liquor to be sold.

New Hampshire is nominally a prohibition State, but only 62 per cent. of the population lives in really dry territory.

Massachusetts has 250 dry and 100 wet towns.

Connecticut has ninety-six dry towns out of 176, and every saloon must be run by its actual owner.

About half of Rhode Island is dry.

In Colorado, New Mexico, and Arizona the Anti-Saloon League has started a campaign that has already resulted in the passage of a local option law in the first-named State.

In Montana, Idaho, Wyoming, and Utah, although the saloons run about as they like, they are beginning to realize that sentiment is changing. The Mormon Church is fighting them, and the prohibition people have already persuaded Idaho to adopt a Sunday closing law.

On the Pacific Slope, California has four dry counties and much dry territory in the others, while in Oregon twelve counties are dry and 170 municipalities in the 21 wet counties are also dry. Washington has fifty dry towns.

## The Canning and Preserving Industry.

(From Census Bulletin No. 61.)

Of the total value of products of the canning and preserving industry for the United States, amounting to \$108,505,471 in 1905, the largest item was canned vegetables, the value of which was \$45,262,148, or 41.7 per cent. of the total. Canned and dried fruits were next, with a value of \$27,308,826. The value of fish amounted to \$25,547,075, of which canned fish amounted to \$16,983,779, smoked fish to \$2,362,740, and salted fish to \$6,200,556. The value of oysters canned was \$3,799,412.

The following is a summary statement of the canning and preserving industry in the United States in 1905: Number of establishments, 2,703; capital, \$70,082,076; number of salaried officials, clerks etc., 3,624; salaries, \$3,236,138; wage-earners, average number, 50,238; total wages, \$14,218,170; miscellaneous expenses, \$8,590,984; cost of materials used, \$70,058,686; value of products, \$108,505,471.

Although some establishments, at which fruits and vegetables are packed during the Summer and oysters during the Winter, are running the greater part of the year, the strict fruit and vegetable canning establishments are operated only during a part of the year. The time in operation varies according to the locality and the kind of goods packed. While some plants are able to commence the canning of early peas and small fruits in the latter part of May, and others continue the packing of apples into December, the busy season for most comes during the months of July, August, September and October, September being the month of greatest activity. A comparatively small number of operatives are also employed during the Winter months in labelling, wrapping and packing—preparing the product for shipping—and in many factories where they manufacture their own cans the can-makers are employed throughout the year.

The canning of vegetables is the most important branch of the canning industry, forming 36.1 per cent. of the total value of products in 1900, and 41.7 per cent. in 1905. In the value of products for this part of the industry Maryland ranked first and New York second, both in 1900 and 1905. Indiana was fourth in 1900 and third in 1905; Illinois was sixth in 1900 and fourth in 1905, and California dropped from third in 1900 to eighth in 1905.

The climatic conditions in Southern California have made the State famous for the fine quality of its fruits. The natural outcome has been to give this State first rank in the value of both canned and dried fruits produced. In 1900 California produced 64.9 per cent. of the total value of canned and 61.2 per cent. of the total value of dried fruits reported in the United States. In 1905, 59.9 per cent. of the total value of canned fruits for the country was reported from this State, while its percentage of the total value of dried fruits was increased to 88.1 per cent. of the total for the country. Maryland held second rank in the value of fruit canned, and New York ranked third in value of canned and second in value of dried fruits.

Mississippi led all the other States in value of oysters canned in 1905, producing \$1,502,497. The other three leading States, ranked according to value of products, were: South Carolina, \$568,239; Louisiana, \$509,325; Georgia, \$256,750.

## Mortality Statistics.

THE Census Office published in 1906 a report of Mortality Statistics of States and cities which have laws or ordinances requiring the registration of deaths. It covered the years 1900 to 1904, inclusive, and in 1904 represented a population of 32,996,989. The total number of deaths reported was 551,354, the rate per 1,000 of the population being 16.7. But ten States and the District of Columbia with certain cities were included in the Registration Area. The Census enumeration of 1900, which follows, covered the whole United States so far as returns could be obtained.

The Census year ended May 31, 1900.

In the summaries of the results the data are classed as "registration" and "non-registration," according to the source from which the original returns were obtained. The non-registration class includes the areas in which the deaths were reported by the enumerators, and those areas in which registration was too defective to be accepted.

The average age at death in 1890 was 31.1 years, in 1900 it was 35.2 years.

MORTALITY STATISTICS—Continued.

**Statistics of Homicide.**

In the Independent of April 11, 1907, James Edgar Bisun contributed the following statistics of homicide in principal countries of the world: Josiah Strong's "Social Progress" for 1906 gives the following table of homicides and the annual average:

	Tried.	Con- victed.		Tried.	Con- victed.		Tried.	Con- victed.
Italy .....	3,606	2,805	England .....	318	151	Hungary .....	...	625

France .....	847	580	Scotland .....	60	21	Germany .....	567	476
Belgium .....	132	101	Spain .....	1,584	1,085			

The average number of murders in the United States annually during the past twenty years, from 1885 to 1904, was 6,597. In 1896 the murders reached high-water mark, 10,662, and in 1895 there were 10,500. In Germany the convictions equalled 95 per cent. and a fraction; in the United States, 1.3 per cent.

In this connection, the nationalities of the homicides in the United States will be of interest. August Drahm gives the following: Native white, 42.94 per cent., foreign born, 16.50 per cent., negroes, 37.12 per cent., Chinese and Japs, 1.28 per cent.; civilized Indians, 1.21 per cent.

**HOMICIDE IN THE UNITED STATES.**

The statistics of the United States Census for 1900 had not been published by the Census Office when THE WORLD ALMANAC for 1908 was ready for the press. The special report of the Census Office is in course of preparation. The latest official statistics, therefore, are for 1890.

The census bulletin presenting statistics of homicide in the United States in 1890 was prepared by Frederick H. Wines, special agent on pauperism and crime. The following is the summing up of the results of his investigations:

Of 82,329 prisoners in the United States June 1, 1890, the number charged with homicide was 7,386, or 8.97 per cent.

Omitting 35 who were charged with double crimes, 6,958 of them (or 94.65 per cent.) were men, and 393 (or 5.35 per cent.) were women.

As to color, 4,425 were white, 2,739 negroes, 94 Chinese, 1 Japanese, and 92 Indians.

As to the nativity of the 4,425 whites, 3,157 were born in the United States, 1,213 were foreign born, and the birthplace of 55 is unknown.

The number employed at the time of their arrest was 5,659; unemployed, 1,225; unknown, 467.

The habits of 973, in respect of use of intoxicating liquors, are not stated. The remaining 6,378 are classed as follows: Total abstainers, 1,282; occasional or moderate drinkers, 3,829; drunkards, 1,267.

As to their physical condition, 6,149 were in good health, 600 ill, 283 insane, 24 blind, 14 deaf and dumb, 18 idiots, and 263 crippled.

The number of legal executions in the United States in the twelve years ending January 1, 1907, was 1,514.

## Prisoners in the United States.

The Census Office published in 1907 a special report on prisoners and juvenile delinquents in institutions in the United States. The enumerations are for 1904, when the census was taken. The following is a summary from the report:

The number of institutions in the United States June 30, 1904, was 1,337, classified as follows: United States civil prisons, 4; State prisons and State and County penitentiaries, 67; reformatories for adults, 14; County jails and workhouses, 1,181, municipal prisons and workhouses, 71.

Exclusive of the juvenile delinquents in special institutions for that class, and exclusive of persons imprisoned for the non-payment of fines, 81,772 sane persons at least five years of age were serving sentences in civil prisons on June 30, 1904. Out of every million persons in the estimated population of that date 1,006 were prisoners.

Possibly the greater leniency in the present treatment of the criminal affects the female offenders more than the male, for the proportion of women among prisoners has constantly decreased. In 1880 women formed 8.5 per cent. of the prisoners; in 1890, 7.8 per cent.; and in 1894, 5.5 per cent. The decrease between 1890 and 1904 is common to all sections of the country.

Colored persons were more common among the prisoners on June 30, 1904, than they were on June 1, 1890. In 1904 the percentage of colored was 32.6, while in 1890 it was 30.4. This increase in the proportion of colored prisoners is shown by all the geographic divisions of the country except the South Atlantic and the Western. It was particularly notable in the North Central States, where 14.2 per cent. of the prisoners enumerated in 1890 were colored as contrasted with 20.5 per cent. in 1904.

### MINOR OFFENCES MOST COMMON.

In the country as a whole 34,753 persons were sentenced for drunkenness, 28,339 for vagrancy, and 17,264 for disorderly conduct. In other words, more than one-half of the total number of prisoners committed during the year were sentenced for some one of these three closely allied offences. No less than 25,098 prisoners (16.8 per cent. of the total number) were sentenced for larceny; 10,877 (7.3 per cent.) for assaults, and 7,161 (4.8 per cent.) for burglary. Of the remaining offences homicide showed the largest number—2,444, or 1.6 per cent. of the total.

### SHORT SENTENCES IMPOSED.

Since such a large proportion of the total number of prisoners had been committed for minor offences, it naturally follows that a large proportion were committed for short terms. In continental United States 42,755, or 28.6 per cent. of the total number, were sentenced to imprisonment for less than thirty days, and 97,750, or 65.4 per cent., for less than four months. The proportion of short sentences varies widely in different States, but this variation does not stand in as close relation to the proportion of minor offenders as might be expected. The figures, in fact, indicate wide divergences between different States in the length of sentence imposed for similar offences.

### DEATH SENTENCES.

Of the 106 persons committed to prison under death sentence 99 had been convicted of homicide, 4 of assaults, 2 of rape, and 1 of a double crime, murder being one of them. Two women paid the death penalty for homicide.

Life sentences were imposed upon 640 prisoners, of whom 586 were convicted of homicide, 28 of rape, 12 of burglary, 4 of robbery, 3 of larceny, 2 of arson, 1 of assault, 1 of the crime against nature, 1 of perjury, 1 of an unclassified crime against property, and 1 of a crime not stated. Twenty women were committed during 1904 on a life sentence.

### CRIMINALITY OF COLORED.

Among the 149,691 prisoners committed during 1904, 125,093 were white and 24,598 colored, of whom 186 were Mongolians and 714 Indians. In other words, 16.4 per cent. of the total number of prisoners committed during the year were colored. Of the general population in 1900 the colored formed only 12.1 per cent. Since it cannot be presumed that the proportion of colored in the population increased materially between 1900 and 1904, it is evident that the colored contributed to the prison class in excess of their representation in the general population. This condition is not confined to any one section of the country, for the figures show that it obtained in every State and Territory, except North Dakota and Arizona, where the colored population is composed chiefly of Indians.

The colored, moreover, formed a larger percentage of the prisoners convicted of the more serious crimes than they did of those who had been sentenced for the lesser offences. They formed 31.5 per cent. of the major offenders and only 13 per cent. of the minor.

### CRIMINALITY OF FOREIGN BORN.

Of the white prisoners of known nativity 35,093, or 28.8 per cent., were foreign born. The figures for the separate nationalities of foreign born show that persons born in Austria, England, and Wales, Ireland, Italy, Mexico, and Scotland formed a larger proportion of the foreign born prisoners committed during 1904 than of the total foreign born population in 1900. This was not true of the persons born in Canada, Denmark, France, Germany, Hungary, Norway, Poland, Russia, Sweden, and Switzerland. The last mentioned group of countries furnished 53.8 per cent. of the foreign born population of 1900, but only 36.5 per cent. of the foreign born prisoners committed during 1904, while the first mentioned group included 35.3 per cent. of the population and 59.3 per cent. of the prisoners.

### The Defective Classes.

**The Insane.**—The total number of insane in the United States on June 1, 1890 (Census of the United States), was 106,485, of whom 74,028 were in hospitals. In the collection of statistics of the insane in 1903 (Census Special Report issued August, 1906), only the insane in hospitals were considered. These had increased to 150,151 on December 31, 1906. The number of hospitals for the insane had increased in thirteen years from 162 in 1890 to 328 in 1903.

In 1903 the number of insane males in hospitals was 78,523, and insane females 71,628. In proportion to population there were more white than negro insane. None of the insane in hospitals were under twelve years of age. The maximum concentration occurred between ages twenty-five and thirty-five years. Female insane live longer than male insane, and white insane than negro insane.

More than one-fourth, 27.8 per cent. of the hospital insane had been inmates less than one year, less than one-sixteenth per cent. had been in hospitals at least twenty years. 41.6 per cent. had been employed as laborers and servants before becoming inmates, 22.5 per cent. had been occupied in agriculture, transportation and other outdoor pursuits, and 16 per cent. in manufacturing and mechanical industries. Of the 328 hospitals for the insane, 226 were public and 102 private in character. The annual cost of maintenance of insane in public hospitals approximated \$21,000,000.

**The Feeble-Minded.**—The number of feeble-minded in institutions on December 31, 1903, was 14,347. The Census estimate of the number of feeble-minded in the general population is not less than 150,000. Of the feeble-minded in institutions 58 per cent. were under twenty years of age, and 85 per cent. were under thirty years of age. Three-fifths of the inmates were epileptics.

**The Deaf and Dumb.**—The total number of deaf mutes in the United States on June 1, 1890 (the latest Census returns on the subject), was 40,592—whites, 37,447; negroes, 3,115; others, 30; males, 22,429; females, 18,163; native-born whites, 33,278; foreign-born whites, 4,169.

The number of persons so deaf as to be unable to hear loud conversation on June 1, 1890, was 121,178, of whom 80,611 were able to speak. The latter were 49,278 males, 31,338 females, 77,303 whites, 3,308 negroes.

**The Blind.**—The total number of blind in the United States on June 1, 1890, was 50,568—whites, 43,351; negroes, 7,060; others, 157; males, 28,080; females, 22,488; native-born whites, 34,205; foreign-born whites, 9,146. The number of blind in one eye only was 93,938.

The number of insane persons in Great Britain and Ireland in 1896, according to Mulhall, was 128,896, or 328 per 100,000 population; Austria (1890), 51,880; Hungary (1890), 28,158. The number of insane in Germany in 1884 was 108,100; France, 93,900; Russia, 80,000.

### Suicides.

In European cities the number of suicides per 100,000 inhabitants is as follows: Paris, 42; Lyons, 29; St. Petersburg, 7; Moscow, 11; Berlin, 36; Vienna, 28; London, 23; Rome, 8; Milan, 6; Madrid, 3; Genoa, 31; Brussels, 15; Amsterdam, 14; Lisbon, 2; Christiania, 25; Stockholm, 27; Constantinople, 12; Geneva, 11; Dresden, 51. Madrid and Lisbon show the lowest, Dresden the highest figure.

The average annual suicide rate in countries of the world per 100,000 persons living is given by Barker as follows: Saxony, 31.1; Denmark, 25.8; Schleswig-Holstein, 24.0; Austria, 21.2; Switzerland, 20.2; France, 15.7; German Empire, 14.3; Hanover, 14.0; Queensland, 13.5; Prussia, 13.3; Victoria, 11.5; New South Wales, 9.3; Lavana, 9.1; New Zealand, 9.0; South Australia, 8.9; Sweden, 8.1; Norway, 7.5; Belgium, 6.9; England and Wales, 6.9; Tasmania, 5.3; Hungary, 5.2; Scotland, 4.0; Italy, 3.7; Netherlands, 3.6; United States, 3.5; Russia, 2.9; Ireland, 1.7; Spain, 1.4. A later enumeration of suicides in France gives 8,926 as the number in 1900, or 23.6 per cent.

The causes of suicide in European countries are reported as follows: Of 100 suicides: Madness, delirium, 48 per cent.; alcoholism, 11; vice, crime, 19; different diseases, 2; moral sufferings, 6; family matters, 4; poverty, want, 4; loss of intellect, 14; consequence of crimes, 3; unknown reasons, 19.

The number of suicides in the United States in the Census year 1900 was 5,498. The number of suicides in States and cities of the United States which have laws requiring the registration of deaths in the five years 1900 to 1904, inclusive, as reported in the Special Mortality Report of the Census Office, published in 1906, was 20,834. The methods of death by suicide in numbers, were: By poison, 6,946; firearms, 4,938; hanging, 3,232; asphyxia, 1,487; cutting, 1,171; drowning, 1,059; jumping from high places, 252; crushing, 87; other methods, 1,662. Insanity is the principal cause of suicide. The largest proportion of deaths by suicide, according to age, is from forty to forty-nine years. Summer appears to be the favorite season.

The number of suicides in fifty American cities in ten years, 1895 to 1905, inclusive, according to Frederick L. Hoffmann, statistician of the Prudential Insurance Company of New Jersey, was 26,079. The ten cities having the highest rate per 100,000 of the population were: San Francisco, 52.2; Hoboken, 30.2; St. Louis, 27.4; Oakland, 24.9; Chicago, 22.7; New York (Manhattan and Bronx), 22.2; Milwaukee, 21.8; Newark, 21.6; Cincinnati, 20.6; Indianapolis, 17.6. The average of fifty cities was 17.8. The number of suicides in New York (Manhattan and Bronx) in 1906 was 442 and in Chicago 385.

### Statistics of Births.

The Statesman's Year Book gives the following returns of births in 1900, in principal European countries. The birth registration, except in Germany, is not full. The Census returns of the United States for 1900 have not yet been published.

COUNTRIES.	Total Number of Births.	Number of Illegitimate Births.	COUNTRIES.	Total Number of Births.	Number of Illegitimate Births.
Austria .....	995,537	135,933	Germany .....	9,045,286	183,504

In "Statistique Humaine de la France," M. J. Bertillon presents the following table, showing that the French are the least prolific and the Germans the most prolific people of Europe: Number of children born alive annually per 1,000 women of 15 to 50 years: France, 102; Ireland, 114; Belgium, 127; England, 136; Netherlands, 137; Spain, 141; Prussia, 150; Bavaria, 156. The number of children born in France in 1904 was 818,229, the smallest number registered in late years. In August, 1906, Hanaw Kailua, in Hilo, Hawaii, gave birth to seven children; Mrs. Snell, of Malad, Idaho, on September, 19, 1889, gave birth to six children.

### Tampa Isthmian Canal Exposition of 1910.

AN Exposition of the Industrial arts will be held at Tampa, Florida, from January to May, 1910, inclusive, to commemorate the progress of the work on the Panama Canal. It was originally purposed to hold this Exposition in 1908, but the time was last year postponed to 1910, with the concurrence of Congress. The head of the Exposition project is Thomas J. L. Brown, President of the Florida Mid-Winter Fair Association, Tampa, Florida.

Congress on June 30, 1906, adopted the following joint resolutions.

"Whereas, it is fitting that the commencement of the work on the Panama Canal should be celebrated in a suitable manner to the end that the importance of this great isthmian waterway may be accentuated and the sentiment in favor of its early completion fostered and kept alive; and

"Whereas, the City of Tampa, in the State of Florida, by reason of its being farther to the southward and nearer to said canal than any other city in the country, having a deep and commodious harbor, reached by ample railroad facilities, as also on account of its salubrious climate and the spirit of American progress among its citizens, manifest in the rapid growth and development of the city and her commerce, affords a suitable place for such an Exhibition; and

"Whereas, it has been determined to hold such an Exposition at Tampa, Florida, during the months of January, February, March, April and May, A. D. 1908, and

"Whereas, his Excellency Napoleon B. Broward, Governor of the State of Florida, did on December 30, 1905, issue his proclamation calling an Isthmian Exposition to be held in the City of Tampa, commencing in the month of January, A. D. 1908, for the purpose aforesaid, and inviting the Governors of the several States comprising the United States of America, as well as the Governors of the Territories of the United States, to secure the co-operation of their State Legislatures in aid of said Exposition by participating therein and sending exhibits of their resources to said Exposition; therefore be it

"Resolved, that the President be, and he is hereby, requested to hold a naval review, in Tampa Bay at such time during the progress of said Exposition as he may deem best.

"Resolved further, that the President of the United States be, and he is hereby, requested to cause to be made such display of the Army of the United States at said Exposition as he may deem advisable.

"Resolved further, that nothing contained in this concurrent resolution shall be construed as committing the United States to any obligation hereafter to appropriate money for expenses or liabilities of any kind or character made or incurred by any one for the entertainment of the guests of such Exposition, or in connection with such celebration and Exhibition."

### Baltimore Exposition in 1914.

It is proposed to hold an International Exposition on the water front at Baltimore in 1914, that being the one hundredth anniversary of both the climax of the war of 1812 and the birth of the "Star Spangled Banner." The idea originated with the Baltimore "American," in which the national song was first published from Francis Barton Key's manuscript and received the general approval of citizens. The City Council has taken steps toward an organization and the Maryland State authorities have promised co-operation.

### The Japanese National Exposition of 1912.

The following statement has been prepared for THE WORLD ALMANAC by the Japanese Embassy at Washington:

The Exposition which will be held in 1912 in Tokio is a national exposition, and is to be maintained and administered by the Imperial Government of Japan. While it is a national exposition, the participation of the governments and peoples of foreign countries is cordially invited and the Japanese Government will make the plan on such a scale as not only to render it the largest exposition ever held in Japan, but give it a positively international character. This has been communicated to several countries, and many of them, appreciating the desire of the Japanese Government, have already shown their readiness to render their assistance.

It is expected that the national appropriation alone in connection with the projected exposition will amount to about \$5,000,000. Added to this, the local government and municipality of Tokio, as well as the various local governments throughout the Empire of Japan and the Government of Formosa, and so forth, will make appropriations in their respective budgets so that the total governmental and municipal appropriation covering the direct expenditures of the exposition will aggregate at least more than \$10,000,000.

The grounds of the exposition will occupy about 250 acres of land, of which about thirty acres will be covered by buildings already decided upon. Special buildings will be set apart for exhibits representative of arts, and science, including those relating to education and also of machineries and electrical appliances.

The period during which the exposition is to be held is determined to be from April 1 to October 31, so as to include both the cherry blossom and the chrysanthemum seasons, of which so much has been written by writers on Japan, and talked of by foreign visitors who have been there.

From these facts it can be easily seen that the Japanese Government desires to offer an unexcelled opportunity for foreigners to take a trip to Japan and to be entertained with attractions and amusements which even the natives may not often witness except on such an occasion.

Being a national exposition, the primary object of the enterprise is to widen the knowledge of the Japanese people as regards the industrial development attained within their own country as well as in the whole world; but, nevertheless, no better opportunity will be found in the near future than this exposition for one who entertains the desire to know the Japanese people better and to study deeper the natural and industrial resources of the country, no less than the present state of civilization and industrial achievement of her people.

## Alaska-Yukon-Pacific Exposition of 1909.

From June 1 to October 15, 1909, there will be held at Seattle, Wash., an international exposition, the Alaska-Yukon-Pacific Exposition.

The primary purpose of the Exposition, the creation of which is well under way, is to exploit the resources and potentialities of the Alaska and Yukon territories in the United States and the Dominion of Canada and to make known and foster the vast importance of the trade of the Pacific Ocean and of the countries bordering thereon. In addition it will demonstrate the marvellous progress of Western America.

It will be the aim of the Exposition to correct the common impression that Alaska and Yukon are nothing but countries of cold and gold and to place the Territories in their true light before the eyes of the world. Another object of the Exposition is to increase the trade of the nations that are lapped by its waters.

The Exposition will represent an expenditure of approximately \$10,000,000 when the gates are opened on June 1, 1909. It will occupy 250 acres of the campus of the University of Washington, adjoining one of the many beautiful residence districts of Seattle, on the gentle slopes and terraces overlooking Puget Sound, Lake Washington and Lake Union. The lakes are natural, fresh water bodies, Washington having an area of 38½ square miles and Union an area of 1 1-3 square miles. They are separated from the Puget Sound by the land upon which Seattle stands and will, by the time the Exposition opens, be connected with the salt water by a ship canal, now under construction. The unsurpassed stretches of water front on both lakes afford great opportunities for aquatic features, the like of which no other exposition ever possessed.

The grounds are twenty minutes' ride by electric car from the business centre of Seattle and are scenically one of the finest exposition sites ever laid out. The snow-clad Olympic and Cascades ranges of mountains are in plain view from all points of the grounds. Mount Rainier, the highest peak in the United States proper, rises to a height of 14,526 feet, and Mount Baker, another formidable peak of the Cascades, towers 11,000 feet.

Twelve large exhibit buildings will form the nucleus of the Exposition. Around these will cluster the State, Territorial and concessions buildings, foreign pavilions, the Administration group and smaller pseudo exhibit structures.

The main exhibit buildings will be: (1) United States Government, (2) Alaska, (3) Yukon, (4) Manufactures, Liberal Arts and Education, (5) Agriculture, Horticulture and Irrigation, (6) Machinery, (7) Forestry, (8) Fine Arts, (9) Fisheries, (10) Mines, (11) Hawaii, (12) Philippines.

On June 1, 1907, just two years prior to opening day, before a crowd of 15,000 persons, the first spadeful of earth was turned and work begun on the Exposition. The exercises which were held in the natural amphitheatre and participated in by governors, mayors and other prominent people of the Pacific Coast, were preceded by a large military parade in the city. The day, which was a holiday in Seattle, was made a memorable one in the history of the Pacific Northwest. Hon. John Barrett, director of the International Bureau of American Republics, represented President Roosevelt.

Work on the grounds since then has progressed rapidly. All of the grading has been finished, and half a dozen buildings are under construction. The Administration Building, the first to be completed, has been occupied by the Exposition offices for many months.

The United States Government will participate on a large scale. The Senate passed a bill at the last session of the Fifty-ninth Congress appropriating \$700,000 for the representation of Alaska, Hawaii and the Philippines, but as the session was short the measure did not get through the House. Assurance has been given the management that at the first session of the Sixtieth Congress a bill will be passed appropriating \$1,175,000 for the participation of the Government and its non-contiguous territories on the Pacific Ocean.

The people of Seattle financed the Exposition by raising \$650,000. The capital stock was placed at \$500,000, but when it was put on the market on the morning of Oct. 2, 1906, it was oversubscribed by the sum of \$150,000. The capital stock was increased to \$650,000, all of which will be sold in Seattle before the Exposition opens.

The States of the Union will participate on a large scale by the erection of buildings and the installation of interesting and comprehensive displays.

The State of Washington has appropriated \$1,000,000 for its representation at the Exposition. Oregon has made provision to spend \$100,000, and will supplement this amount at a later meeting of its State Legislature. California has appropriated \$100,000, with the assurance that an additional sum will be expended before the Exposition opens. Other States that have made preliminary appropriations are: Pennsylvania, \$75,000; Missouri, \$10,000; Utah, \$2,000; Nebraska, \$15,000.

Assurances have been given the Exposition management that the following States will make provisions for participation at the next meeting of their Legislatures: New York, Massachusetts, Montana, Kentucky, Idaho, Nevada, Wisconsin, Wyoming, Kansas, Illinois, Minnesota, Ohio, Indiana, Iowa, North Dakota, and Colorado.

The foreign exhibits will be confined strictly to the products of the countries bordering on the Pacific Ocean, and it is the plan of the Exposition management, as far as practicable, to induce the foreign nations to erect their own buildings and install therein collective and competitive exhibits. The following countries are expected to take part: Australia, Canada, Chile, China, Colombia, Costa Rica, Ecuador, Formosa, Korea, French East Indies, German Colonies, Guatemala, Honduras, British India, Japan, Mexico, Dutch East Indies, Nicaragua, New Zealand, Panama, Peru, Siam and Salvador.

In addition to the foregoing, the United States, Great Britain, France, Germany, Russia and the Netherlands will be invited to make exhibits representative of their interest in Pacific trade development.

Official Roster: J. E. Chilberg, President; John H. McGraw, Vice-President; R. A. Ballinger, Vice-President; A. S. Kerry, Vice-President; William M. Sheffield, Secretary; C. R. Collins, Treasurer; I. A. Nadeau, Director General; Henry E. Reed, Director of Exploitation; Frank L. Merrick, Chief of Publicity; Frank P. Allen, Jr., Director of Works.

## The Hudson-Fulton Celebration, 1909.

It is proposed to celebrate in the City of New York and on the Hudson River in September, 1909, the three hundredth anniversary of the discovery by Henry Hudson of the river which bears his name in the State of New York, and the one hundredth anniversary of the first successful navigation of that river by steam by Robert Fulton.

The Governor of the State of New York and the Mayor of the City of New York in 1905 jointly appointed a committee of citizens, of which the late Robert B. Roosevelt was chairman, to formulate plans for the celebration of the anniversary of the Discovery of the Hudson River, and at the same time the Mayor appointed a committee of one hundred to celebrate the one hundredth anniversary of steam navigation in 1907. These were consolidated and incorporated under the title of the "The Hudson-Fulton Celebration Commission," to celebrate both events in 1909.

The Commission is organized with the following officials: President, Stewart L. Woodford; Vice-Presidents, Herman Ridder, Andrew Carnegie, Hon. Joseph H. Choate, Hon.  Soon after the Commission was formed a World's Fair at or near New York City was suggested. After giving several public hearings the subject was referred to the Plan and Scope Committee, who, in their preliminary respect, expressed the belief that the country had been surfeited with such temporary celebrations, and voiced the hope that the celebration of 1909 would be conducted on a plan which would leave monumental works of lasting benefit to the people.

**National Congress of Mothers.**

**OFFICERS:** *President*, Mrs. Frederic Schoff, Philadelphia; *Vice-Presidents*, Mrs. David O. Mears, Albany, N. Y.; Mrs. W. W. Murphy, Los Angeles, Cal.; Mrs. Robert R. Cotten, Bruce, N. C.; *Recording Secretary*, Mrs. John Parker Bronk, Bridgeport, Ct.; *Corresponding Secretary*, Mrs. Edwin C. Grace, 3308 Arch Street, Philadelphia, Pa.; *Treasurer*, Mrs. Louis K. Gillson, Wilmette, Ill.

An organization of Mothers of the United States for the improvement of the condition of children throughout the country, Day Nurseries, Vacation Schools, Kindergarten, Probation Work, Child Labor, the Care of Dependent, Defective and Delinquent Children; Legislation Protecting Children, Playgrounds, and Parent-Teacher Associations are among the community interests considered.

**New York State Probation Commission.**

(Chapter 430, Laws of 1907.)

In accordance with Chapter 430 of the Laws of 1907, the State Probation Commission consists of seven members, of whom four are appointed by the Governor for terms of four years each; one is appointed by the State Board of Charities from among its members; one is appointed by the State Commission of Prisons from among its members, and the Commissioner of Education is a member ex-officio. The first appointments by the Governor, however, are for terms of one, two, three and four years, respectively. Commissioners shall serve without compensation, but shall be entitled to necessary and reasonable travelling expenses.

The general duties of the Commission are to collect and publish statistical and other information as to the operations of the probation system; to keep itself informed as to the work of all probation officers, and, from time to time, inquire into their conduct and efficiency; and, by such other means as are most suitable, to endeavor to secure the effective application of the probation system and enforcement of the probation law in all parts of the State. It shall make an annual report to the Legislature showing its proceedings under this act and the results of the probation system as administered in the various localities in the State, with any suggestions or recommendations which may be considered wise for the more effectual accomplishment of the general purposes of the Commission. The Commission, in the discharge of its duties, shall have access to all offices and records of probation officers, and may direct formal investigations of the work of any probation officer. The Commission shall employ a Secretary at a salary not to exceed \$3,000, and a stenographer and such other employees as may be necessary.

The following are the State Probation Commissioners appointed by the Governor July 2, 1907: President, Homer Folks, New York; Vice-President, Charles F. McKenna, New York; Felix Warburg, New York; Frank E. Wade, Buffalo; Roger P. Clark, Binghamton; Dennis McCarthy, Syracuse; Andrew S. Draper, Albany (ex-officio). Arthur W. Towne is Secretary of the Commission.

## General Federation of Women's Clubs.

*President*, Mrs. Sarah S. Platt Decker, Denver, Col.; *First Vice-President*, Mrs. Philip N. Moore, St. Louis, Mo; *Second Vice-President*, Mrs. John Dickinson Sherman, Chicago, Ill.; *Recording Secretary*, Mrs. John Dickinson, Chicago, Ill.; *Corresponding Secretary*, Mrs. Charles A. Perkins, Knoxville, Tenn.; *Treasurer*, Mrs. Josiah Evans Cowles, Los Angeles, Cal.

This organization, incorporated in 1892, is composed of over 3,000 women's clubs, having a membership of 150,000 in the United States and foreign countries. The purpose of the Federation is declared in its articles of incorporation to be "to bring into communication with one another the various women's clubs throughout the world, that they may compare methods of work and become mutually helpful. Constitutions of clubs applying for membership should show that no sectarianism or political test is required, and, while the distinctively humanitarian movements may be recognized, their chief purpose is not philanthropic or technical, but social, literary, artistic, or scientific culture." Meetings of the Federation are held biennially. There are State federations auxiliary to the General Federation, and single clubs in forty-five States. Several foreign clubs are members of the Federation—the Pioneer Club of London, Woman's Club of Bombay, and Educational Club of Ceylon, clubs in Australia, South America, etc. The officers of the New York Club are:

*President*, Mrs. William Cumming Story, 307 West 90th Street. *Honorary President*, Mrs. Belle De Rivera; *First Vice-President*, Mrs. Frederick Nathan; *Second Vice-President*, Mrs. Charles W. Fiske; *Third Vice-President*, Miss Mary Garrett Hay; *Recording Secretary*, Mrs. John Frances Yawger; *Corresponding Secretary*, Miss Meta Maynard, 108 West 45th Street; *Treasurer*, Mrs. J. Ella Rood; *Historian*, Mrs. Howard MacNutt.

## Aeronautics in 1907.

### MOTOR AEROPLANES.

Since the first aeroplane types of flying machines, designed by Maxim and Lilienthal, the work of inventors and scientists along the line of motor-driven, heavier-than-air flying machines has shown steady progress. While the general type of machines of past experiments has been more or less adhered to, there have been many improvements. Motors have been made stronger and lighter, problems of rising and alighting safely solved, and additional scientific knowledge of aerial conditions has been gained. The general and most popular design is that of the simple aeroplane, supported by air, through which it is propelled by detached force. There have been many radical but experimental departures from the aeroplane type, none of which, however, have shown any great degree of success. Among these radical types is the Helicopter, the production of Otto Luyties, of Baltimore, Md. The design of the machine embraces several pairs of huge wings and two or more upright revolving propellers, the latter operated by a 100-horse power motor for the purpose of lifting the machine. The entire weight is 1,700 pounds.

Achievements in the form of sustained flight, power to rise and descend without mishap, and to guide the machine in a circular flight are confined to the Wright Brothers, of Dayton, Ohio, and the Brothers Voisin, whose aeroplane, constructed on lines laid down by M. Octave Chanute, was driven in a successful flight on November 9 and 11, 1907, at Paris by M. Henry Farman. The aeroplane on the first attempt rose slowly from the ground, and in one minute and fourteen seconds completed a circle. Notice of the flight was not given to the French Aero Club, and Mr. Farman could not be awarded the Deutsch-Archdeacon prize of \$10,000 offered to the aviator who first completes a circular kilometer in the air.

This flight, however, is still far behind the achievements of the Wright Brothers in 1905 at Dayton, Ohio, when in the presence of reputable witnesses one of the brothers remained in the air 38 minutes and 3 seconds, making a circular flight of 24½ miles. Officials of the Aero Club of America, at the International Congress held in New York on October 28, 1907, admitted that in flights of man-carrying gasless machines the Wright Brothers are far ahead of all competitors. What the Wright Brothers have accomplished in the last two years, or since their 24-mile flight, is only problematical. It is conceded that they have made still further progress, and it is not unlikely that before the elapse of another year prolonged flights of motor-driven aeroplanes may be witnessed. The Wright Brothers have established one curious point—that a really successful flying machine will develop speed in excess of anticipations based on the motor's efficiency.

Santos-Dumont, in his Helicopter, made the first public demonstration of man-flight without gas support, travelling about 300 yards. His efforts were eclipsed by Mr. Farman in a successful flight on October 26, 1907, near Paris, when he drove his aeroplane nearly half a mile.

Although not a matter of authentic record, it is reported that M. Esnault Peletier, in a flying machine described as half automobile and half aeroplane, succeeded in making a series of flights near Paris, turning in the air, rising and descending at will. The machine resembles a butterfly, with the wings controlled by means of levers.

### DIRIGIBLE BALLOONS.

Since aerial navigation was first contemplated no year has recorded such progress in dirigible airships as that of 1907. It may be called the year in which the availability of sufficiently light and powerful motors first enabled experimenters to realize the chief dreams of aerial flight. The airship of the general type, first controlled in flight by Santos-Dumont, has entered definitely into the military establishments of the great Powers. It has been adopted by France, Germany, and England, and an aerial bureau is being contemplated by the United States Government. The three chief requirements of the airship—speed, endurance, and control—have been attained in a measure sufficient to make them of use in military operations.

In the military airship is foreseen the possibility of being able to pass over an enemy's country without effective opposition from its defenders. It will no longer be possible to maintain a position with troops disposed secretly. It will not be possible in the campaigns of the future to move a regiment by day or night as long as the air is infested with scouts. The Hague Conference, on August 19, passed a ruling forbidding the dropping of projectiles upon hostile positions from balloons or aerial machines. It is not known how far it may prove possible to employ airships in actual hostilities, but it is almost certain that the next great war will witness their use.

The British military airship, Nulli Secundus, the only one that has thus far been put through a course of tests by the British, has not shown itself to be in the same class with the German and French inventions. Its speed is about 21 miles an hour through the air, a rate inferior to that of the airships of other armies. There is no record showing that it remained in flight at any time for a period over an hour.

The German authorities, disquieted by the demonstrations of efficiency given by the French, airships early in 1907 turned their attention to producing something their equal or better. During the Summer they tried out three distinct types.

The airships of the French Government, of which it now owns four, are all descendants of the original Lebaudy airship, purchased from the Lebaudy Brothers in 1905. The Lebaudy II. was the first airship owned by the Government. Two others, the Patrie and the Republique, were completed and tried out during 1907, and a fourth is now under construction. These dirigibles are all built with a gas bag about 200 feet long and 73 feet in diameter. The under side is lined with a flat, firm plate, which takes the place of the suspended framework of other types of airships. It gives stiffness to the elongated bag and prevents it from buckling in the wind. To this bottom piece is suspended the car, with a propeller on either side. The gas bag is equipped with side and rear fins to insure stability, and with a rudder in the rear.

The Patrie was put through a series of flights lasting from June 27 until August 8. On July 22 Prime Minister Clemenceau and Minister of War Picquart made an ascent aboard

the Patrie and stayed in the air over an hour. This occurrence caused much comment in other countries and did more than any single incident to make observers outside of France aware that her military airships had gone beyond the purely experimental stage. On August 8 the Patrie made another trip which attracted notice. It was driven a distance of 26 miles against a 15-mile wind from the shed to the Chateau of Rambouillet, the residence at that time of the President of the French Republic, M. Fallieres. The airship remained there for an hour and returned to the starting point, after a trip of 3¼ hours.

The German Government has experimented with dirigible balloons of three types. The medium type corresponds more nearly to the approved French airship. The two extreme types are the flexible, represented by the airship of Major von Parseval, and the rigid, embodied in the production of Count von Zeppelin. The flexible airship aimed to attain the form most easily portable from place to place on the earth. The rigid type strove for size, lifting capacity and endurance. The Parseval type aimed to be a campaign balloon that could be depended on for service in the field. The Zeppelin device, of enormous size, was built to be as steady as a ship in the air. While the Parseval was able to ascend and descend frequently, the Zeppelin was built to stay in the air for days at a time.

Von Zeppelin's airship, the largest of its kind ever built, was purchased by the German Government. It is the greatest attempt at an airship of shiplike size that has ever been floated. If the accounts of its performances during the Summer of 1907 are correct, it has gone somewhat faster and considerably farther than any of its rivals. The balloon part is 420 feet long and 40 feet thick. This approaches more the shape of a lead pencil. The bag has a polygonal instead of a perfectly round surface, and the full thickness is carried almost to the ends.

The gas capacity of the Zeppelin dirigible, which is between 300,000 and 400,000 cubic feet, enables it to lift several tons. Two motors form part of its equipment. There is abundant buoyancy for all the fuel that need be stored for a thousand mile voyage.

The Zeppelin airship has attained a speed as high as 33 miles an hour, and has made a trip of 220 miles and back. This gives to the Germans the record for long-distance voyages by airship. Count von Zeppelin asserts that his dirigible balloon is capable of going a week without landing or refilling. It has already stayed up for a period of seven hours, much longer than that of any other airship.

In the development of dirigible airships in the United States aeronauts have not attained the same degree of perfection that has rewarded the efforts of experimenters abroad. Stevens, Baldwin, Knabenshue, Beachey, and Thomas and others of lesser note have confined themselves almost entirely to experiments with airships of small dimensions and limited power. Many inventors have been sadly handicapped by lack of funds. At the exhibition of the St. Louis Aero Club, held at St. Louis in October, 1907, a series of highly successful contests were held, in which the stability and perfect control of airships were conclusively demonstrated. A feature of the aerial contests was the flight of Cromwell Dixon in his sky-cycle. The machine consisted of an oblong gas bag, from which was suspended a frail framework supporting the operator, who propelled the machine by means of pedals and a sprocket wheel geared to the propeller. The sky-cycle was equipped with a rudder in the rear, and could be guided successfully in a moderate breeze. On June 20, 1907, Lincoln Beachey, in his dirigible airship, made a successful ascension at Staten Island. The operator's seat was astride of a triangular frame five feet below the cigar-shaped gas bag. The balloon was 52 feet long and 16 feet in diameter, and contained 6,500 cubic feet of hydrogen gas. The propeller was in front and driven by a four-cylinder four-cycle gasoline engine. A driving power of 400 revolutions a minute was obtained.

As a result of the steady improvement in dirigible balloons and the successful experiments of the French and German governments, the United States War Department has signified its intention of taking up aerial navigation in connection with the future operations of the Army and Navy. In December Brigadier-General James Allen, chief of the Signal Corps, announced that by the first of the year bids would be opened for the first two dirigible balloons of the United States War Department's Atlantic fleet. The specifications will call for dirigibles of 25,000 cubic feet capacity, with 30 or 40 h. p. engines, and capable of carrying two persons with ballast and remaining in the air at least three hours. The airships are to cost about \$3,000 apiece. A representative of the Navy has arranged to hold a series of tests at Fort George, New York, with the Thomas airship. This airship differs from the common type in that its buoyancy is obtained by means of oxygen gas. Walter Wellman abandoned his attempt to reach the North Pole when, in September, his airship during a trial flight encountered a storm and was wrecked on a glacier near Spitzbergen. King Victor Emanuel announced in October that he would present a cup for an international dirigible balloon competition to be held at Turin in 1911.

#### BALLOONING.

The United States during the year 1907 became the theatre of action for balloons and balloonists throughout the world. As a result a degree of interest was aroused which has given an enormous impetus to the investigation of this department of aerial navigation. Ballooning is no longer indulged in wholly by professional aeronauts. As a sport it has attracted many men of wealth. Hundreds of enthusiasts during the past year have enrolled themselves as members of aero clubs. The three principal clubs in the United States, at New York, Philadelphia and St. Louis, have more than doubled their membership. Balloon ascensions have become such a common practice that people are no longer amazed at the sight of one up among the clouds. This is especially true in France, where it is seldom that on a clear day one or more balloons or airships may not be seen sailing over Paris.

All new records in ballooning established in 1907 were made in the United States. The international balloon race for the James Gordon Bennett Cup, which started from St. Louis on October 21, resulted in the breaking of all balloon records, both for distance covered in a single flight and time spent above the earth. The contest was won by Dr. Oscar Ebsloch in the German balloon Pommern, which landed at Asbury Park, N. J.,

876½ miles from St. Louis. Alfred Leblanc, in the French balloon *Isle de France*, travelled 870½ miles, descending at Herbertsville, N. J., only six miles away from the winner. The other contestants travelled the following distances: Captain von Abercron, in the *Dusseldorf*, 800 miles; J. C. McCoy, in the *America*, 735½ miles; Alan R. Hawley, in the St. Louis, 716½ miles; Paul Meckel, in the German balloon *Abercron*, 689½ miles; Rene Gasmier, in the French balloon *Anjou*, 674½ miles; Major Henry B. Hersey, in the United States, 625½ miles, and Griffith Brewer, in the English balloon *Lotus II.*, 358½ miles. M. Leblanc, in the French balloon *Isle de France*, established a new world's record for duration of flight. The balloon was in the air 44 hours and 2 minutes. The best previous record was that of 35 hours and 40 minutes, made by Count de la Vaulx on his famous flight into Russia in 1900. The race in 1908 for the Bennett Cup will take place in Germany. Following the St. Louis race the International Aeronautic Congress was held in New York on October 27-28. The Congress was attended by prominent aeronauts and scientists of Europe and America.

The Lahm Cup was contested for and won by Captain Charles De F Chandler and J. C. McCoy, who started from St. Louis on October 17 and landed in Roan County, West Virginia, on October 19, covering a distance of 475 miles. Another conspicuous flight in 1907 was that of Dr. Wegener, who went from Berlin, Germany, to Enderby, England, a distance of 812 miles in 19 hours.

Early in the year the United States War Department placed an order for \$12,000 worth of balloons for experimental purposes to be used at the United States Aerial Station at Fort Omaha, Neb. The balloons are intended chiefly for signal work.

On November 9 Dr. Oscar Ersloeh, with Captain T. T. Lovelace and four other passengers, made a flight from Philadelphia to New York in the German balloon *Pommern*, demonstrating that the flight of a balloon could be governed by making use of the various air currents. The plan of flight, which was announced a week in advance, was carried out in a highly successful manner, the result proving that the direction of flight of a balloon may be controlled by the occupants of the basket.

Capital Punishment.

IN Italy there is no capital punishment, and it has been abolished in the States of Maine, Michigan, Wisconsin, Rhode Island, and Kansas; Colorado and Iowa have both restored it after brief periods of abolition. As to the methods of carrying out death sentences, the guillotine is employed publicly in France, Belgium, Denmark, Hanover and two cantons of Switzerland, and privately in Bavaria, Saxony, and also in two cantons of Switzerland. The gallows is used publicly in Austria, Portugal and Russia; and privately in Great Britain and the United States, except in New York and New Jersey, where the electric chair has been substituted. Death by the sword obtains in fifteen cantons in Switzerland, in China and Russia, publicly, and in Prussia privately. Ecuador, Oldenburg and Russia have adopted the musket publicly; while in China they have strangulation by the cord, and in Spain the garrote, both public; and in Brunswick, death by the axe.

\* For \$1,000 at maturity of policy. † Non-participating rates.  
The rates for intermediate ages can be approximated by comparison with the rates stated. The variation in the rates is due to the fact that the policy conditions (surrender values, incontestable clauses, etc.) are more liberal in some companies than in others, and because some have employed a 4 per cent. basis for the calculation of their premiums, while others have used 3 or 3 1/2 per cent.  
The rates for assessment and fraternal organizations are lower than those given above, but being dependent upon the mortality experienced each year, they are variable and subject to constant change.  
The above table of Annual Premium Rates was prepared for THE WORLD ALMANAC by S. Herbert Wolfe, Consulting Actuary, New York. Any new kinds of policies issued in 1908 will involve a different classification of rates.

**Life Insurance Progress in the United States.**

It is within the past sixty years that the vast business of life insurance in the United States has been developed. The experimental stage was ended and the era of advance was opened when, in 1843, the Mutual Life Insurance Company of New York began business, its first policy having been issued on February 1 of that year.  
Since then a large number of life insurance companies have been established. The following list includes those now transacting business which had their inception between 1843 and 1860 inclusive, arranged according to the date of the first policy issued:  
Mutual Life Insurance Company, 1843, February 1; New England Mutual Life Insurance Company (1), 1844, February 1; New York Life Insurance Company, 1845, April 17; Mutual Benefit Life Insurance Company (2), 1845, May 6; State Mutual Life Assurance Company (3), 1845, June 1; Connecticut Mutual Life Insurance Company, 1846, December 15; Penn Mutual Life Insurance Company, 1847, June 25; Union Mutual Life Insurance Company, 1849, October 1; National Life Insurance Company of Vermont, 1850, February 1; United States Life Insurance Company, 1850, March 4; Ætna Life Insurance Company, 1850, August 1; Manhattan Life Insurance Company, 1850, August 1; Massachusetts Mutual Life Insurance Company, 1851, August 2; Phoenix Mutual Life Insurance Company, 1851, September 11; Berkshire Life Insurance Company (4), 1851, October 27; Northwestern Mutual Life Insurance Company, 1858, November 25; Equitable Life Assurance Society, 1859, July 28; Washington Life Insurance Company, 1860, February 2; Home Life Insurance Company, 1860, May 1; Germania Life Insurance Company, 1860, July 16.  
How life insurance has progressed since the early part of 1843 is shown in the subjoined table by periods of years as indicated, assessment insurance not being included.

\* Annual statements of the fire insurance companies are rendered to the insurance departments during the month of January; therefore the statistics of condition January 1, 1908, were not ready when this publication went to press.

† The New York law requires a deposit of \$200,000 from foreign companies with the insurance department. This is treated by the department as "deposit capital," and the surplus stated in the next column is "surplus beyond deposit capital" and other liabilities.

The fastest time on record for a distance of over 440 miles was made by the Lake Shore and Michigan Southern R. R. from Buffalo to Chicago, in June, 1905, noted above. The fastest long-distance run less than 440 miles was on the New York Central R. R. September 11, 1895, from New York to Buffalo, 436 1-2 miles, in 407 minutes actual time. Average speed, 64 1-3 miles an hour, with two stops and 28 slow-ups, and on January 1, 1903, from Albany to Buffalo, 302 miles, in 295 minutes.

Among the fastest regular trains in the United States, for a shorter distance, are believed to be the New York Central "Empire State Express," between New York and Albany, 143 miles in 160 minutes, and the "Congressional Limited," on the Pennsylvania Railroad, which makes the run from Jersey City to Washington in 4 hours, 46 minutes, a distance of 227 miles.

On August 15, 1898, on P. & R. and C. R. R. of N. J., "Royal Blue Line," between Elizabeth, N. J., and Jenkintown, a distance of 69 miles, in 61 minutes, including 2 "slow-ups," some of the miles being traversed in 38 seconds.

The quickest run between Jersey City and Washington, 231 miles, was made on the Central Railroad of New Jersey, March 2, 1897 (by a special train, bearing Vice-President-elect Hobart and party), in 4 hours 8 minutes, making the running time, including "slow-ups" for taking water, changing engines, etc., 60 miles an hour. This beat the time of the "Aunt Jack" train, made by the Madison Square Theatre Company March 10, 1890, which was 4 hours 18 minutes, each way, going and returning.

The fastest long-distance foreign trains, including all stops, are, according to the "Railroad Gazette," as follows:

ROUTE.	Railways.	From	To	Miles.	Time— Hrs. Min.	Stops.	Inclusive Speed in Miles per Hour.
Sud Express.....	Orleans and Midi.....	Paris.....	Bavonne.....	486 $\frac{1}{2}$	8 59	6	54.13
East Coast.....	Gt. N. and N. E. Railways.....	London.....	Edinburgh.....	393 $\frac{1}{2}$	7 45	3	50.77
West Coast.....	L. & N. W. and Caledonian Rys.....	London.....	Glasgow.....	401 $\frac{1}{2}$	8 00	3	50.18

Of long-distance runs in France one is made on the Northern Railway of France by the Paris-Calais express, which runs 185 miles in 184 $\frac{1}{2}$  minutes, or a fraction over a mile a minute, allowing for a stoppage of 2 $\frac{1}{2}$  minutes at Amiens.

Other notable long-distance fast runs: February 14-15, 1897—Pennsylvania Railroad and C. B. and Q., Jersey City to Denver, 1,937 miles, in 48 hours; average speed, 40.3 miles per hour. August 29-31, 1891—Canadian Pacific, Vancouver to Brockville, 2,302 miles, in 77 hours 9 minutes; average speed, 36.32 miles per hour.

The Jarrett and Palmer special theatrical train, Jersey City to Oakland (San Francisco), 3,311 miles, June, 1876, 83 hours, 45 minutes; average speed, 39.53 miles per hour.

In October, 1905, the "Harriman Special" made the run from Oakland to Jersey City (3,239 miles) in 73 hours, 12 minutes, or 44.30 miles per hour. In May, 1906, the "Harriman Special" made the run from Oakland, Cal., to New York City in 71 hours, 27 minutes.

The "Scott Special" left Los Angeles, Cal., July 9, 1905, and arrived in Chicago (2,415.5 miles), July 11, having made the run in 44 hours 54 minutes, maintaining an average speed while in motion of 51 miles an hour.

On November 15, 1907, at Clayton, N. J., in a trial test on Pennsylvania R. R. between steam and electric locomotives, the steam engine made 93.6 miles an hour on a specially built seven-mile curved track, while the electric locomotive made but 50 miles an hour.

The Erie Mallet Compound, particulars of which are given in the first line of the table, is the largest and most powerful locomotive ever built. If worked to its full capacity it could haul a train of 225 loaded freight cars of 50 tons capacity each on a level track at 15 miles an hour. Such a train would be 134 miles long, and the engine would be exerting 4,000 horse power. The Pacific type locomotive for the Pennsylvania Lines West is the heaviest passenger locomotive ever built, and is capable of hauling 15 passenger cars at 60 miles an hour on level track, at which speed it would have to exert nearly 5,000 horse power.

Owing to the great difficulty in obtaining accurate statements of the immigrants from the contiguous countries of Canada and Mexico, no statistics of immigration into the United States of citizens of those countries are gathered by the Bureau of Immigration. The constant ebb and flow of persons entering and leaving the United States from and to Mexico and Canada, at the numerous points where such movements can be conveniently made, renders accurate statements on this subject extremely difficult, and the Bureau of Immigration in its annual report for 1902 states that "the immigrants do not include arrivals from the neighboring countries of Mexico and Canada except such as come from abroad through ports in these countries for the avowed purpose of entering the United States." The fact, however, that the Census of 1900 shows the presence of 1,183,225 persons in the United States born in Canada and 103,445 persons born in Mexico proves that the number of arrivals from those countries, proper to be considered as immigrants, must be large.

MANUFACTURE OF TELEGRAPH AND TELEPHONE APPARATUS.

(From Census Bulletin No. 73 of 1907.)

An apparent falling off in the production of telegraph apparatus from \$1,642,266 in 1900 to \$1,111,194 in 1905 is accounted for in part by the growing custom among the larger telegraph systems of making and repairing their own apparatus. The value of the factory product in 1905 is distributed thus: 76,826 intelligence instruments (key, sounder, etc.), valued at \$187,744; police, fire, district, and miscellaneous, valued at \$592,070; wireless telegraph apparatus, valued at \$114,050; and switchboards and parts and supplies, valued at \$217,330. The most important recent improvements have been the introduction of printing telegraph systems and the development and extension of wireless telegraphy.

The total value of telephonic apparatus manufactured, as reported at the census of 1905, was \$15,893,693, as compared with \$10,512,412 for the census of 1900. Of this total value, \$824,204 represented the value of 850,815 transmitters; \$696,113, the value of 831,195 receivers; \$6,483,418, the value of 887,447 complete sets of instruments; \$68,826, the value of 4,560 interior systems complete without instruments; \$5,154,447, the value of 4,233 central switchboards; \$564,795, the value of 3,917 private exchange boards; and \$2,071,895, the value of telephone parts and supplies (chiefly the signalling apparatus in magneto-telephone sets and the line protector fuses, etc.).

Illinois is the great centre of telephonic manufacturing industry in the United States, both as to number of factories and as to output. More than half the total product, or \$8,357,521, was from this State. The output of New York was also large, but not quite half that of Illinois.

Recent inventions involving the use of telephonic apparatus are: A system of music production and distribution by means of electrical currents over the telephone circuits; the Poulsen telegraphone, the object of which is to furnish a record of the speech received over the telephone; a system of submarine signalling based on the use of the telephone; and the "telegraphone," an instrument used in connection with railway telegraph circuits.

## The Submarine Cables of the World.

(From report issued by the International Bureau of Telegraph Administrations.)

The following table sets forth the entire system of submarine cables of the world, including those along the shores and in the bays, gulfs, and estuaries of rivers, but excepting those in lakes and the interior watercourses of continents. The list includes all cables operated by private companies, and in addition thereto under the name of each nation is given the list of cables operated by the government of that nation.

### Telephone Statistics.

The following are the latest statistics made public by the American (Bell) Telephone Company. (See article on "Electrical Progress in 1907" in reference to other telephone companies.) The figures are for January 1 of each year:

	1905.	1906.	1907.		1905.	1906.	1907.

The number of instruments in the hands of licensees under rental at the beginning of 1907 was 7,107,836. The number of exchange connections daily in the United States is 16,478,053, or a total per year of about 5,305,900,000. The average number of daily calls per subscriber is six. The capital of the company is \$183,661,800.

What are known as independent telephone companies, as distinguished from Bell companies, are nearly all represented in the International Independent Telephone Association. Of these there are about 9,000 companies operating an aggregate of over 3,500,000 instruments. The capital invested is approximately \$330,000,000, the number of stockholders 500,000, and the income roughly is \$105,000,000. During the last year the principal feature of the independent companies' activities was the extension of long-distance business. The Middle West has been best developed, and at present over independent lines continuous communication is possible throughout nearly all of the territory within the east and west limits of Philadelphia and Nebraska and Kansas, and the north and south limits of Minneapolis and Birmingham. The increase in business, according to locality, during 1907, varied from 10 to 40 per cent. and averaged between 15 and 20 per cent. (See also Electrical Progress in 1907).

Telephone messages per annum (latest reports): France, 205,655,374; Germany, 1,207,446,753; Great Britain and Ireland, 723,346,393; United States, 9,000,000,000; Austria, 166,474,133; Denmark, 108,750,035; Hungary, 82,909,800; Belgium, 53,977,696; Switzerland, 36,303,415; Netherlands, 31,470,095. In Italy and Spain the use of the telephone is very limited.

### LURE CASTING WITH SOLID RUBBER FROG.

Ashley C. Smith, 98 2-5 per cent., in open contest, Chicago, August 18, 1900.

Following are the records made with ¼ ounce casting weight:

One-quarter ounce contest for accuracy at buoys 60, 65, 70, 75, and 80 feet from platform, three casts at each buoy. Weight dropping in circle 30 inches in diameter to be scored perfect. Every foot or fraction of a foot from said circle to be scored a demerit. The total of the demerits divided by fifteen and subtracted from 100 gives the percentage. 99 1-15 per cent., made by Wm. Stanley, in the International Tournament, Racine, Wis., August 16, 1907.

One-half ounce contest at buoys 60, 70, 80, 90, and 100 feet, same rules as above. 99 per cent., made by E. R. Letterman, in the International Tournament, Racine, Wis., August 17, 1907.

Long distance cast on the lawn, ¼ ounce weight. E. B. Bartholomew, with an average score of 183 49-60 feet for five casts. Longest lawn cast on record 230 feet, by O. E. Becker, at club contest of Chicago Fly Casting Club, June 1, 1907.

In the Angler's Club tournament at Central Park, New York, May 18, 1907, R. C. Leonard made a new world's record for professionals of 214 ft. 7 in. in the single-handed bait casting contest, and Charles Stetath also made a new world's record for amateurs of 200 feet. Team casting, Chicago won against San Francisco, with 97 13-30 against 94.7. Made at San Francisco, Cal., 1902. Height of the platform over water 18 inches.

### ENGLISH FLY AND BAIT-CASTING RECORDS.

Ski.

The National Ski Association of America was organized February 21, 1905, and has a membership of 2,000 representing twenty-five clubs. Present officers are: President, Carl Tellefsen, Ishpeming, Mich.; Vice-President, John C. Lohrbauer, St. Paul, Minn.; Secretary, Aksel H. Holter, Ashland, Wis.; Treasurer, H. R. Beebe, Utica, N. Y.

Annual championship contests in long-distance and cross-country runs and in ski jumping are held, the last being at Ashland, Wis., February 7-8, 1907. Asarja Antio, Ely, Minn., won the nine-mile running contest; time, 47m. 20s. Oluf Jomurne, Coleraine, Minn., won the ski championship in two jumps, each measuring 91.2 feet. The next national tournament will be held at Duluth, Minn.

Previous to 1905 the American ski jumping record was held by Carl Ek, Red Wing, Minn., who covered 103 feet in 1902. In 1905 Gustav Bye, Duluth, Minn., made a record of 106 feet. January 23, 1907, Ole Feiring, Duluth, covered 112 feet, and the present record holder is Ole Mangseth, Coleraine, Minn., who, the same day, cleared 114 feet. The longest jump on record was made in Modum, Norway, February 9, 1902, by Nels Gjestvang, who cleared 135 feet without a fall.

Hockey.

The Wanderers' Hockey Club of Montreal won the championship of Canada and also the Stanley Cup, emblematic of the world's championship, winning every contest against eighty teams during the season.

The season in New York was one of great interest. St. Nicholas team proved a great surprise, winning the championship in the Amateur Hockey League with six straight victories. Princeton, by four straight wins, also made a successful season in the Intercollegiate League. The standing:

C., Carthage Ice Yacht Club. \*Race under the new Deed of Gift. No races have been sailed since 1902, the club holding the trophy having received no challenge. Contributed to THE WORLD ALMANAC by John A. Roosevelt, Poughkeepsie, N. Y.

In the races at Gull Lake, Kalamazoo, Mich., in March, 1904, the Wolverine, owned by Commodore D. C. Olin, of the Kalamazoo Club, won the Stuart International Trophy. In the last heat over a 20-mile two-point course, the time of the Wolverine was 42 minutes.

IMPORTANT RACES IN 1907.

At Kalamazoo, Mich., February 24, the Wolverine, owned by the Kalamazoo Ice Yacht Club, broke all world's records for a two-point course, sailing 20 miles in 39 minutes, 50 seconds. The boat was required to turn every two miles.

Imp of the North Shrewsbury Ice Boat Club won the third-class world's championship pennant at Red Bank, N. J., March 10, sailing 20 miles in 57 minutes, 17 seconds. H. S. Terhune's X. L. N. C. won the Board of Trade Cup for the South Shrewsbury Club, Hazel L won the third leg, sailing a 15-mile course in 30 minutes, 43 seconds. Red Rover won the Patten Inter-State trophy.

## Yachting.

Sir Thomas Lipton, through the Royal Irish Yacht Club of Dublin, challenged, in September, for the America's Cup, but acceptance was refused by the New York Yacht Club as custodian of the trophy on the ground that while the challenge called for a race between yachts in Class J (68-foot rating) the conditions under the deed of gift require competition by boats of highest type (90-foot rating). Later efforts were made for a race by the Royal Swedish Yacht Club of Stockholm and by the Brooklyn Yacht Club, the latter offering a trophy for an international race of 70-footers.

The Reliance allowed the Shamrock III, 1m. 57s. in all their races, Reliance measuring 108.41 ft. and Shamrock III, 104.37 ft. In the preliminary trials between Reliance, Constitution, and Columbia the Constitution won three races, although Reliance was selected as the Cup defender.

## SONDER KLASSE RACES.

Ten boats competed in the preliminary races off Marblehead, Mass., in June, and three—Chewink (F. G. Macomber, Jr.), Marblehead (Sumner Foster), and Spokane (J. Lewis Stackpole)—were selected for the German-American races for the Kaiser's Cup at Kiel in August. The German boats won as follows: First race, Wittlesbach (Paul Francke); second race, Tilly (Prince Henry of Prussia); third and fourth races, Wansee (Otto Protzen). Wansee won the fifth race and the cup, the American boats being withdrawn. Later the American boats went to Bilbao, Spain, where one race for the King's Cup was won by Spokane and the next three by the Spanish boat Dorica Santi Chouta.

## CUP RACES AT JAMESTOWN.

Races for the King Edward and other cups were sailed off Hampton Roads September 11-20. Roy A. Rainey's schooner Invader finished first in the 400-mile race, from Greenwich, Ct., to a point off Cape Henry, in the elapsed time of 68.37.50. George Lauder's schooner Endymion was second, in 73.24.15. On time allowance Robert Olyphant's 43-foot water-line schooner Venona won the race, her elapsed time being 78.09.13 and corrected time 63.48.00. Capsicum, C. Sherman Hoyt, Seawanhaka-Corinthian Y. C., New York, won the King's Cup for 22-footers, and Sue, E. F. Luckenbach, Atlantic Y. C., New York, the Roosevelt Cup for 27-footers. Eleanor, F. F. Fabyan, Eastern Y. C., Boston, won the Lipton Cup.

## KING'S AND ASTOR CUP RACES.

The second race for the cup presented by King Edward, and won in 1906 by F. F. Smith's sloop Effort, was sailed under the auspices of the New York Y. C. off Newport August 17 and was won by the Herreshoff schooner Queen, owned by J. Rogers Maxwell, and sailed by his son Harry. Queen sailed the 35 1/2-mile course in the elapsed time of 3hr. 46m., beating her closest competitor, Morton F. Plant's schooner Ingomar, by 3m. 28s. Queen's corrected time was 3.30.32. Allowances were made on a 90-foot racing measurement. Corrected time of other yachts (all sloops) were: Avenger, 3.43.24; Istalena, 3.43.43; Aurora, 3.46.17; Winsome, 3.46.30; Neola, 3.51.27.

The Astor Cup races, under the auspices of the New York Y. C., were sailed off Newport August 15, the cup for schooners being won by Frederick F. Brewster's Elmira, and

## YACHTING—Continued.

that for the sloops by Robert W. Emmons's Avenger. Fluky winds prevailed over the course of 38½ miles. Elmira's corrected time was 5.24.38 and Avenger's 5.17.40.

## BERMUDA OCEAN RACE.

Twelve yachts started in the Bermuda ocean race from Gravesend Bay, Brooklyn, to Hamilton, Bermuda, June 5-10. The distance was 650 nautical miles. The schooner Dervish, H. A. Morss, Corinthian Y. C. of Philadelphia, won the Maier Cup, first prize for yachts of 50 to 90 feet racing length, and the yawl Lila, R. D. Floyd, Brooklyn Y. C., won the Three Clubs' prize (Brooklyn, New Rochelle, and Royal Bermuda) for boats under 50 feet racing length. The corrected time of Dervish was 90hr. 20m, and that of Lila 97hr. 5m., the former having an allowance of an hour and a half and the latter six and three-quarter hours.

Seneca, Rochester Y. C.'s defender of the Canada's Cup, defeated Adele, the Royal Canadian Y. C.'s challenger in three straight races at Charlotte, Lake Ontario, August 10, 12 and 13.

Cherry Circle, owned by the Chicago A. A. syndicate, for the second time won the Lipton Cup for 21-footers on Lake Michigan.

## Trap Shooting.

William H. Herr won the national yearly average. He shot at 14,055 flying targets in competition, breaking 96.3, a world's record. Mr. Herr is a U. M. C.-Remington professional.

The national shoots given by the Interstate Association for the promotion of trap shooting proved a great success, 1,025 competing in the five tournaments. The winners and scores:

## Lawn Tennis.

The great feature of the tennis season of 1907 were the many victories scored by Miss May Sutton in England, and the game, but unsuccessful, effort of Beals C. Wright and Karl Behr to win the Davis Cup. Miss Sutton defeated Mrs. Chambers, Great Britain's woman champion, 6-2, 6-4. She won for the third time the eighty-guinea bowl, representing the Welsh championship, and presented by the Marquis of Bute, besides other trophies. Wright and Behr were defeated in their round for the Davis Cup by Brooks and Wilding, the Australian, 6-4, 6-4, 6-2.

National Indoor Championship.—F. B. Alexander and H. H. Hackett retained their title, defeating W. C. Grant and H. L. Westfall at the Seventh Regiment Armory, New York, February 22, 7-5, 6-1, 6-0. Wylie C. Grant, the title holder, was defeated by Theodore R. Fell, 3-6, 6-3, 6-2, 1-6, 6-0. Miss Elizabeth H. Moore defeated Miss Marie Wagner in the women's singles, 6-2, 4-6, 6-2.

National Outdoor Championships.—William A. Larned, Annapolis, Md., defeated Robert Leroy, Columbia, New York, in the twenty-seventh annual tournament at Newport, 6-2, 6-2, 6-4. W. J. Clothier defaulted in the final, and Larned secured permanent possession of the cup. Results in previous years in challenge rounds:

Motorcycle.

THIS sport has suffered in high speed development because after the destruction of the scientifically banked board track at Charles River Park, Cambridge, Mass., and the cement track at Chicago, no courses have been available, excepting the unbanked dirt tracks not well adapted for the terrific speed of motorcycles. Wray and Curtiss made their straightaway records on the beach at Ormond, Fla., in January, 1907. The Federation of American Motorcyclists recognizes records made under the international weight limit of 110 pounds, which records are as follows.

**Cricket.**

The visit of the Marylebone team, of England, in September, was a feature of the season. Rain, however, caused a draw in four of the five games in the East. Against the All New York team in the opening game the visitors scored 338 runs for four wickets against 45 for two for New York. Two American records were made—157 for the first and 285 for the second wicket. Rain the second day caused a draw. With the All Philadelphia team the score was 162 against 25 runs for one wicket for the locals the first day and 64 for three against 157 for Philadelphia the second day, when again rain caused a draw. Marylebone then defeated the Philadelphia Colts by one inning and 175 runs, the score standing 329 to 156. With the Gentlemen of Philadelphia the visitors played their closest game, the final score being: Marylebone, 222-124; Philadelphia, 227-60 for nine wickets.

The University of Pennsylvania team, Captain Lothrop Lee, visited Great Britain in June and July to test the strength of the public school teams, winning eight of sixteen games played, tied in six and lost with Harrow and Woodbrook, of Bray. The Americans defeated Winchester, which had beaten Eaton in the Spring Championships, tied with University of Dublin, and beaten Charter House, Repton, Shrewsbury and Clifton.

The annual game between the Staten Island and Philadelphia clubs, played on the former's grounds in September, resulted in a local victory, 123 to 69 runs.

A. M. Woods, of Belmont Club, led the batsmen of the Associated Cricket Clubs of Philadelphia, with an average of 50.22 for thirteen innings. His high score was 88 and total runs 452. H. G. Pearce led in bowling averages, with 6.88 for 17 wickets, while J. B. King had 9.02 for 49 wickets. For the Philadelphia Cup, W. A. Allison averaged 35.00 for seven innings in batting, and G. Priestman 3.60 for ten wickets in bowling.

Nottinghamshire won the English County Championship with an undefeated record of fifteen games won and four drawn. The order of finish was as follows:

**BEST SCORES IN CRICKET.**  
A. C. MacLaren scored 424 for Lancashire vs. Somerset at Taunton, Eng., July, 1895, the record in a first-class match. A. E. J. Collins, playing at Clifton, June, 1899, for Clarke's House vs. North Town, scored 628 not out, the record in any match. Melbourne University scored 1,094 against Essendon at Melbourne, 1898, the highest authenticated record. In a match between A. E. Stottart's English team and New South Wales 1,733 runs were scored, a record in first-class cricket. The longest partnership on record was 623 by Captain Oates and Private Fitzgerald, First Royal Munster Fusiliers vs. Army Service Corps at Cunagh, 1895.

Best records in the United States and Canada are: G. S. Patterson's eleven, playing against A. M. Woods' eleven at Philadelphia, scored 689. J. B. King scored 344 not out for Belmont vs. Merion Team B in 1906. W. Robertson, 206 not out, and A. G. Sheath, 118 not out, scored 340 runs in partnership without the loss of a wicket at San Francisco in 1894. Smallest score was Americas, O. vs. Roseville at Guttenburg, N. J., in 1897. Largest score in the Metropolitan District Cricket League Championship, New Jersey Athletic Club, 385 for five wickets, vs. Manhattan, at Bayonne, N. J., 1897. Smallest score in the same series, Crescent Athletic Club, 4, against the New Jersey Athletic Club, 1896. J. Wisden, bowling for George Parr's English eleven vs. United States and Canada's twenty-two, in 1859, at Rochester, secured six wickets in six consecutive balls.

**Billiards and Pool.**

**BILLIARDS.**

The season of 1906-7 in billiards awakened deep interest among patrons and was alike prosperous to the players and manufacturers. All the tournaments were well attended, and the scores of the amateurs as well as the professionals were the best made in years. The outlook for billiards and pool in America this season is flattering. Match and tournament contests of 1906-7 follow.

Championship of the World at 18.2.—Grand Central Palace, New York, Dec. 8, 1906, second match of second series for silver Challenge Cup and \$500 a side—George Sutton, 500-107-26.32 (total, high run and winning average); William F. Hoppe, challenger, 258-78-13.2. Orchestra Hall, Chicago, Jan. 21, 1907, third match—George Sutton, 500-71-17.86; Orlando B. Morningstar, challenger, 472-72-17.11. Orchestra Hall, Chicago, Nov. 5, 1907, fourth match—George Sutton, 500-232-33.33; Jacob Schaefer, challenger, 241-93-16.06.

World's Championship at 18.1.—Electing to go abroad, William F. Hoppe forfeited the championship challenge medal and \$250 to challenger, George Sutton, Jan. 2, 1907. Orchestra Hall, Chicago, March 11, third contest of second series, \$500 a side and medal—Jacob Schaefer, challenger, 500-100-13.88; George Sutton, 448-51-12.44. Schaefer's run of 100 is the highest in a championship match (not record contest merely) at 18.1 balkline.

Championship of America at 18.2.—New York Theatre concert hall, Nov. 19 to Dec. 1, 1906. Prizes aggregating \$950 in cash and challenge emblem; open only to experts who have not been prize-winners in first-class championship events at balkline. Games, 400 points up. Twenty-one games.

McLaughlin-Taylor tie not played off. That between Cutler and Cline determined at Maurice Daly's Dec. 3, Cutler winning by 400 to 230.

Philadelphia Interclub Handicap.—Championship at 14.2, February, 1907; contestants all members of social or athletic clubs—T. Mortimer S. Rolls, winner, with 11.54 as high average; J. E. C. Morton second, with 7.24; Joseph Mayer third, with 5.48; J. Jules, Hovey, Pa.; William E. Uffenheimer, James S. Alcorn and Warren A. Hawley. This event is an annual. Rolls is always at "scratch," 300. This year Morton and Mayer were both at 275.

National Amateur Championship.—German Liederkranz Society's Club House, New York, March 4 to 14, second annual tournament of the second 14.2 championship series of the N. A. A. B. P. Fifteen regular games, 300 points up.

Playing off the ties gave Demarest and Conklin, both Chicago representatives, first and second prizes. Gardner third, and Poggenburg fourth. In defeating Mial in play-off Poggenburg ran 115 and averaged 42.86. The latter figures are by far the best record for 14.2 in their maker's class, but neither they nor the 115 have any bearing on the prizes for best run and both averages, all three of which went to Demarest, whose general average is the best in America for this class. His successive winning averages were 9.38, 18.75, 27.27, 13.04 and 15.79.

French "Amateur Championship at Du Monde."—Billiard Palace, Paris, ending March 15, third and final annual tournament of the series, Lucien Revolle, of Toulouse, having won all three. Games, 400 points, 14.2. Revolle was undefeated, his high run being 103 and his winning averages 13.33, 20, 21.05, 17.39 and 26.67, making his general average 18.69 in 2,000 points, which is the best of his class in the world. The highest run of the tournament was 130, by Davantiere, whose best winning average (16.67) was surpassed by Revolle's only. The other contestants were M. M. Francois, Pasco, Blanc and Mortier.

**POOL.**

World's Championship Matches at Continuous Ball Pool, Challenge Emblem and \$150 a Side.—Rochester, N. Y., Nov. 21 to 23, 1906, Jerome Keogh, champion, 600; Fred Tallman, challenger, 346. Buffalo, N. Y., Dec. 27 to 29, 1906, Thomas Hueston, challenger, 600; Jerome Keogh, 507. New York City, Feb. 7 to 9, Thomas Hueston, 600; Edward Dawson, challenger, 368. New York City, March 21 to 23, Thomas Hueston, 600; Jerome Keogh, challenger, 497. Greensburg, Pa., April 23 to 25, Thomas Hueston, 600; William H. Clearwater, challenger, 537.

In all these tournaments the Brunswick-Balke-Collender Company has given the trophies, which are very valuable and are recognized as emblematic of the championship they represent.

**BEST RECORD AVERAGES.**

Professionals.—100 points at 18.2, George Sutton, New York, 1906; 31.25 at 18.1 by Frank C. Ives, Chicago, 1897; 100 at 14.2 by Jacob Schaefer, New York, and F. C. Ives, Chicago, 1903; 40 at 8.2 by Jacob Schaefer, Chicago, 1883. Cushion Caroms—10 by Jacob Schaefer, New York, 1883 (4½x9 table), and at Chicago, 1887 (5x10 table). Champion's Game—37.97 by George F. Slosson, Paris, 1882.

Amateur.—33.33 at 18.2 by Lucien Revolle, Paris, 1904; 27.27 at 14.2 by Calvin Demarest, New York, 1906. In playing off tie in championship won by Demarest, J. Ferdinand Poggenburg averaged 42.86 in 300 points.

**BEST RECORD RUNS.**

Professional.—307 at 18.2 by Willie Hoppe, Chicago, 1906; 139 at 18.1 by Jacob Schaefer, 1899; 566 at 14.2 by J. Schaefer, New York, 1903; 246 at 8.2 by Maurice Vignaux, Chicago,

## BILLIARDS AND POOL—Continued.

1883. Cushion Caroms—85 by F. C. Ives, Boston, 1896. Champion's Game—398 by George F. Slosson, Paris, 1882.  
 Amateur.—109 at 18.2 by Lucien Revolle, Paris, 1904; 130 at 14.2 by Wayman C. McCreery, New York, 1899.  
 Miscellaneous—Willie Hoppe made a run of 51 points "off the red" in a Paris academy, 1907; Thomas Bush, Elmira, N. Y., pocketed 88 balls from the "break," 1907; Charles Nolan, in a St. Louis academy game, 1907, made a high run of 6, an average of 1.40, in a three-cushion game of 25 points; George Sutton, in practice for Schaefer at 18.1, ran 221 points. By use of the anchor cannon stroke (now barred) C. Dawson, in London, April, 1907, made an unfinished run of 23,769, remaining at the table six nights in a match with Lovejoy, who, by the irony of fate, claimed to have discovered the stroke.

## Wrestling.

A. A. U. Championships—These bouts were held in Newark, March 28 and 29, and the winners were as follows: 105-pound class—George Taylor, Newark Turn Verein; 125-pound class—George S. Dole, Yale; 135-pound class—B. Bradshaw, Boys' Club, New York; 145-pound class—Richard Jaekel, N. Y. A. C., middleweight (155 lbs.) Frank Narganes, Columbia; heavyweight class—Jacob Gunderson, Dovre Sporting Club, New York.

Intercollegiate Championships—Yale won in the bouts held at Princeton, scoring 11 points to 7 each for Princeton and Columbia and 3 for Pennsylvania. Winners in finals: 115-pound class—Passarella, Princeton, 125 pounds—Dole, Yale, 135 pounds—Dole, Yale, and Latimer, Princeton, a draw, 145 pounds—Lindo, Columbia, 155 pounds—F. Narganes, Columbia, 175 pounds—Folwell, Pennsylvania. Heavyweight—Gibel, Yale. In the dual meets Yale defeated Columbia, Princeton defeated Pennsylvania and Cornell defeated Pennsylvania, all 4 bouts to 3. Narganes made the best showing, winning three bouts with Yale in the 158, 175 and heavyweight classes.

New York A. C. Championships—Winners: Dr. L. W. Ely, heavyweight; C. R. Woods, middleweight; L. P. Bessave, Jr., welterweight, and H. Flammer, lightweight.  
 Y. M. C. A. Championship—Winners: A. Swanson, Harlem, lightweight; Fred Purvis, Brooklyn, 125-pound class; A. Peterson, Harlem, 135 pounds; L. Rath, Second Avenue, 145 pounds; W. Fernicks, Harlem, 158 pounds; Charles Marr, West Side, heavyweight class.

## Racquet and Court Tennis.

One of the most important events of the year was the brilliant victory of Jay Gould, the 18-year-old son of George Gould, over Eustace H. Miles, for the British amateur court tennis championship. Young Gould defended his title as American champion at Boston, March 23, when he beat Joshua Crane, Jr., 6-1, 4-6, 6-2, 6-2. At Queen's Club, London, May 4, Gould defeated Miles, 3 sets to 2, the scores reading 6-4, 4-6, 1-6, 6-2, 6-4. Mr. Gould won five contests in England and lost none.

National Racquet Championship.—R. R. Fincke, New York, defeated George H. Brooke, Philadelphia, at New York Racquet and Tennis Club, 15-5, 7-15, 17-14, 15-6.

Eastern States Amateur Championship for the Tuxedo Gold Racquet, valued at \$500, Presented by Hugh Baring.—Clarence H. Mackay, New York Racquet and Tennis Club, defeated George H. Brooke, Philadelphia, 15-8, 15-8, 15-12. As a result of this contest at Tuxedo, Mackay, in winning the cup three years in succession, it became his personal property.

National Racquet in Doubles.—R. R. Fincke and R. D. Wrenn, New York, defeated Willing Spencer and Edgar Scott, Philadelphia, at Boston, 15-4, 15-0, 15-0, 15-8.

Canadian Racquet Championship.—R. F. McDougall, Montreal, defeated E. Hewitt, New York, 15-11, 8-15, 15-12, 17-14.

## Swimming.

The swimming season of 1907 was notable for the development of swimmers the world over, and more particularly in the United States. The number and quality of competing men improved wonderfully. To Americans the feature of the season was undoubtedly the formation of an intercollegiate swimming association. Five of our leading colleges—Princeton, Yale, Pennsylvania, Harvard and Brown—took membership in it, which shows that this sport is becoming an important university sport.

Among the brilliant performances of the year those of C. M. Daniels, of the New York A. C., stand supreme. His 100-yard swim in 55 2-5 sec. in the championship of England is the most sensational performance ever credited to a swimmer, and his mile in 23.40, in a 60-foot pool, places him in a class by himself. He is a better all-around swimmer than even the great Barney Keran, of Australia, and undoubtedly the fastest sprinter the world has ever produced.

## NOTABLE EVENTS OF 1907.

WATER POLO CHAMPIONSHIPS.

For the sixth year the water polo team of the New York A. C., coached by the great national expert, L. de B. Handley, showed its superiority over all comers, going through the season of 1907 without a defeat, and taking the national championship at the Jamestown Exposition. The men who took part in the most important matches were Captain L. de B. Handley, Ogden M. Reid, Bud Goodwin, Dave Hesser, J. A. Ruddy, C. D. Trubenbach, Lester Crane, James Steen and Foster Naething. Eight match games were played during the season, the N. Y. A. C. men aggregating 31 points to 5 for their opponents.

## Public Schools Athletic League.

During the year more than 2,500 boys of the public schools of Greater New York competed in the various games for the Elementary and High School boys. THE SUNDAY WORLD held a series of track and field games for the Elementary schools, and THE EVENING WORLD gave a trophy for target shooting.

The Inter-Club series between Boston A. A. and New York A. C. resulted in a victory for the former—5 bouts to 4.

### Sunday World Field Days.

In the Spring of 1906 one hundred grammar schools in New York City held individual sets of field day games. This great series of athletic meets, known as the Sunday World Field Days, was planned by the Sunday World, which also gave the prizes. The games were under the direction of the New York Public Schools Athletic League. They were held in every borough of the city. All the playground parks of Manhattan equipped with running tracks were used, armories in Manhattan and Brooklyn, the roof gymnasiums of some of the larger schools, fields in the outlying districts, and the tracks of various athletic clubs. The programme of each of the meets consisted of individual and relay races, jumping and weight throwing.

In the Spring of 1907 the Sunday World separate school field days were continued, one hundred schools again holding the meets. The same number of medals were awarded as in 1906. This year the boys were divided into classes according to their weights, and there were contests for each of the following classes: 80-pound boys, 95-pound boys, 115-pound boys and in unlimited class of heavier weights.

Both in 1906 and 1907 there was a grand final meet in the Autumn, in which the 100 schools that had held Sunday World field days during the year were each entitled to enter twenty contestants. These big final meets excited much interest. Ten thousand people witnessed the exciting contests for the championship gold, silver and bronze medals at Celtic Park in the 1907 meet.

In the two years of the Sunday World Field Days nearly 40,000 boys have taken part in the athletic games. The percentage of boys entering the games was very large, from many of the schools exceeding 50 per cent. of the total enrolment in the grammar grades, while in some it went very much higher, an unprecedented record in New York school field athletics.

An honor plaque, a large shield appropriately inscribed, was presented by the Sunday World to the school in each of the five boroughs which entered the largest percentage of boys in its field day. These were awarded as follows: School No. 7, Manhattan, 89.32 per cent.; School No. 32, Bronx, 97.06 per cent.; School No. 128, Brooklyn, 58 per cent.; School No. 83, Queens, 86.32 per cent.; School No. 12, Richmond, 99 per cent.

The P. S. A. L. rule that only boys having a certain high mark in scholarship effort and deportment could enter the games was strictly enforced.

In many cases the entire school—teachers and pupils—was present to witness the field day contests. The games had a strong influence in creating and stimulating the athletic spirit among great numbers of boys in the New York public schools, and were also highly approved by the principals and teachers because of their effect in encouraging good conduct and good scholarship.

Following are the results of the Sunday World Grand Final Field Day, at Celtic Park, Sept. 28, 1907:

## Chess.

FOLLOWERS of chess enjoyed the rare treat of witnessing a match for the world's championship in 1907, between Dr. Emanuel Lasker, holder of the title since 1893, and Frank J. Marshall. The match was for a purse of \$1,000 and play began in Brooklyn on January 26. Series of the games were also played in Manhattan, Philadelphia, Washington, Baltimore, Chicago, and Memphis. Dr. Lasker won, the final score on April 9 being: Dr. Lasker 8, Marshall 0, drawn 7.

The revival of the international cable matches between America and Great Britain was another feature of the year and the Sir George Newnes trophy, held by the Brooklyn Chess Club for eight years, was recovered by the City of London Chess Club by a score of 5½ to 4½, on February 22 and 23.

The fifteenth annual tournament between Columbia, Harvard, Yale and Princeton, held in New York during the Christmas holidays, was won by Columbia with a score of 11½ out of a possible 12. The winning team comprised J. R. Capablanca, L. J. Wolff, H. Blumberg and O. Brown. Harvard finished second with 8 points, Princeton third with 3½ and Yale last with one point.

A tie between Brown University and the University of Pennsylvania, at 5 points each out of a possible 8, was the outcome of the eighth annual meeting of the Triangular College Chess League held just before the new year. Cornell finished third with 2 series won and 6 lost.

On February 12, the championship tournament of the New York State Chess Association, with ten entries, resulted in the victory of Julius Finn, who scored 3½ points in four rounds. A tie for second place at 2½ points each resulted between H. Helms, P. Johner and C. Jaffe. The general tournament, with 12 entries, was won by J. H. Taft, Jr., of the Polytechnic Preparatory School of Brooklyn, after a tie with J. Patay. Other prizes were won by F. F. Russell, third; O. W. Field and B. Bernstein, fourth and fifth.

A match for the woman's chess championship of the United States was played between Mrs. C. P. Frey of Newark, N. J., and Mrs. S. R. Burgess of St. Louis, Mo., at the Martha Washington Hotel, New York, March 2 to 9. It resulted in favor of Mrs. Burgess, the challenger, by the score of 4 wins, 1 loss and 1 draw.

On March 23, the Universities of America and England played by cable for the seventh time. America, represented by players from Columbia, Harvard and Yale, scored 3 points, as did Great Britain, represented by Oxford and Cambridge. The match went on record as a tie and the Isaac L. Rice trophy remained abroad.

The tournament of the Greater New York Interscholastic Chess League was concluded on March 16, with the Brooklyn Boys' High School winner of the I. L. Rice trophy.

The annual championship tournament of the Manhattan and Brooklyn Clubs were won by Paul Johner and Charles Curt, respectively. On May 30 the Manhattan Chess Club defeated the Franklin Chess Club of Philadelphia by 10½ to 5½.

Members of the New York State Chess Association indulged in a novel contest during the week of August 23-29, when the Rice trophy and general tournaments were held on board the steamship Alexandria, plying between Charlotte, N. Y., and Quebec. State Champion Finn represented the association and won the trophy. D. F. Searle, of Rome, N. Y., and H. Zirn, of Brooklyn, tied for first place in the general contest.

E. Michelsen, of Chicago, won the championship of the Western Chess Association, held at Excelsior, Minn., August 19-25. J. Daniels, Kansas City, was second. The Mississippi State meeting at Castalian Springs was won by M. D. McGrath, of Brookhaven.

Of the principal international tournaments held abroad, G. Shories, of England, won the amateur event at Ostend; Dr. S. Tarrasch, of Germany, the Masters Championship at Ostend, and A. Rubinstein, of Russia, and Dr. O. S. Bernstein, of Germany, tied for chief honors in the General Masters' tournament there. A Rubenstein won the tournament at Carlsbad; Jacques Mieses, of Germany, won at Vienna; F. J. Marshall, of America, at the Café de la Regence in Paris; and P. S. Leonhardt, of Germany, at Copenhagen.

Under the auspices of the *American Chess Bulletin*, Dr. E. Lasker and F. J. Marshall both made extensive tours of the United States.

The American Turf.

(Revised to December 1, 1907.)

Aside from the very successful season at the Metropolitan tracks and the interesting features of local interest, the turf year for the thoroughbreds was especially marked in the success of Richard Croker, who won the English Derby with a horse of American breeding and an American jockey; the wonderful career of the peerless Colin, and the stable winnings of James R. Keene, which aggregated slightly above \$400,000—the largest amount ever won by any one owner in the world.

Two other Americans, aside from Mr. Croker, have won the Derby—Pierre Lorillard with Iroquois, in 1881, and the late William C. Whitney with Volodyoski, in 1901, but these were not of the owners' breeding. Orby, the chestnut son of Orme and the American mare Rhoda B., was bred by Mr. Croker, who also headed the list of winning owners on the Irish turf for 1907.

A large part of Mr. Keene's winnings came from three of the great horses of the year—Colin, \$131,000; Peter Pan, \$87,000, and Ballot, \$59,000. The Duke of Portland held the former record of \$369,292 won in 1889, a large part by Donovan, a three-year-old by Galopin-Mowerina, \$193,355 won in eight starts of seven victories and one second; Ayrshire, \$100,425, and Semolina, \$45,032. The record of Colin as compared with his grand sire, Domino, in 1893 follows, it being remembered, however, that the Futurity of that year was worth \$49,350 and other stakes were also richer. Miller had all the mounts on Colin, except in the Eclipse, when Mountain was up.

**Football.**

The football season of 1907, while the most successful ever known in point of attendance and general results, also showed many great surprises in the strength developed by teams heretofore classed as minor elevens. Nearly all the important teams were either defeated or suffered from reversals in playing strength. Yale, in the East, Chicago, in the West, and Vanderbilt, in the South, seem to have the best claim for championship honors. The results in all important games follow, the first column of figures being the score of the colleges whose names lead in each series:

Squash.

The annual tournament for the American championship was held at Tuxedo Park, N. Y., under the auspices of the Tuxedo Tennis and Racquet Club, November 28-30, and Reginald Finck, New York T. and R. Club, won by default from Pierre Lorillard, Jr. Mr. Finck secured permanent possession of the trophy, having won the tournaments of 1905 and 1906. Former winners were: 1900, Eustace H. Miles; 1901, William Post; 1902 and 1903, George I. Scott; 1904, W. P. Blagden.

## Motor Boats.

Great activity with remarkable speed trials and ocean races which gave a thorough test of the seaworthy qualities of motor boats marked the season of 1907. The races at Palm Beach early in the year, followed by the success of the Dixie abroad, the Monaco events, and the Marblehead and Bermuda races, closing with the contests of the Motor Boat Club of America on the Hudson, were among the features. Principal events follow:

### AMERICAN RECORDS.

## INTERCOLLEGIATE CHAMPIONSHIP.

The Intercollegiate Cross-Country Championship was held at Princeton, November 27, and Cornell won for the eighth time in the nine years this event has been held. Guy Haskins, Pennsylvania's wonderful distance runner, finished first, covering the 6¼ miles in 35m. 9 1-5s., or 19 2-5s. better time than L. P. Jones, of Pennsylvania, winner in 1906. Six Cornell men finished among the first thirteen in a field of sixty-eight contestants. The new rule required six on each team to count in the scoring. The first thirteen were: G. Haskins, Pennsylvania, 35m. 9 1-5s.; J. P. Halstead, Cornell, 35m. 21s.; J. V. Colpitts, Cornell, 35m. 22s.; G. H. Whitely, Princeton, 35m. 32s.; P. L. Trube, Cornell, 36m. 7s.; H. C. Young, Cornell, 36m. 15s.; L. P. Jones, Pennsylvania, 36m. 18s.; J. Quigley, Pennsylvania, 36m. 19s.; M. Boyle, Pennsylvania, 36m. 24 2-5s.; E. Hunger, Cornell, 36m. 34s.; W. Stube, Syracuse, 36m. 34s.; R. Spitzer, Yale, 36m. 48s.; E. E. Seelye, Cornell, 36m. 54s. The team score by points was: Cornell, 39; Pennsylvania, 61; Yale, 135; Syracuse, 173; Harvard, 182; Columbia, 227; Massachusetts Technology, 228; Princeton, 231.

## NEW ENGLAND CHAMPIONSHIP.

The ten-mile cross-country championship of New England was decided November 28 at Lynn, Mass., and first prize fell to Joseph J. Lee, of Somerville, Mass. His time for the course was 57m. 44s. Lee's victory was very close, for Robert W. Fowler, of the Cambridgeport Gymnasium, was within a yard of him as he crossed the line.

## Sporting Addenda.

## SHOOTING.

Shooting—Dr. W. G. Hudson, New York, made a world's record of 1,165 out of a possible 1,200 points on a ring target at 200 yards, fifty consecutive shots. Dr. Hudson holds the record of 2,301 for 100 shots, same distance. Capt. A. H. Hardy hit 13,066 flying targets without a miss at Lincoln, Neb., November 19.

## ATHLETICS.

The standing of colleges in recent years has been as follows: 1901—Harvard, Yale, Princeton, Cornell. 1902—Harvard, Yale, Princeton, California. 1903—Yale, Harvard, Cornell, Princeton. 1904—Yale, Harvard, Pennsylvania, Cornell. 1905—Cornell, Yale, Harvard, Pennsylvania. 1906—Cornell, Pennsylvania, Harvard, Yale.

## A. A. U. CHAMPIONSHIPS.

The A. A. U. boxing championships were held in Boston, April 29-30, with the following results: 105-pound class—John J. O'Brien, Boston; 115-pound class—Henry Meiers, Boston; 125-pound class—P. F. Fitzpatrick; 135-pound class—J. J. Doyle, New York; 145-pound class—W. S. Kirland, Boston; 155-pound class—William McKennon, Boston; heavyweight class—Emory Payne, New York.

## Automobile Industry.

October 1, 1907, marked the close of the automobile selling season, which was the most successful in the history of the industry. There were in use in the United States 175,000 pleasure vehicles of various models and horse power and 18,000 commercial vehicles, both gasoline and electric. These cars in use ranged in price from \$350 to \$6,500 for American-built runabouts; \$1,000 to \$6,500 was the range for American-built touring cars, and from \$4,500 to \$12,000 for touring cars and runabouts of foreign manufacture. The estimated valuation of all types of motor driven vehicles in use is \$370,000,000.

### PRODUCTION IN THE UNITED STATES.

The estimated production of automobiles of the entire industry is placed at 55,000 machines, as against 40,000 for the preceding year. The approximate value of this output is \$110,000,000. The capital employed in the automobile industry is approximately \$90,000,000. Nearly every manufacturer of importance has increased the size of their plants during the year, and their ranks have been augmented by over fifty new corporations chartered for the manufacture of automobiles and motors.

### IMPORTS AND EXPORTS.

Total valuation of the cars imported from January 1, 1906, to November 1, 1907, is given at \$4,064,249.84. The total valuation of the cars exported from June, 1906, to June, 1907, is \$5,502,241.

### IMPROVEMENTS AND PRICES.

There has been practically no radical change in the construction of horseless vehicles during the year just past. Any notable changes have been in the nature of betterments in and refinements of detail. The most marked change has been in the increase of the power plants of the cars, this taking the form of increased cylinder dimensions in four-cylinder types, and the production by many manufacturers of six-cylinder machines. The gentlemen's roadster type of car and light cylinder runabout also made remarkable strides during the year.

Prices in many instances were increased on account of the increased cost of material and labor and the adoption of higher grades of steel by the manufacturers.

### COMMERCIAL VEHICLES.

Great progress has been made by the manufacturers of this type of automobile, and many plants throughout the United States have been erected for their exclusive manufacture. Their efficiency in the matter of work and small cost of operation has been established, and many great corporations are substituting them for horse-drawn vehicles. Heretofore electrically propelled commercial vehicles have had the call, but during the past year gasoline commercial machines have proved by their greater mileage capacity their superiority for the work calling for long distances and speedy travel. So enormous is the field for the commercial type of automobile, that manufacturers of pleasure vehicles have already laid aside plans to meet the demands.

### MOTOR TRAFFIC.

The taximeter cab service now in operation in New York City opens a new field for the American automobile manufacturer, as this up-to-date service of motor cabs that will carry taximeters to determine the fares, much on the lines of those at present running in Paris and London, promises to be popular throughout the country, and seems destined to shortly replace the horse-drawn cab.

To meet the demand of this most popular type of vehicle several American manufacturers have already started their production.

### ROADS AND LEGISLATION.

Federal statistics show there are more than 2,151,570 miles of public highways in the United States. Of this mileage 108,232.9 miles are surfaced with gravel, 38,621.7 miles with stone, and 6,809.7 miles with special materials, such as shells, sand, clay, oil and brick, making in all 153,664.3 miles of improved road. From this it follows that 7.14 per cent. of all the roads in this country have been improved.

The Automobile Club of America and every club of prominence throughout the United States have been untiring in their efforts to secure good roads and just laws for uses of automobiles. Special endeavors have been made by the Legislative Board of the American Automobile Association to obtain Federal registration.

### AUTOMOBILE SHOWS.

Shows exhibiting 1908 cars were held earlier than usual. The American Motor Car Manufacturers' Association held its show at the Grand Central Palace in October, 1907, and the eighth national show under the auspices of the Association of Licensed Automobile Manufacturers was held early in November, 1907, at Madison Square Garden; the Chicago show, November 30 to December 7, 1907, under the auspices of the National Association of Automobile Manufacturers, and the Importers' Automobile Salon at Madison Square Garden, December 28, 1907, to January 4, 1908.

## AUTOMOBILE EVENTS.

The annual competition for the William K. Vanderbilt Cup was abandoned because adequate police protection could not be secured. The Glidden Tour, the Sealed Bonnet Contests and the Reliability Runs were marked by the great number of cars which were awarded perfect scores. The twenty-four-hour races were the most prominent of all racing events held during the year, and were so popular that there are plans on foot for several motordromes to be exclusively devoted to this spectacular sport. The relay record was made at Detroit, the distance covered in twenty-four hours being 1,135 miles, made by American-built cars. The single car record made at Morris Park by a foreign-made car stands at 1,079 miles.

The trade is organized as follows:

## Marriage and Divorce Laws.

(Revised to December 1, 1907.)

**Marriage Licenses.**—Required in all the States and Territories except Alaska, New Jersey (if residents, otherwise required), New Mexico and South Carolina. California requires man and woman to appear and be examined under oath.

**Marriage, Prohibition of.**—Marriages between whites and persons of negro descent are prohibited and punishable in Alabama, Arizona, Arkansas, California, Colorado, Delaware, Florida, Georgia, Idaho, Indiana, Indian Territory, Kentucky, Louisiana, Maryland, Mississippi, Missouri, Nebraska, North Carolina, Oklahoma, Oregon, South Carolina, Tennessee, Texas, Utah, Virginia, and West Virginia.

Marriages between whites and Indians are void in Arizona, North Carolina, Oregon, and South Carolina; and between whites and Chinese in Arizona, California, Mississippi, Oregon, and Utah. Marriage between first cousins is forbidden in Alaska, Arizona, Arkansas, Illinois, Indiana, Indian Territory, Kansas, Missouri, Nevada, New Hampshire, North Dakota, Ohio, Oklahoma, Oregon, Pennsylvania, South Dakota, Washington, and Wyoming, and in some of them is declared incestuous and void, and marriage with step-relatives is forbidden in all the States except Florida, Hawaiian Islands, Iowa, Kentucky, Minnesota, New York, Tennessee, Wisconsin.

Connecticut and Minnesota prohibit the marriage of an epileptic, imbecile, or feeble-minded woman under 45 years of age, or cohabitation by any male of this description with a woman under 45 years of age, and marriage of lunatics is void in the District of Columbia, Kentucky, Maine, Massachusetts, Nebraska, persons having sexual diseases in Michigan.

**Marriage, Age to Contract, Without Consent of Parents.**—In most of the States which have laws on this subject 21 years is the age for males; in California, Delaware, Idaho, and North Dakota, 18; in Tennessee, 16; and for females 21 years in Florida, Iowa, Kentucky, Louisiana, Minnesota, Montana, Nebraska, North Carolina, Pennsylvania, Rhode Island, South Carolina, Kansas, South Dakota, Utah, Virginia, West Virginia, Wisconsin, and Wyoming, and 18 in all the other States having laws, except Delaware, District of Columbia, Idaho, Maryland, New York, and Tennessee, in which it is 16 years, and California and North Dakota, 15.

Illinois and Kansas, common law marriages null and void. Connecticut, neglect to support wife is felony.

### Law of Contracts.

**A contract is an agreement of two or more parties**, by which reciprocal rights and obligations are created. One party acquires a right, enforceable at law, to some act or forbearance from the other, who is under a corresponding obligation to thus act or forbear.

Generally speaking, all contracts which are made between two competent parties, for a proper consideration, without fraud and for a lawful purpose, are enforceable at law.

**To the creation of a valid contract** there must be:

1. Precise agreement. The offer of one party must be met by an acceptance by the other, according to the terms offered.

2. There must be a consideration. Something of value must either be received by one party or given up by the other.

3. The parties must have capacity to contract. The contracts of insane persons are not binding upon them. Married women are now generally permitted to contract as though single, and bind their separate property. The contracts of an infant are generally not binding upon him, unless ratified after attaining his majority. The contracts of an infant for "necessaries" may be enforced against him to the extent of the reasonable value of the goods furnished. It is incumbent upon one seeking thus to hold an infant to show that the goods furnished were in fact necessary to the infant, and that he was not already supplied by his parents or guardians.

4. The party's consent must not be the result of fraud or imposition, or it may be avoided by the party imposed upon.

5. The purpose of the parties must be lawful. Agreements to defraud others, to violate statutes, or whose aim is against public policy, such as to create monopolies, or for the corrupt procurement of legislative or official action, are void, and cannot be enforced by any party thereto.

**Contracts in general are equally valid, whether made orally or in writing**, with the exception of certain classes of contracts, which in most of the States are required to be attested by a note or memorandum in writing, signed by the party or his agent sought to be held liable. Some of the provisions, which are adopted from the old **English Statute of Frauds**, vary in some of the States, but the following contracts very generally are required to be thus attested by some writing:

Contracts by their terms not to be performed within a year from the making thereof.

A promise to answer for the debt, default, or miscarriage of another person.

Contracts made in consideration of marriage, except mutual promises to marry.

Promise of an executor, or administrator, to pay debts of deceased out of his own property.

Contracts for the creation of any interest or estate in land, with the exception of leases for a short term, generally one year.

Contracts for the sale of goods above a certain value, unless a portion of the price is paid or part of the goods delivered. The required value of the goods sold varies in different States from \$30 to \$200. In a number of the States no such provision exists.

In many of the States declarations or conveyances of trust estates.

In many States representations as to the character, credit, or responsibility of another person.

**Partial performance of the contract** is generally held to dispense with the necessity for a writing.

**If the damages liable to result from the breaking of a contract are uncertain**, the parties may agree upon a sum to which either may be entitled as compensation for a breach, which will be upheld by the courts, but if the sum so fixed is not designed as a fair compensation to the party injured, but as a penalty to be inflicted, it will be disregarded.

**A party is generally excused for the failure to perform** what he has agreed only by the act of God or the public enemy. Except in cases involving a personal element in the work to be performed, such as the rendition of services, when the death or sickness of the party contracting to perform them is a valid excuse, or contracts for the performance of work upon a specified object, when its destruction without the fault of the party sought to be held liable is a sufficient excuse.

### Wills.

**A WILL OR TESTAMENT** is a final disposition of a person's property to take effect after his death. A codicil is an addition or alteration in such disposition. All persons are competent to make a will except idiots, persons of unsound mind, and infants. In many States a will of an unmarried woman is deemed revoked by her subsequent marriage. A nuncupative or unwritten will is one made orally by a soldier in active service, or by a mariner while at sea.

In most of the States a will must be in writing, signed by the testator, or by some person in his presence, and by his direction, and attested by witnesses, who must subscribe their names thereto in the presence of the testator. The form of wording a will is immaterial as long as its intent is clear.

**Age at which persons may make wills** is in most of the States 21 years. Males and females are competent to make wills at 18 years in the following States: California, Connecticut, Hawaiian Islands, Idaho, Montana, Nevada, North Dakota, Oklahoma, South Dakota, Utah; and in

## WILLS—Continued.

the following States only females at 18 years: Colorado, District of Columbia, Illinois, Maryland, Missouri, Washington, Wisconsin.

In the following States persons of 18 years may dispose of personal property only: Alabama, Arkansas, Missouri, Oregon, Rhode Island, Virginia, West Virginia; in Georgia any one over 14 years and in Louisiana any one over 16 years is competent to make a will. In Colorado persons of 17 years and in New York males of 18 and females of 16 years may dispose of personalty. **WITNESSES**—Most of the States require two witnesses, except in Connecticut (3), District of Columbia (3), Maine (3), Massachusetts (3), New Hampshire (3), South Carolina (3), Vermont (3).

**Acknowledgment of Deeds.**

**AN ACKNOWLEDGMENT** is the act of declaring the execution of an instrument before an officer authorized to certify to such declaration. The officer certifies to the fact of such declaration, and to his knowledge of the person so declaring. Conveyances or deeds of land to be entitled to be recorded must first be acknowledged before a proper officer. Most of the States have forms of acknowledgments, which should be followed.

Acknowledgments may be taken in general by Notaries Public, Justices of the Peace, Judges or Clerks of Courts of the higher grades, Registers, Masters in Chancery, Court Commissioners, Town Clerks, Mayor and Clerks of incorporated cities, within their respective jurisdictions.

The requisites to a valid deed are the same in general as other contracts, but the appointment of an attorney to execute a deed for another person must in general be executed with the same formalities requisite to the deed itself.

**SEALS** or their equivalent (or whatever is intended as such) are necessary in Alaska, Connecticut, Delaware, District of Columbia, Florida, Idaho, Illinois, Maine, Maryland, Massachusetts, Michigan, Minnesota, Missouri, New Hampshire, New Jersey, New York, North Carolina, Oregon, Pennsylvania, South Carolina, Vermont, Virginia, West Virginia, Wisconsin, Wyoming. In almost all the States deeds by corporations must be under seal. Forms are prescribed or indicated by the statutes of most of the States except Connecticut, Florida, Louisiana. **SEPARATE ACKNOWLEDGMENT** by wife is required in Alaska, Arkansas, Delaware, District of Columbia, Florida, Georgia, Idaho, Kentucky, Louisiana, Montana, Nevada, New Jersey, North Carolina, Oregon, Pennsylvania, South Carolina, Tennessee, Texas. **ONE WITNESS** to the execution of deeds is required in District of Columbia, Maine (customary), Maryland, Nebraska, New Jersey (usual), Oklahoma, Utah, Wyoming. **TWO WITNESSES** to the execution of deeds are required in Arkansas, Connecticut, Florida, Georgia, Louisiana, Michigan, Minnesota, New Hampshire, Ohio, Oregon, South Carolina, Texas, Vermont, Wisconsin.

**Promissory Notes and Checks.**

**Negotiable instruments**, the common forms of which are promissory notes, checks, or other bills of exchange, while having the same general requisites as other contracts, have certain distinct features. The purpose of the law is to facilitate as much as possible their free passing from hand to hand like currency. The assignment of an ordinary contract leaves the assignee in no different position for enforcing his rights than that of his assignor, but one who takes a negotiable instrument from a prior holder, without knowledge of any defences to it, before its maturity, and gives value for it, holds it free of any defences which might have been set up against his predecessors, except those defects that were inherent in the instrument itself.

**To be negotiable** an instrument must be in writing and signed by the maker (of a note) or drawer (of a bill or check).

**It must contain** an unconditional promise or order to pay a sum certain in money.

Must be payable on demand, or at a fixed future time.

Must be payable to order or to bearer.

In a bill of exchange (check) the party directed to pay must be reasonably certain.

Every negotiable instrument is presumed to have been issued for a valuable consideration, and want of consideration in the creation of the instrument is not a defence against a bona-fide holder.

**An instrument is negotiated**, that is completely transferred, so as to vest title in the purchaser, if payable to bearer, or indorsed simply with the name of the last holder, by mere delivery, if payable to order by the indorsement of the party to whom it is payable and delivery.

One who transfers an instrument by indorsement warrants to every subsequent holder that the instrument is genuine, that he has title to it, and that if not paid by the party primarily liable at maturity, he will pay it upon receiving due notice of non-payment.

**To hold an indorser liable** the holder upon its non-payment at maturity must give prompt notice of such non-payment to the indorser and that the holder looks to the indorser for payment. Such notice should be sent within twenty-four hours.

**When an indorser is thus compelled to pay** he may hold prior parties through whom he received the instrument liable to him by sending them prompt notice of non-payment upon receiving such notice from the holder.

One who transfers a negotiable instrument by delivery, without indorsing it, simply warrants that the instrument is genuine, that he has title to it, and knows of no defence to it, but does not agree to pay it if unpaid at maturity.

**The maker of a note is liable** to pay it if unpaid at maturity without any notice from the holder or indorser.

Notice to one of several partners is sufficient notice to all.

**When a check is certified** by a bank the bank becomes primarily liable to pay it without notice of its non-payment, and when the holder of a check thus obtains its certification by the bank, the drawer of the check and previous indorsers are released from liability, and the holder looks to the bank for payment.

**A bona-fide holder** of a negotiable instrument, that is, a party who takes an instrument regular on its face, before its maturity, pays value for it and has no knowledge of any defences to it, is entitled to hold the party primarily liable responsible for its payment, despite any defences he may have against the party to whom he gave it, except such as rendered the instrument void in its inception. Thus, if the maker of a note received no value for it, or was induced to issue it through fraud or imposition, they do not defeat the right of a bona-fide holder to compel its payment from him.

**The following States have enacted** a similar Negotiable Instrument Law: Colorado, Connecticut, District of Columbia, Florida, Maryland, Massachusetts, North Carolina, North Dakota, Pennsylvania, Oregon, Rhode Island, Utah, Virginia, Washington, Wisconsin, New York, and Tennessee—and the same general rules apply in all the States.

**Distribution of Intestate's Personal Estate.**

The following is a synopsis of the laws of the various States providing for the distribution of the personal estate of a deceased after the payment of funeral expenses and other debts where there is no will:

In many of the States the widow and children are entitled to receive a small portion of the estate, generally varying from \$100 to \$500, before the claims of creditors are paid. Aside from such exempt portion of the estate, the property to be distributed to the widow or relatives is that remaining after all creditors' claims have been satisfied.

The following is the plan of distribution of a male's property. The same rules apply to a female's estate, except in some States, where the rights of a husband in the estate of his deceased wife differ from those of a wife in the estate of her deceased husband, which will be shown in a separate table.

I. In all States where the deceased leaves a child or children, or descendants of any deceased child, and no widow, the children or descendants take the entire estate, to the exclusion of all other relatives. The children take equal shares, and in most States the descendants of a deceased child together take the share of their parent, except where the descendants are all in equal degree to the deceased (all grandchildren, no children surviving), when they share equally and do not take their proportionate share of their parent's interest.

No statement is given in this synopsis of the law of Louisiana, which, being founded on the provisions of the French code and Roman law instead of the English common law, which is the underlying principle in the other States, differs in many respects from the principles followed in the other States, especially on the question of the rights of a husband and wife in each other's property and in the property acquired by the husband and wife during their married life. The provisions of the law of Indiana are also not included, for the reason that for an accurate statement of its provisions a reading of the entire statute is necessary, together with the decisions of the Indiana courts construing its provisions, which would occupy too much space for a statement here.

II. (a) If deceased leaves a widow, and no children or descendants, the widow takes all. This is the rule in Alabama, Arizona, Colorado, Florida, Georgia, Illinois, Kansas, Minnesota, Mississippi, New Mexico, Ohio, Oregon, Tennessee, Texas, Washington, West Virginia, and Wisconsin.

(b) In the following States the widow takes one-half, the residue being taken by the other relatives in the manner and proportion in which they take the entire estate when the deceased leaves neither widow or descendants (given below): Arkansas, California, Delaware, District of Columbia, Idaho, Iowa, Kentucky, Maine, Maryland, Missouri, Montana, Nevada, New Jersey, North Carolina, Oklahoma, Pennsylvania, Rhode Island, South Carolina, South Dakota, and Virginia.

(c) In Massachusetts, North Dakota, and Utah the widow takes the entire estate up to \$5,000 and one-half of the residue.

(d) In Connecticut and Vermont the widow takes the entire estate up to \$2,000 and one-half the residue.

(e) In New York, in case deceased leaves a father surviving, the widow takes one-half; if no father surviving, the widow takes one-half and \$2,000 in addition.

(f) In New Hampshire the widow takes \$1,500, and, if the estate exceeds \$3,000, one-half of the residue.

(g) In Wyoming the widow takes the entire estate up to \$10,000 and three-fourths of the residue.

(h) In Nebraska the widow takes the use of the entire estate for her life.

(i) In Michigan the widow takes the entire estate up to \$3,000 and one-half of the residue.

III. ## Benefactions of 1907.

The sum total of public and charitable bequests of 1907 does not, apparently, much exceed one-half of the amount thus disposed of in 1906, when the total announced gifts reached \$100,000,000. The financial flurry, which began in October, closed the lid on many a strong-box which would otherwise have opened freely toward the holiday, or "bountiful season," in behalf of the good of humanity at large.

The chief gifts made public during the year were:

Andrew Carnegie: \$750,000 toward a \$1,000,000 home for the Bureau of American Republics at Washington, the United States Government having already subscribed \$200,000; \$500,000 for the establishment of twenty free branches of the Enoch Pratt Library at Baltimore; \$50,000 to Lafayette College, at Easton, Pa., \$6,000,000 additional endowment to the Carnegie Institute, Pittsburgh; \$125,000 to the Western Reserve University, at Cleveland, Ohio; \$500,000 to the fund of King's Hospital, London, England.

John D. Rockefeller: \$2,917,000 to his Chicago University; \$3,000,000 for annuities of superannuated professors at the University of Chicago; \$200,000 to the Baptist Missionary Union; \$300,000 to Yale University; \$600,000 to Chicago University Library; \$2,600,000 to the Rockefeller Institute for Medical Research in New York City, for use in furthering the important contributions of the institute to bacteriological knowledge.

Mrs. Russell Sage: \$1,000,000 to Emma Willard Seminary, at Troy; \$1,000,000 to the Rensselaer Polytechnic Institute, at Troy; \$115,000 to public school at Sag Harbor, L. I.; \$10,000,000 to a "Sage Foundation", for social betterment; \$350,000 to the Y. M. C. A.; \$150,000 to the American Seaman's Friend Society; \$150,000 to Northfield Seminary, Mass.; \$200,000 to the Sage Institute of Pathology, attached to the City Hospital on Blackwell's Island; \$250,000 to a home for indigent females; \$100,000 to Syracuse University.

Charles L. Farrington, of Boston: \$200,000 to vacation trips for poor children; \$50,000 to Harvard University.

John C. Frye, of Boston: \$200,000 to Tuft's College.

Otto Young, of Chicago: \$250,000 to charities.

S. W. Bowne, of New York: \$100,000 to Syracuse University.

Mrs. Thomas J. Emory, of Cincinnati: \$100,000 to public art museum.

Daniel Osiris, a Greek merchant, of Paris, France: \$5,000,000 to the Pasteur Institute.

Jacob H. Schiff, of New York: \$50,000 to the Hebrew Sheltering Home.

M. Audrac, of Luc, France: \$300,000 to the Pasteur Institute.

Unknown donor: \$100,000 to the Chair of Chemistry, University of Pennsylvania.

Unknown donor: \$100,000 to the New York Presbytery.

Unknown donors: \$1,000,000 to Teachers' College of New York.

John A. Creighton, of Omaha, Neb.: \$900,000 to various colleges.

Ambrose K. Ely, of Livingston, N. J.: \$80,000 to charities.

J. G. Schmidlapp, of Cincinnati: \$250,000 for a young women's home. (Gift suggested by the case of Evelyn Thaw.)

E. P. Dwight, of Philadelphia: \$200,000 to religious purposes.

Mlle. Louise H. Leclere, of New York: \$200,000 for the elevation of public morals.

E. S. Ellsworth, of Marshalltown, Iowa: \$250,000 to Ellsworth College.

Mrs. George Straut, of New York: \$500,000 to churches, schools and homes.

Mrs. Grace Redpath, of London: \$150,000 to McGill University, Toronto.

Unknown donor: \$200,000 to Union Theological Seminary, New York.

Unknown donor: \$1,200,000 to Princeton University.

F. P. Fernald: \$600,000 to Columbia University and girls' societies.

Miss Eliza O. Ropes: \$2,000,000 to Harvard and other schools.

Miss Anna T. Jeanes, Quakeress, of Philadelphia: \$1,000,000 to the education of negroes; also \$1,000,000 to Swarthmore College, on condition athletics be abolished at the institution. The trustees are holding the offer under advisement.

John Porterfield, of Pittsburgh: \$1,000,000 to the poor.

Benjamin Thaw, of Pittsburgh: \$50,000 to education.

Mrs. James A. Bailey, widow of the showman: \$100,000 to Mount Vernon, New York, for a hospital.

Albert Willcox, of New York: \$357,000 to the Audubon Society, for the preservation of birds.

W. K. Vanderbilt, Sr.: \$100,000 to Vanderbilt University, Nashville, Tenn.

Captain James H. Hooker, of Rochester, N. Y.: \$250,000 to the United States Government.

Prescott Keyes, of Concord, Mass.: \$300,000 each to Harvard and Tuskegee Institutes and to the Waltham (Mass.) Hospital.

John M. Burke, of New York: \$4,000,000 to a home for convalescents.

George Westinghouse: \$150,000 to the Pittsburgh Y. M. C. A.

D. Willis James, of New York: \$1,000,000 to leading universities.

Archdeacon C. C. Tiffany, of the P. E. Church, New York: \$100,000 to the deaconesses.

Thomas R. Proctor, of Utica, N. Y.: \$500,000 for public parks.

Robert N. Carson, of Philadelphia: \$5,000,000 to found "Carson College," for girls, at Philadelphia, on the plan of Girard College, for boys.

Miss Florence Lyman, of Boston: \$250,000 to charities.

W. W. Astor: \$500,000 to Oxford University, England.

## Electrical Progress in 1907.

### IN GENERAL.

While in some respects the progress in 1907 was not so phenomenal as during the preceding year, it was more substantial because more conservative. The money stringency in the latter half of the year affected the producing industries, but did not seriously retard the general advance. Assuming a 10 per cent. increase, the electrical apparatus produced in this country was probably worth \$275,000,000. The earnings of public utility corporations, estimated from the two preceding years, were at least \$1,000,000,000, so that the combined cost of electrical service and goods in this country easily totalled \$1,250,000,000. Electric railways still represent the largest investments and earnings, the capitalization being about \$4,000,000,000, and the combined revenues last year over \$1,000,000 a day, or approximately 10 per cent. more than in 1906. Proportionately, electric lighting advanced even more, and the business is now close to one-half that of street railways. Many companies reported a 25 per cent. increase. Incandescent lamp sales were about that amount greater and current sales still greater. Telephone business was also greatly increased, and the trend in all three fields was lower cost, higher economy, and better service. Export trade in all lines was better than ever, and the value of electrical instruments and machinery exported probably ran well into \$10,000,000. In scientific achievement the field of electro-metallurgy was most prominent.

Household applications of electricity were much extended. Electric radiators, cooking utensils, flat irons, and motors for driving sewing machines, washing machines, coffee grinders, meat choppers, freezers, etc., are now available at moderate prices, and cheap current is more widely distributed. An electrical device that became of notable industrial importance was the lifting magnet for handling heavy pieces of iron and steel, or numbers of loose pieces, in connection with cranes and hoists, where it takes the place of hooks or slings, and saves time in loading and unloading.

### TELEGRAPHY AND TELEPHONY.

A serious impediment to the extension of the existing telegraph companies in the United States was the strike of the Commercial Telegrapher's Union last Summer, which severely hampered the service and reduced the profits. It may, however, prove a benefit to projected companies. One of these, the New American Union Telegraph Company, prepared to begin operations the first of this year transmitting telegrams over leased telephone wires by a method that allows using them for both purposes. Another, the Telepost Company, will in part use telephone wires also. Greatly increased transmitting speed by the use of the Delany apparatus is the feature of the Telepost system. Heretofore rapid mechanical telegraphy was limited by the static effect or capacity of the line, but this characteristic is utilized by the Delany system and becomes an advantage instead of an obstacle. Another advantage is independence of weather conditions and outside magnetic or electric disturbances. Last year the Telepost Company was organized and will shortly open its first section. The system was practically tested for over a year and proved its ability to transmit 1,000 words a minute. One wire will send the work of a number of operators, who can be simultaneously preparing the messages for transmission. With the present quadruplex sending two messages each way at one time it would require seventeen wires to do the work of one Telepost wire.

Commercial service between Nova Scotia and Ireland by the Marconi wireless system was inaugurated October 18. Nearly five years ago the first message was sent across the Atlantic Ocean, and commercial service was attempted two years ago, but abandoned because the apparatus was not sufficiently powerful and sensitive. Daylight transmission is now nearly as satisfactory as sending by night. Experimental wireless stations were erected in France to test the Arton system, and a Slaby-Arco wireless station was established at Tsingtau, China, by the German Government. Wireless telegraphy proved no serious competitor of the cable as evidenced by the new cables laid last year. It is believed that it will only partly relieve the congested traffic on the existing thirteen transatlantic cables. The new cables were one from Manila to Shanghai, laid by the Commercial Cable Company last Spring, and a direct cable from New York to Havana, opened October 14. The Central and South American Cable Company placed its New York to Colon cable in operation September 1.

Automatic exchanges, as operated by the independent telephone companies, were more in evidence than ever. Some 74 cities in this country have adopted the automatic system. Another independent development is the Clement-Automannual, a semi-automatic system, and the initial installation was ordered for Ashtabula, Ohio. It is adapted for use in conjunction with any central energy manual system now in operation. A call is connected by manipulating a keyboard similar to that of an adding machine, and no cords or plugs are used. It claims speed, accuracy, secrecy, and economy. From 40 to 80 per cent. fewer operators are required than for a purely manual system. Between Columbus and Dayton, Ohio, successful experiments were tried for the first time in long-distance telephony through automatic exchanges. Telephonic communication was officially opened July 10 between Melbourne and Sydney, Australia, over 600 miles.

The success had with De Forest wireless telephones on two United States battleships led to the decision to place the apparatus on some of the vessels of the fleet going to the Pacific this year. A speaking range of five miles is guaranteed in all weathers, and 22 miles was covered in one test. Between Berlin and Nauen, Germany, speech was transmitted 12 miles by wireless telephony. A new system of wireless telephony employs a hydraulic microphone transmitter invented by Prof. Majorana, an Italian, and reported good results. (See also "Telephone Statistics.")

### ELECTRIC LIGHTING.

New kinds of light or new ways of producing it were not so much in evidence last year as new ways of distributing it. A phase of the art formerly neglected received a big impetus through the Illustrated Engineering Society, which was founded in January, 1906, and now has about 1,000 members. Its principal aim is to correct the evils of most electric light installations, which are wasteful and injurious to the eyes, and it has

## ELECTRICAL PROGRESS IN 1907—Continued.

added much to the available scientific data. Another of its purposes is to bring about an international unit of luminous intensity, which is greatly needed because present standards are not uniform.

Use of high efficiency lighting units increased markedly, these being such as the Nernst and Gem lamps, Moore and Cooper-Hewitt tubes and tantalum and tungsten filament lamps. The Zirconium-tungsten lamp was decidedly improved, the filament breakage being reduced, size of the lamp decreased, and any position made possible. The Sirius colloid lamp, developed by Hans Kuzel, of Vienna, is one of the tungsten variety in which the metal exists in the colloidal state. The advantage is greater flexibility, which decreases the fragility. It claims a life well over 1,000 hours at one watt per candle. A number of new makes of metallic or metallized filament lamps were put on the market during the year, and there was also an increase in the number of flaming arcs offered. The latter are in very extensive use abroad and are being rapidly adopted here as the most efficient form of light known.

A new mercury vapor lamp was offered commercially last year in Germany, having a fused quartz tube in place of a glass tube, which, by permitting higher temperatures, enables a higher illuminating efficiency. The current consumption per candle power is much less, the color is better since red rays appear, the life is longer, and the lamp is much smaller for equal candle power. The light promises to be mainly a competitor of the arc lamp, since its intensity makes it more an outdoor than an indoor illuminant. Another new German lamp, designed to remove the disagreeable color of the mercury vapor light, combines in such a lamp an incandescent carbon filament, which serves to start the vaporization of the mercury.

Although one of the youngest of the electrical industries, the manufacture of incandescent lamps is one of the largest. The estimated output for 1907 was over 200,000,000 lamps, nearly double that of two years ago and nearly eight times that of 1900.

## ELECTRO-CHEMISTRY AND ELECTRO-METALLURGY.

Edison's long-promised storage battery or accumulator was finally offered to the market in December. This has been in process of experimental development for several years, but was withheld until perfected to the inventor's satisfaction. Its principal defects, as applied to automobiles, were limited range of action and lack of ability to withstand jarring, and these, it is claimed, have now been removed.

Several electro-chemical and metallurgical industries were established in England. In London a commercial process of producing electrolytic disinfectant was successfully employed. A solution of sodium and magnesium chlorides, when acted upon by an electric current liberates chlorine in the solution. The disinfectant is used to water roads, market places, etc., and is dispensed to the public for household use. In Germany electrical methods of extracting nitrogen from the air for fertilizers and explosives attracted increased attention. Two large companies prepared to engage in this process. At Nottoden, Norway, a large plant was placed in operation manufacturing nitrate of lime and soda and nitric acid electrically by the Birkland-Byde process. Water purification and sewage sterilization by electricity were both advanced in efficiency last year.

The statement was made last July by Bertram Bloom before the British Institution of Civil Engineers that "at the present time there is more solid progress being made in electro-metallurgy than at any previous time." The manufacturing of iron and steel, aluminum, sodium, and the refining of copper were referred to as the principal such industries. A notable series of experiments with the Heroult electric furnace in reducing iron ores was conducted at Sault Ste. Marie, under the patronage of the Canadian Government, to determine the practicability of electric iron smelting. High-grade alloy steels are now being made in various Austrian plants using the Kjellin, the Keller, and the Heroult electric furnaces. More was heard of the induction type of furnace than before, and it now holds promise of considerable value in metallurgical work. Becket and Price took out several patents on the production of ferro alloys in such an electric furnace.

## ELECTRIC RAILWAYS.

An important factor in the progress of the year was steam railroad electrification, very extensive plans for which were begun. The electrification of the New York terminal of the New York Central and Hudson River Railroad was extended, all of the terminal trains now being operated electrically. The New York, New Haven and Hartford Railroad completed its electrification as far as Stamford, Ct. These two roads afford comparison of the two standard types of equipment—direct current low potential, as used by the New York Central, and single-phase alternating current high potential, as used by the New Haven road. The former operates suburban trains on the multiple unit system, the latter uses locomotives, and both use locomotives for hauling steam trains through the electrified zone. The Pennsylvania Railroad also decided on single phase alternating current, and the first of its locomotives for use through the Hudson and East River tunnels was tested with marked success. Abroad, the Prussian Railway decided to electrify a part of its lines; Bavaria was considering the almost complete use of electricity; the Austrian authorities decided to adopt electricity on the Arlberg Railway, and Berlin's local electric service was considerably extended. Among the numerous electrified urban and interurban roads was the system of the Southern Pacific Railway to connect San Francisco with Oakland, Berkeley, and adjacent points.

While progress was shown in extending local street railways and building new ones, it was not so striking as the increase of interurban service. Several interurban lines have nearly invaded the steam railroad field, and are now operating sleeping, parlor, and freight cars. H. F. Holland, of the Holland Palace Car Company, brought out an improved combination parlor and sleeping car for interurban railways. Five electric roads were equipped last year to use direct current at 1,200 volts.

## POWER AND POWER TRANSMISSION.

Of the various forms of prime movers steam turbines and gas engines were used more than ever, and reciprocating steam engines held their own, but water powers attracted

## ELECTRICAL PROGRESS IN 1907—Continued.

the most attention. The immediate reason is the need of cheaper power, but it is important, too, to conserve the dwindling supplies of coal and other fuels by making use of this inexhaustible natural resource. In this country the developments were more numerous in the West and South, and abroad, particularly where coal is expensive, there was even more attention given to improving available water powers. One of these countries, France, is estimated to have available hydraulic power of between 9,000,000 and 10,000,000 horse power. Germany and Switzerland are foremost in the development of water powers to generate electricity for general industrial purposes and the operation of steam roads which it is intended to electrify. Many notable undertakings are either now under way or the plans matured to be shortly carried into effect. Among them are proposed power dams on the Mohne, the Nidda, the Eder, the Diemel, and the Rhine. Work was begun on a 20,000-horse power hydro-electric plant in Norway to utilize the water of the Ringedalsvand. Tunnels to a length of 16,500 feet will be constructed and 40,000-horse power will be made available.

The most novel power plant of its kind was one built on the Patapsco River, near Ilchester, Md., which was the first to be located within the dam itself. The scheme was possible by using reinforced concrete construction, and is advantageous in that one structure serves a double purpose and the effective head of the water is increased. Natural light and ventilation are secured on the down-stream side, and the conditions within are as comfortable as in any ordinarily located plant.

Electric power in mining operations has advantages which are quite generally appreciated, but there was a notable increase in the number of applications last year. Principally the electricity replaces compressed air, and a better economy is obtained, particularly when storage batteries are used to equalize the load on the generators. A model electrical equipment was that installed last year in the Thiederhall Mines in Germany. The use of electric power was considerably extended in the Lake Superior copper mines.

In the deliberations of the American Institute of Electrical Engineers much attention was given to high tension line construction. The greater economy of large stations emphasizes the desirability of large areas of current distribution. Improved forms of insulators have made higher pressures allowable, so that longer lines may be erected before a prohibitive expense for conductors is reached. The Grand Rapids-Muskegon Power Company's 72,000-volt line, which is 92 miles long and has the highest working voltage in the world, was more successful than expected and afforded valuable data on insulating and supporting such a line. A new type of insulator carries lines by suspension and may mark a departure from old practice. Last Summer's break in the abnormally high price of copper was fortunate for the extension of power transmission systems. The development of Victoria Falls and a 700-mile transmission was still talked of, but its realization remains for the future.

Not all high-tension transmission is by alternating current. For several years the Thury direct current system has been applied with increasing voltages. At last accounts the highest in use was 57,000 volts in a line in France, and another, intended to transmit power to Paris from a hydraulic plant on the Rhone, near the Swiss frontier, was proposed for 140,000 volts.

### The American Bison Society.

In the belief that Americans generally will be found in sympathy with a carefully planned movement to save what might well be termed their national animal, and in order that all who desire may take part in the work of preservation, there was recently organized in New York City the American Bison Society, which, in accordance with its constitution, has for its object "the permanent preservation and increase of the American Bison."

This Society will seek to have established in widely separated localities, under government auspices, several herds of buffalo, on suitable ranges (preferably government land), such ranges to be chosen from a large number that have been recommended by competent persons. These herds, under proper management, should increase until the race is no longer in danger of extinction.

With this end in view, the American Bison Society has now begun an active campaign. A bill calling for national aid in the establishing of several buffalo herds is already under consideration. In the meantime, the Society purposes to make a determined effort to organize the interest of the public in the fate of the American buffalo, and presently bring it to bear in such manner that it will result in the governments of both the United States and Canada taking active measures to insure that animal's preservation and increase.

The officers and managers of the American Bison Society are: *Honorary Presidents*—Theodore Roosevelt, President of the United States; and Earl Grey, Governor-General of Canada. *President*—William T. Hornaday, Director New York Zoological Park. *Vice-Presidents*—A. A. Anderson, President of the Camp Fire Club of America; Prof. Franklin W. Hooper, Director of Brooklyn Inst. of Arts and Sciences. *Secretary*—Ernest Harold Baynes, "Sunset Ridge," Meriden, N. H.

*Board of Managers*—A. A. Anderson, New York; Ernest Harold Baynes, Meriden, N. H.; Herbert L. Bridgman, Brooklyn, N. Y.; Dr. H. C. Bumpus, Director American Museum of Natural History; Dr. Charles B. Davenport, Director Biological Station, Carnegie Institution, Cold Spring Harbor, L. I.; Prof. Morton J. Elrod, University of Montana; Madison Grant, Secretary New York Zoological Society; Prof. Franklin W. Hooper, Director of Brooklyn Institute of Arts and Sciences; William T. Hornaday, Director New York Zoological Park; C. J. Jones, Topeka, Kan.; Prof. David Starr Jordan, Leland Stanford University, California; Frederic H. Kennard, Boston; Frederic A. Lucas, Curator of Museum, Brooklyn Institute of Arts and Sciences; Dr. Charles S. Minot, President of Boston Society of Natural History; Prof. Henry F. Osborn, Ph.D., Columbia University, New York; Dr. T. S. Palmer, Assistant in Charge of Game Preservation, Biological Survey, Washington, D. C.; Commander Robert E. Peary, U. S. N., A. Bowen Perry, Commissioner Royal N. W. Mounted Police, Regina, Canada; John M. Phillips, Pittsburgh, Pa.; Gifford Pinchot, Forester, Washington, D. C.; Edmund Seymour, New York; Harry W. Smith, M. F. H., Grafton Hounds, Worcester, Mass.; C. H. Stonebridge, New York City; John E. Thayer, Boston; William Lyman Underwood, Clark Williams, New York; Prof. Calvin M. Woodward, LL. D.

## Review of Scientific Progress in 1907.

### ARCHAEOLOGY.

From the land of the Pharaohs, where the secret tombs of over half a hundred ancient monarchs—great subterranean vaults—have already been explored, reports were received of the excavating of the oldest temple by 1,000 years. This is an American enterprise, and will doubtless enrich the museums of New York City and other contributing centres, as well as the National Museum at Cairo. Egypt continued to contribute invaluable papyri and inscriptions. The discovery of Menander's comedies has been followed by new surprises. From the frontiers of Egypt and Nubia, close to the tropics, the little island of Elephantine yielded ancient Hebrew documents dating from 400 B. C., and revealing the existence of a temple of Jehovah in that locality. These writings make mention of biblical characters—Yehohanan, high priest of Jerusalem, and Sanballat, Governor of Samaria, and refer to the foreground of history. Together with letters revealing details of daily life, they constitute a veritable treasure-trove.

Fresh discoveries rewarded scientific research in other lands, notably in Central Asia and also in Palestine, where much positive information has been obtained regarding the period preceding the Jewish conquest and more important discoveries (bearing on the later period) are anticipated. Further contributions, however, are needed for the prosecution of the work. In Greece a considerable section of the marketplace of ancient Corinth has been cleared, and the Odeon, or concert-hall, presented to the city by Herodes Atticus, discovered and partially excavated. Important research was also carried on in the outer Kerameikos. Here have been unearthed the bases of the Ambassadors' Monument and the Tomb of Pythagoras. Research was also continued at Olympia and Tiryus.

The excavation of the Roman Forum is now almost complete, after nine years' work. Italy, it was announced, would carry on the excavations of Herculaneum without foreign aid.

### ASTRONOMY.

The possibilities of progress in the observation and study of the stars have been greatly increased by Professor Todd, of Amherst College, who devised a means of operating at astonishing altitudes with the aid of a tank of compressed air. During their operations in South America, the Professor and Mr. E. C. Sipher secured 10,000 pictures of the planet Mars. The double canals were photographed, and an entirely new map will be made. The canals undoubtedly vary with the seasons, indicating vegetable and probably animal and "human" life. Other lines of evidence converge to the same conclusion, particularly the results secured at Flagstaff, Ariz., by Professor Lowell, who photographed the double canals in the Northern Hemisphere and directed the work in South America.

Curious phenomena described as "knots" or gaps were detected in the rings of the planet Saturn, and unusually fine photographs were secured of the transit of Mercury on November 14. Fragments of the rings of Saturn are certainly falling in upon the planet, but, according to Professor Lowell, the process is neither new nor catastrophic. It is especially interesting, as illustrating the celestial mechanism and the working of the law of gravitation. The "markings" on the planet Venus were seen by three observers at Flagstaff, where the Lowell observatory affords splendid facilities for astronomical research.

From a study of stellar motion by Mr. Eddington, of Greenwich, it appeared that Kapteyn's hypothesis was correct as to division into two groups or "drifts," and that one of the drifts moves relatively to the sun about three times as fast as the other. In the number and magnitude of the units composing them these two drifts would appear about equally balanced.

Investigation of the movements of about one hundred and fifty comets by the French astronomer Payet justifies the belief that comets never have their origin outside the solar system.

Experiments by G. S. Burns showed the ratio of total starlight to full moonlight to be a little less than 1:100.

### CHEMISTRY.

The astonishing conversion of copper into lithium (a far lighter substance) by Sir William Ramsay, of England, created a sensation in scientific circles and intensified interest in the mystery of radium. Chemists appear to be divided into opposing schools on the interpretation of such phenomena. The conservative chemist holds to the old idea of an "element"—experiments showing that a substance hitherto considered elementary has been disintegrated prove to him only that it was wrongly classified. The radical scientist, on the other hand, is very apt to interpret such phenomena as indicating the possibility of disrupting all the so-called elements and thereby altering our conceptions of matter. The odors from metals appear to differ fundamentally from the metals themselves. C. Gruhn, of Berlin, found that an odor separated from its metal and confined in a vessel behaved in identically the same manner as the emanations from radioactive bodies, and it is now thought that such phenomena are universal.

Prof. Boltwood, of Yale, announced the isolation of a new element (named ionium), the possible "parent" of radium. By many radium is regarded as a product of uranium. It was announced that a substitute for radium had been found in uranyl molybdate, a substance showing the same radioactivity as radium bromide.

Further progress was made in the manufacture of diamonds and other precious stones, and radium was utilized for that purpose.

Chemical imitation of plant life and growth was made a subject of special study, and curiously lifelike cultures produced with chemical precipitates. The chemical interaction of pigments as affecting the permanency of paintings was investigated by Eugene Lemaire, of Paris.

As an inexpensive motor fuel ethyl alcohol has been tested with very promising results. A new process for the restoration of vulcanized rubber was based on the discovery that it was soluble in terpinol, and a method of manufacturing rubber from wheat mixed with pyta'm was another innovation.

Investigations by Prof. W. E. Dixon point to the conclusion that for want of standard

strength and quality many of the drugs in the Pharmacopoeia frequently fail as remedial agents, even when properly compounded, and that there is a considerable loss of life in consequence. An antidote for opium, *conibretum sundaicum*, was reported from the Malay Peninsula.

It is now known that a chemical poison injected in the sting of the bee is a cure for rheumatism by a process of "neutralization," which was made the subject of further research.

On February 2 the distinguished chemist and geologist Dimitri I. Mendeleef, one of the world's greatest scientists, died at St. Petersburg. To Mendeleef was due the discovery of the famous "periodic law" governing the relation between the properties of chemical elements and their atomic weights. Prof. Mendeleef predicted the existence of three elements then unknown, and outlined their properties. His prediction was subsequently verified by the discovery of the elements now known as gallium, germanium, and scandium.

The famous French chemist, P. E. Berthelot (founder of synthetic chemistry) died suddenly (on hearing of the death of his wife) on March 25, and was buried in the Pantheon at Paris. His death followed that of Henri Moissan (of the same city), another noted name. Instead of patenting appliances of the greatest utility, Moissan gave them freely to the world.

#### GEOLOGY AND PALEONTOLOGY.

Charles D. Walcott, under whose efficient management the United States Geological Survey more than doubled the sphere of its activities, was appointed Secretary of the Smithsonian Institution (the highest scientific honor in the gift of the Government).

The Survey now employs in its Reclamation Service over 500 civil engineers and assistants. Within four years it reclaimed 280,000 acres of desert wilderness, in which thousands of settlers found better homes. The service has already worked wonders in the canyons of the West, and it is proposed to cover an area two-fifths of the size of the whole United States.

Petitions from the Eastern, Middle, and Southern States for an extension of the reclamation system have been sent to Congress. It was shown that swamp lands aggregating about 50,000,000 acres could be drained and rendered available for 12,000,000 people, with an increase in land value of \$5,000,000,000.

Atmospheric conditions as a contributing cause of gas explosions was a question studied in connection with coal mines. The value of peat as a producer of power gas is now recognized, as a result of investigation by the Geological Survey.

Announcement was made of the discovery in Nebraska of portions of nine human skeletons pronounced by the Nebraska State Geologist to be at least 1,000 years old. These remains differed radically from those of later Indian tribes (loess and fragments of shells unearthed evidently dated from the Glacial period). Among other geological discoveries reported was that of a large and picturesque cave under Lookout Mountain, near Chattanooga, Tenn.

#### ENGINEERING.

Owing to the frequent accidents on American railways, the regulation of speed has become a matter of vital importance. Speed indicators were placed some time ago on all the passenger engines of the Chicago, Burlington and Quincy system, and engineers forbidden to "make up for lost time." A new ruling also requires that an engineer be able to see distant signals without the aid of glasses, which are liable to be broken or clouded while a train is running at the rate of 100 feet per second.

Excess of phosphorus in steel seems to have been the principal cause of the harvest of accidents from broken rails, commercialism overruling scientific metallurgy. Another cause of derailment was believed to be the use of old-fashioned types of frog and wheel-flange.

Referring to the automatic stop apparatus on the express tracks of the New York Subway, "Railway and Locomotive Engineering" pointed out a means of absolute protection against further collisions in the country at large.

Use of automatic explosives for trains passing signals was also proposed.

Cars made of steel are coming into general use, and the year opened with a strong demand for this type of rolling stock, both freight and passenger.

It has been claimed that in the event of wrecks, it would be impossible to reach victims encased in a steel car. Such cars, have, however, shown remarkable strength and endurance in collisions.

The first steel Pullman sleeper, completed in 1907, was a marvel of workmanship and artistic beauty.

Streets of steel have been proposed to the City of Paris, and a section of blocks, with ridges to prevent slipping, has already been laid. Nails imbedded in asphalt, with points projecting, surface holes, and extreme smoothness and insecurity in Winter weather have shown the need of newer methods.

An oxyacetylene machine for severing steel and iron, combining safety with extreme speed, found much favor with French engineers.

Several new types of hydroplanes, or gliding boats, combining great motor power with extreme lightness of construction, showed remarkable speed on the Seine, near Paris, and a machine for use on land and water was a novelty in automobile construction.

On August 10, Prince Scipio Borghese won an automobile race from Peking to Paris, after driving his car nearly 8,000 miles in two months.

Referring to the proposed tunnels under Behring Strait, the Strait of Gibraltar, the Strait of Messina, and the Irish Channel, it was noted by a London engineering journal that there were more subaqueous tubes and tunnels under construction in the waters surrounding New York City than at all other points combined. In aerial construction in New York the tower of the Singer Building marks a new departure, being 612 feet high above the curb.

## Geographical Research in 1907.

### AFRICA.

In their native culture, as well as in their exceptional power of assimilating European civilization, the people of Uganda are probably the most advanced of African tribes. They have now a native Parliament and courts, and, from the first, their readiness to receive instruction has been remarkable. On the other hand, the Anglo-Egyptian Soudan may be mentioned as a vast region still sunk in the depths of barbarism. With an area one-third as large as the United States, the land under cultivation is less than the area of Long Island, N. Y., the remainder consisting of desert and primeval forest. The demand for unskilled labor is far in excess of the supply, and the rate of wages has risen considerably. According to Lord Cromer, the most important political issue will probably be the abolition of slavery without serious disorder. In establishing railroad communication, much has already been done, notably in lines connecting the Soudan and the Nile Valley and the Province of Dongola with the sea. The population is now placed at 1,500,000 to 2,000,000 (by the Soudan Almanac for 1907).

The activity of the French in consolidating their influence in the Central Sahara was illustrated by a journey of 3,200 miles (750 over new ground) by Captain Arnaud, across the whole region from Algeria to the coast of Dahomey, at Kotonu.

In East Africa, a detailed examination of the interesting region between Kilimanjaro and the Victoria Nyanza was completed by Dr. Jaeger and Herr Oehler. Marked progress and prosperity was reported from South Rhodesia. Mr. L. A. Wallace, Chief Surveyor to the British South Africa Company in Northeastern Rhodesia, reported that there are already 5,000 miles of astronomically surveyed routes in that region. Its rich cotton soil is probably its best recommendation. There are also extensive forests of excellent timber and rich mines of copper, lead and zinc, with a very large area of good farming land in the highlands.

From estimates by the British Cotton Growers' Association, it appeared that Northern Nigeria may probably produce at some future time 7,000,000 bales of cotton, enough to supply Great Britain, and leave a large quantity for other countries.

Railroads, to establish quick connection between the mineral fields of Katanga and the Atlantic Coast, a distance of 1,000 miles, were reported under construction. The amount of copper in Katanga, within a hundred feet of the surface, ready for exploitation, is enormous, and tin, gold and coal have already been discovered.

### ASIA.

That a new era is opening in China was very evident from the accounts published by Lieutenant-Colonel Wingate of his nine years' survey and exploration in the northern and central sections. In the ancient City of Luchon, and also in Ngan-king, the capital of Ngan-hwei, rapid progress is being made in education along modern lines. Splendid schools and hospitals are in operation, and the thirst for Western knowledge is apparent on every side. The inhabitants of Southern Ngan-hwei are especially eager for all modern and Western improvements. In Northern China and in the interior, many Chinese are eager for the extension of railroads, telegraphs and mail service to their towns.

Archaeological research, combined with geographical exploration, was carried on in Central Asia. From a letter received from the anthropologist, Dr. Stein, at Kirm, it was learned that sections (hitherto unexplored) of the Tashkurgan River Valley had been systematically surveyed, as well as the eastern slopes of the Mustagh-Ata range to the latitude of Yang-Hissar. Further research was reported in the high mountains south of Khotan. At the site of Khadalik, Dr. Stein recovered many manuscripts on paper, in Sanskrit, Chinese, and in the unknown language of old Khotan, besides many wooden tablets inscribed in the same language, and some in Thibetan. Large rolls of a Buddhist text in Chinese were found, having on the reverse what was evidently a translation into the old language of Khotan. These may supply the long-desired clue to the decipherment of that language. The geography and archaeology of Central Asia have been greatly advanced by Dr. Stein's investigations in conjunction with the researches of another noted savant, M. Le Coq.

News was also received that Dr. Sven Hedin had arrived at Ngangou-tso, in the southern part of Thibet, after crossing the country from north to south, and discovering many new rivers, lakes and mountains. On February 22, he wrote from Shigatse: "The country between Ngangtsi-tso and the Brahmaputra is one of the most interesting portions of Thibet. The plateau stretching to the south, hitherto unknown, is one of the highest on the earth." From Stanagbo, the explorer travelled by boat, on a river full of floating ice. There was a constant stream of boats with pilgrims on their way to the New Year festivals at Tashi Lumpo and Sven Hedin met with a very hearty welcome. The Tashi-Lama overwhelmed him with kindness, presents and provisions, and permitted him to sketch and photograph at will. Between Chinese Turkestan and the southern border of Thibet, 840 miles were travelled in unexplored country, all of which was mapped, points being fixed astronomically and panoramas drawn.

When within sight of Dangra-yum-tsa, the explorer was stopped by fifty horsemen and informed that he could go wherever he wished, only not to the holy lake. He praised the work of his predecessors, Major Rider and Captain Rawling, as evidenced in the kindness and hospitality of the people.

Further south, in India, political agitation and unrest was one of the features that marked the year. A convention, delimitating spheres of influence in Asia, notably in Persia, was signed by England and Russia on August 31.

The Japanese were actively engaged in developing the southern half of the Island of Saghalien, acquired by treaty from Russia at the close of the recent war.

### EUROPE.

The Founders' Medal of the Royal Geographical Society of England was awarded

to Dr. Francisco Moreno, for twenty years' research in South America, especially Patagonia and the Southern Andes.

The Ninth International Geographical Congress will be held in Geneva, Switzerland, July 27-August 6, 1908. Ten scientific excursions have been arranged, some of which will occur before the congress meets, and others immediately after adjournment. The headquarters of the committee are at Athenee, Geneva.

Considerable progress was reported on the Mont Blanc railway, the lower portion of which was completed. Up to 8,220 feet, the roadway was to be in the open, commanding magnificent views. From this altitude to 11,900 feet the trains will pass through a gallery bored in the mountain, with frequent openings in the rock. At the summit, a tunnel under the glaciers will protect the line from avalanches. This part of the line will take many years to construct.

#### AMERICA.

Progress in the topographic map of the United States, with work in thirty-one States and Territories, was announced. Two parties were engaged in Alaska, making detailed maps of mining districts.

The Geological Survey arranged to carry on measurements of the quantity of water in important streams at over six hundred gauging stations in forty-two States (in the fiscal year 1907-8). Under the present system, it is probable that within twenty years practically all the land available for irrigation will have been utilized and the demand for new land as strong as ever. Hence, any plan making it possible to avoid the enormous waste of water by evaporation is worthy of careful consideration.

From observations by an expedition from the desert station of the Carnegie Institution, the Salton Lake was found to cover an area of nearly seven hundred square miles. Announcement was made of a magnetic survey of Mexico, under the joint auspices of the Carnegie Institution and the Mexican Government.

Prof. Chas. W. Brown, who visited Jamaica to study the effects of seismic disturbances, found that the earthquake which destroyed the City of Kingston was confined in its area of greatest destruction to small limits on alluvial ground. About 85 per cent. of the buildings in the closely built city were destroyed. Eighty shocks were noticed between January 14 and February 5, and others have occurred since.

Increasing interest has been shown in the Republics of South America. A study of the climate of the Amazon basin region by Paul Le Coite (based on fourteen years' experience) showed that the temperatures of this region, comparatively little known, though high, were very uniform and not excessive. The seasonal divisions are determined by rainfall. Floods occur with regularity, covering immense areas and forcing the inhabitants to live in boats or seek the upper stories of their dwellings. Malaria (which seems to occur in the absence of mosquitoes) and other tropical diseases are, unfortunately, a serious barrier to exploration and settlement.

The Geographical and Geological Commission of Sao Paulo, Brazil, issued a very full report, describing in detail the explorations and survey of the larger rivers of the State.

An extension of the railway at Guayaquil (on the western slope of the Andes) to Quito, Ecuador, was reported, and also the beginning of a line down the Atlantic slope of the Peruvian Andes, to connect the Amazon with the Pacific. The road over the Andes, which Chile and Argentina are building, the last link in the line across the continent, was nearing completion.

#### POLAR RESEARCH.

News was received from Buenos Ayres that the Argentine research ship, Uruguay, had returned from a perilous voyage to Scotia Bay, South Orkney Islands, whither she had gone to relieve the members of a meteorological party who had spent more than a year on that desert island, continuing the work initiated by the Scottish Antarctic expedition of 1903. Another party then embarked for Wendel Island (west side of Graham Land). Observations were continued at South Georgia, and plans were made for establishing stations in the South Sandwich group and on the west side of the Falklands. All this work is under the control of the Argentine Republic, whose meteorological service is in the highest state of efficiency.

King Edward VII. Land was selected as the base of operations by Lieutenant Shackleton for a British expedition to the Antarctic. An attempt will be made to reach the South Pole by a party of three, with six Siberian ponies and a motor car. A Belgian expedition for the South Pole was announced under the leadership of Dr. H. Arctowski.

Of special interest was the Arctic journey of Captain Mikkelson and Mr. Leffingwell on sledges to lat. 71 deg. 17 min. N., long. 147 deg. 44 min. W., which was accomplished under the most adverse conditions. Pickaxes were in constant use (until lost), and a raft was improvised with sledges when necessary. Five hundred and thirty-three nautical miles, lagoon ice and drift included, were made on the trip, 361 over pack ice. Valuable information regarding ice conditions in Beaufort Sea was one of the scientific results. On September 14 a despatch, correcting the report that the party had perished, was sent from Yukon Crossing to THE WORLD by the anthropologist, Mr. Stefanson.

The equipment of a Russian expedition to explore the Arctic regions was reported (the expedition to last several years), under the leadership of Lieutenant-Colonel Sergeyeff, and the eighth trip to the Polar regions by Dr. Bruce was also announced.

The west coast of Nova Zembla was explored by the Duke of Orleans, in the Belgica, and much scientific data secured.

The proposed expedition of Commander Peary was postponed, owing to the delay of over two months in the construction and installation of the boilers for the Roosevelt.

Considerable progress was made by Walter Wellman, in preparation for his final flight by airship to the North Pole. The expedition set sail for Dames Island, Spitzbergen, on June 3, on the Arctic steamer Frithjof. On arriving at the station selected, furious gales were encountered, and conditions proved unfavorable for the voyage, and it was accordingly postponed.

## American Learned Societies.

**Actuarial Society of America.**—President, Daniel H. Wells, Hartford, Ct.; First Vice-President, John K. Gore, Newark, N. J.; Second Vice-President, Archibald A. Welch, Hartford, Ct.; Secretary, Arthur Hunter, 346 Broadway, New York City; Treasurer, David G. Alson, Philadelphia, Pa.; Editor of the Transactions, Clayton C. Hall, Baltimore, Md. The Actuarial Society of America was organized in 1889 for the purpose of promoting actuarial science. Applicants whose nominations are approved by the Council are admitted to membership on passing the requisite examinations. There are two classes of members; fellows, now numbering 123, and associates, 78. Besides including the actuaries of life insurance companies and consulting actuaries of the United States and Canada, the membership embraces leading actuaries in Europe and Australasia.

**American Academy of Medicine.**—President, Dr. Thos. D. Davis, Pittsburgh, Pa. Secretary and Treasurer, Dr. Charles McIntire, Easton, Pa.; Editor of the "Bulletin," Charles McIntire, Easton, Pa. Object—To associate physicians who are also alumni of academic (or scientific) colleges; to encourage intending physicians to pursue a regular course of study leading to a bachelor degree before entering upon the study of medicine; to investigate and discuss the various problems of "medical sociology." Entrance fee, \$5; dues, \$3 per annum. Present membership, 925. Organized 1876. Next annual meeting at Chicago, Ill., May 30, and June 1, 1908.

**American Academy of Political and Social Science.**—President, L. S. Rowe, Ph. D., University of Pennsylvania; Secretary, Carl Kelsey, Ph. D., University of Pennsylvania; Editor of the Annals, Emory R. Johnson, Ph. D., University of Pennsylvania; Clerk, N. J. Smith-Fisher, West Philadelphia Station, Philadelphia. Founded in 1889 to promote the political and social sciences. Membership, 4,000, distributed among every State and 30 foreign countries. Annual fee, \$5; fee for life members, \$100. Annual meeting held in April.

**American Antiquarian Society.**—President, Waldo Lincoln, Worcester, Mass.; Corresponding Secretaries—Foreign, Franklin B. Dexter, New Haven, Ct.; Domestic, Charles Francis Adams, Lincoln, Mass.; Recording Secretary, Andrew M. P. Davis, Cambridge, Mass. Annual meeting is held at Worcester, Mass., in October. Organized 1812. Domestic membership restricted to 140. Admission fee of United States members, \$5; annual dues of New England members, \$5.

**American Anti-Tuberculosis League.**—President, Dr. Florence O. Donohue, Syracuse, N. Y.; Secretary, Dr. W. H. Mayfield, St. Louis, Mo. Membership, 5,000.

**American Asiatic Association.**—President, James R. Morse; Vice-President, Lowell Lincoln; Secretary, John Foord, P. O. Box 1500, New York. The purposes of the society are to foster and safeguard the trade and commercial interests of the citizens of the United States and others associated therewith in the Empires of China, Japan, and Korea, the Philippines, and elsewhere in Asia and Oceania. Membership, 300. Organized 1898. Annual dues, \$10. Auxiliary societies at Shanghai and Yokohama.

**American Association for the Advancement of Science.**—President, William H. Welch, Johns Hopkins University, Baltimore, Md.; Permanent Secretary, L. O. Howard, Cosmos Club, Washington, D. C.; General Secretary, John F. Hayford, Washington, D. C.; Secretary of the Council, F. C. McNair, Houghton, Mich.; Treasurer, R. S. Woodward, Washington, D. C. The Association was chartered in 1874, being a continuation of the American Association of Geologists and Naturalists, organized in 1840. The membership is 4,000. Admission fee, \$5; annual dues, \$3.

**American Association of Obstetricians and Gynecologists.**—President, Robert Tuttle Morris, M. D., 616 Madison Ave., N. Y. City; Secretary, Wm. Warren Potter, M. D., 284 Franklin St., Buffalo, N. Y.

**American Bar Association.**—President, J. M. Dickinson, Chicago, Ill.; Secretary, John Hinkley, 215 North Charles Street, Baltimore, Md.; Treasurer, Frederick E. Wadham, Albany, N. Y. Each State and Territory is represented by one vice-president and one member of the General Council. Membership, about 3,100. This Association of lawyers of the United States was organized in 1878. The next annual meeting will be held in August, 1908.

**American Chemical Society.**—President, Marston T. Bogert, Columbia University, N. Y.; Secretary, Charles L. Parsons, Durham, N. H. The Society was organized in 1876 for "the advancement of chemistry and the promotion of chemical research." Publishes the Journal of the American Chemical Society, monthly, and Chemical Abstracts, semi-monthly; Editor, Wm. A. Noyes, Urbana, Ill. Annual dues, \$8. Total membership, 3,000.

**American Climatological Association.**—President, Thomas D. Coleman, M. D., Augusta, Ga.; Secretary, Guy Hinsdale, M. D., Hot Springs, Va. Organized 1884. Next annual meeting, June 10, 1908, Boston, Mass.

**American Dermatological Association.**—President, Arthur Van Harlingen, M. D., Philadelphia, Pa.; Secretary, Grover W. Wende, M. D., 471 Delaware Avenue, Buffalo, N. Y.

**American Dialect Society.**—President, O. F. Emerson, Western Reserve University, Cleveland, Ohio; Secretary, W. E. Mead, Wesleyan University, Middletown, Ct.; Treasurer, Prof. R. H. Pife, Wesleyan University, Middletown, Ct. Organized in 1889 for "the investigation of the spoken English of the United States and Canada, and incidentally of other non-aboriginal dialects in the same countries." Publishes "Dialect Notes" at irregular intervals. Annual fee, \$1. Membership, about 300. Any person may become a member.

**American Economic Association.**—President, J. W. Jenks, Ph. D., Cornell University; Secretary, W. M. Daniels, Princeton University, Princeton, N. J. Organized 1885. Has 1,000 members; annual dues, \$3; life membership, \$50; no other entrance fee. The objects of the Association are the encouragement of economic studies and the publication of papers thereon.

**American Electro-Therapeutic Association.**—President, Dr. Herbert F. Pitcher, Haverhill, Mass.; First Vice-President, Dr. E. C. Titus, N. Y.; Second Vice-President, Dr. Jefferson D. Gibson, Denver, Col.; Secretary, Dr. Albert C. Geyrer, 1239 Madison Avenue, New York, N. Y. Organized 1890. Membership, 280.

**American Entomological Society.**—President, Philip P. Calvert; Secretary, Henry Skinner, M. D., Philadelphia, Pa. Organized 1859. Object—The study of entomology. Membership, 140.

**American Fisheries Society.**—President, E. A. Birge, Madison, Wis.; Vice-President, H. M. Smith, Washington, D. C.; Recording Secretary, George F. Peabody, Appleton, Wis.; Treasurer, C. W. Willard, Westerly, R. I.; Corresponding Secretary, Charles G. Atkins, East Orland, Me. Organized December, 1870. Annual dues, \$2. Membership, about 600.

**American Folklore Society.**—President, R. B. Dixon, Harvard University, Cambridge, Mass.; Permanent Secretary, \_\_\_\_\_ Cambridge, Mass. Organized in 1888 for "study of folklore in general, and in particular the collection and publication of folklore of North America." Membership fee, including a copy of "The Journal of American Folklore" (quarterly), \$3 per annum.

## AMERICAN LEARNED SOCIETIES—Continued.

**American Forestry Association.**—President, James Wilson, Secretary of Agriculture, Washington, D. C.; Secretary, Thomas E. Will, Office, 1311 G Street, N. W. Washington, D. C. Organized 1882. Membership, 6,400.

**American Geographical Society.**—President, Archer M. Huntington; Vice-President, D. O. Mills; Corresponding Secretaries—Foreign, William Libbey; Domestic, Chasler Robbins; Recording Secretary, Anton A. Raven. Offices of the Society, 15 West Eighty-first Street, New York City. The objects of the Society are to encourage geographical exploration and discovery; to investigate and disseminate new geographical information; to establish in the chief maritime city of the country, for the benefit of commerce and navigation, \* \* \* a place where the means will be afforded of obtaining accurate information for public use of every part of the globe. Organized in 1852; membership, 1,400. Annual dues, \$10; no entrance fee.

**American Gynecological Society.**—President, J. Montgomery Baldy, M. D., Philadelphia; Secretary, J. Kiddle Goffe, M. D., 616 Madison Avenue, New York. Organized 1876. Membership 100.

**American Historical Association.**—President, J. Franklin Jameson, Washington, D. C.; Secretary, A. Howard Clark, Smithsonian Institution, Washington, D. C.; Treasurer, Clarence W. Bowen, Ph. D. Association founded 1884, incorporated by Congress 1889. Object—The promotion of historical studies. Entrance fee, \$3; annual dues, \$3. Membership, 2,300.

**American Institute of Architects.**—Offices and library, The Octagon, Washington, D. C. President, Frank Miles Day, Philadelphia, Pa.; Secretary and Treasurer, Glenn Brown, Washington, D. C. The Institute has 29 chapters, 329 fellows, 466 associates, 82 corresponding and 63 honorary members. Initiation fee is \$5; yearly dues, fellows, \$15; associates, \$7.50. Organized 1857.

**American Institute of Electrical Engineers.**—President, Henry Gordon Stott; Secretary, Ralph W. Pope, at the executive offices, library, and reading-room, 83 West 39th St., New York. Entrance fee, \$5; annual dues, associates, \$10; members, \$15. Monthly meetings, New York. Organized 1884. Prints its transactions monthly. Membership, 5,100.

**American Institute of Homeopathy.**—President, William E. Green, Little Rock; Secretary, Charles Gatchell, M. D., 100 State Street, Chicago, Ill. Organized in 1844, and is the oldest national medical organization in the United States. Has 2,100 members, representing every State in the Union, besides Canada.

**American Institute of Mining Engineers.**—President, John Hays, Hammond, N. Y.; Secretary, R. W. Raymond, 29 West 39th St., New York; Treasurer, Frank Lyman, New York. Membership, October 10, 1907, 4,206. Organized 1871. Incorporated 1905. Annual dues, \$10.

**American Laryngological Association.**—President, Herbert S. Birkett, M. D., Montreal; Secretary, James L. Newcomb, M. D., 118 West Sixty-ninth Street, New York City. Organized 1878. Membership, 100.

**American Laryngological, Rhinological and Otolological Society.**—President, Wendell C. Phillips, M. D., 40 West Forty-seventh St., N. Y. City; Secretary, Thomas J. Harris, M. D., 117 East Fortieth St., New York City.

**American Mathematical Society.**—President, Henry S. White; Secretary, F. N. Cole, Columbia University, New York; Treasurer, J. H. Tanner; Librarian, D. E. Smith. Meetings held at Columbia University, New York. Society was reorganized as the American Mathematical Society, July, 1894. Object—To encourage and maintain an active interest in and to promote the advancement of mathematical science. Admission fee, \$5; annual dues, \$5; life membership, \$50. Membership, 550. The Society publishes two journals, the "Bulletin" and the "Transactions."

**American Medical Association.**—President, Dr. Joseph D. Bryant, N. Y. City; Secretary-Editor, Dr. George H. Simmons, 108 Dearborn Avenue, Chicago, Ill. Incorporated 1897. Next annual session at Chicago, Ill., June 2-5, 1908. Annual fee, \$5. Membership, over 29,000.

**American Medico-Psychological Association.**—President, Dr. Charles P. Baneroff, N. H.; Secretary, Dr. Charles W. Peigrun, Poughkeepsie, N. Y. Next annual meeting at Cincinnati, Ohio, June, 1908.

**American Microscopical Society.**—President, Prof. Herbert Osborn, Columbus, Ohio; Secretary, Dr. Fred C. Zapffe, Chicago, Ill.; Treasurer, David L. Zook, Chicago, Ill.; Custodian, Magnus Pfau, Pittsburgh, Pa. Organized 1878. Incorporated at Washington, D. C., 1891. Object—The encouragement of microscopical research. Initiation fee, \$3; annual dues, \$2. Membership, 300. Research funds, \$2,530.

**American Neurological Association.**—President, Hugh T. Patrick, M. D., Chicago, Ill.; Secretary, G. M. Hammond, M. D., 60 West Fifty-fifth Street, New York City.

**American Numismatic Association.**—President, Farran Zerbe, Tyrone, Pa.; Vice-Presidents, Henrie E. Buek, Delaware, Ohio; P. O. Tremblav, Montreal, Can.; Corresponding Secretary, Howland Wood, Brookline, Mass.; Treasurer, Dr. George F. Heath, Monroe, Mich.; Librarian, Ben G. Green, Chicago, Ill. The society was founded in 1891 for the promotion of Numismatics. Membership, 525.

**American Numismatic Society.** Audubon Park, 156th Street, West of Broadway, New York. —President, Archer M. Huntington; Recording Secretary, Bauman L. Belden; Corresponding Secretary, Henry Russell Browne. Society founded in 1858 for the promotion of numismatics, etc., in the United States; possesses coin and medal collection and library. Total membership, 350.

**American Ophthalmological Society.**—President, S. D. Risley, M. D., Philadelphia, Pa.; Secretary, S. B. St. John, M. D., 68 Pratt Street, Hartford, Ct. Membership, 175.

**American Oriental Society.**—President, Prof. C. E. Lanman, Harvard University; Corresponding Secretary, D. Washburn Hopkins, Yale University, 239 Lawrence Street, New Haven, Ct.; Recording Secretary, George F. Moore. Organized September 7, 1842, for the cultivation of learning in the Asiatic, African, and Polynesian languages, and the publication of works relating to these languages. Publishes an annual Journal. Annual fee, \$5; fee for membership in section for Historical Study of Religions, \$2; no admission fee. Membership, 325.

**American Ornithologists' Union.**—President, Charles F. Bateholder; Secretary, John H. Sage, Portland, Ct. Organized 1883. Object—The advancement of its members in ornithological science, the publication of a journal of ornithology and other works relating to that science, etc. Annual dues, fellows, \$5; members, \$4; associates, \$3. Membership, 874.

## The Carnegie Institution of Washington.

The Carnegie Institution of Washington was founded by Mr. Andrew Carnegie, January 28, 1902, when he gave to a board of trustees \$10,000,000, in registered bonds, yielding 5 per cent. annual interest. In general terms, he stated that his purpose was to "found in the City of Washington an institution which, with the co-operation of institutions now or hereafter established, there or elsewhere, shall in the broadest and most liberal manner encourage investigation, research and discovery, show the application of knowledge to the improvement of mankind, and provide such buildings, laboratories, books, and apparatus as may be needed."

By an act of Congress, approved April 23, 1904, the institution was placed under the control of a board of twenty-four Trustees, all of whom had been members of the original board referred to above.

The Trustees meet annually, and during the intervals between such meetings the affairs of the Institution are conducted by an Executive Committee, chosen by and from the Board of Trustees, acting through the President of the Institution as chief executive officer.

The offices of the Institution are in the Bond Building, Fourteenth Street and New York Avenue, Washington, D. C.

*Trustees of the Institution*—Chairman, John S. Billings; Vice-Chairman, Elihu Root; Secretary, Cleveland H. Dodge; John D. Cadwalader, William N. Frew, Lyman J. Gage, Daniel C. Gilman, Henry L. Higginson, E. A. Hitchcock, Charles L. Hutchison, William Lindsay, Seth Low, D. O. Mills, S. Weir Mitchell, William W. Morrow, Henry S. Pritchett, William H. Taft, Charles D. Walcott, William H. Welch, Andrew D. White, Robert S. Woodward, Carroll D. Wright.

*President of the Institution*—Robert S. Woodward.

*Executive Committee*—Chairman, Carroll D. Wright; John S. Billings, Cleveland H. Dodge, Daniel C. Gilman, S. Weir Mitchell, Elihu Root, Charles D. Walcott, Robert S. Woodward.

## Literature in 1907.

## NOTABLE BOOKS OF THE YEAR.

Social, political and financial unrest was the prevailing note of the year, as shown by riots in Russia; by the growing ascendancy of the labor element in the English Parliament, as well as by the outspoken protest against the veto power of the House of Lords; by anti-Oriental outbreaks in America, and in the United States by the systematic and determined efforts of the Government, following the lead of President Roosevelt, to curb the power of combinations of capital. Political house-cleaning also took place in some of our cities. The Hague Peace Conference, so large in promise, proved only a school for the amenities of war. From its historical significance the Jamestown Exposition was of more than local interest. American literary history recorded the celebrations of Longfellow and Whittier centenaries. The year's output of books, many of them reflecting these various interests, numbered about 7,000 new works and new editions.

## FICTION.

From a publisher's viewpoint the successes of the year included "The Port of Missing Men," by Meredith Nicholson (a tale of mystery and intrigue centring in a plot against the Austrian throne); "The Brass Bowl," by Louis Joseph Vance, and "The Mayor's Wife," by Anna Katharine Green (detective stories); "The Princess Virginia," by the Williamses (a sprightly royal love story); "Beatrice of Clare," by John Reed Scott (a romance of chivalry, wherein England's Richard III. is portrayed in a new light); "Alice-for-Short," by William De Morgan (a slow-moving record, reminiscent in style of Thackeray, of a delightful English family made up of strongly contrasted characters); "The Shuttle," by Mrs. Burnett (study of international marriages); "The Weavers," by Sir Gilbert Parker (depicting an English Quaker set in authority in Cairo and offering contrasted pictures of English and Oriental types); "The Far Horizon," by Lucas Malet (a well-wrought portrayal of the interaction of two natures, one that of a retired English bank clerk, the other of a woman of tarnished past but compelling charm); "The Helpmate," by May Sinclair (analytical study of the revolt of a woman, narrow-minded, intolerantly religious, against a repented sin of her husband's youth); "New Chronicles of Rebecca," by Kate Douglas Wiggin (further episodes in the girlhood of "Rebecca of Sunnybrook Farm"); and "The Malefactor," by E. F. Oppenheim (sinister tale of revenge for unmerited disgrace). Three books of 1906 should also be mentioned among the "big sellers" of 1907, viz., "The Lady of the Decoration," by Frances Little, "The Doctor," by Ralph Connor, and "Half a Rogue," by Harold MacGrath. Undoubtedly the most notable novel of the year from a literary standpoint was Mrs. Wharton's "The Fruit of the Tree," a clear-cut analysis, perfect in execution, of the characters and motives of one man and two women, each selfish and self-absorbed even in their love, interest centring in the ethical question whether hopeless physical agony may not justify a merciful overdose of opium. Special commendation should also be given Galsworthy's satire on modern English society, "The Country House;" Hewlett's "The Stopping Lady," the romance of a high-spirited English girl set in the midst of early, nineteenth-century English politics; "Fraulein Schmidt and Mr. Anstruther," by the author of "Elizabeth and Her German Garden" (a series of delightful letters by a German girl revealing her disillusionment in a love affair and cheerful readjustment to a narrow life); Elizabeth Robins' "The Convert," based on the recent woman's suffrage agitation in England. Notice should also be made of translations of Fogazzaro's "The Sinner," completing his "Trilogy of Rome," and "The Woman," a study of an educated, undisciplined Italian woman. Recent works of well-known novelists included Howells' "Through the Eye of the Needle" (a study of Altruria); "The Whirlwind," another Dartmoor tragedy by Philpotts, Quiller-Couch's "Major Vigoureux," the Castles' "My Merry Rockhurst," Anthony Hope's "Helena's Path," Crawford's "Aethusa," and Haggard's "Margaret."

National and local questions bulked large in the year's fiction. Wealth in the making and in its effects is the background of David Graham Phillips' "The Second Generation," Basil King's "The Giant's Strength," and Corbin's "The Cave Man," while Mrs. Steel's "A Sovereign Remedy" is an English presentation of the power of money. "Sampson Rock of Wall Street," by Lefevre, and "Friday the Thirteenth," by Thomas Lawson, protest against stock market methods; and David Graham Phillips' "Light-Fingered Gentry" depicts the inner workings of insurance companies. Love, finance, and politics are mingled in Albert Payson Terhune's "Caleb Conover, Railroadier." Various aspects of the labor problem in our large cities were treated in "The Cage," by Charlotte Feller; "The Spirit of Labor," by Hutchins Hapgood; "A King in Rags," by Cleveland Moffet; "Under the Harrow," by Ellis Meredith, and "The Crucible" (temptations of working girls), by Mark Lee Luther, the last three laid in New York. Railroad financiering and building enter into Francis Lynde's "Empire Builders," and Sarah P. Carr's "The Iron Way;" the wonders of electricity are depicted in Stringer's "Phantom Wires;" and Standard Oil methods described in Canfield's "The Spotter." Among a score of novels descriptive of the West of to-day and yesterday may be mentioned Gertrude Atherton's "Ancestors" (San Francisco politics); Lyle's "The Lone Star" (Texas in pioneer days); Hough's "The Way of a Man;" Whitaker's "The Settler" (Manitoba); Parrish's "Beth Norvell" (story of a great singer); Andy Adams' "Reed Anthony, Cowman;" two novels by Harold Bind-loss, and collections of short stories by Janvier, O. Henry, and Stewart Edward White. "Patty of the Palms," by Adam C. Haeselbarth, deals with "benevolent assimilation" in Porto Rico. The negro question, as well as other Southern problems, are presented in "The Traitor," by Thomas Dixon; "The World's Warrant," by Norah Davis; "Mam 'Linda," by Will Harben, and "The Sowing of Alderson Cree," by Margaret P. Montague (West Virginia feud). "Aunt Jane of Kentucky," by Eliza Calvert Hall, contains tales of rural Kentucky blending humor and pathos and has been strongly commended by the President. Mrs. Martin's "His Courtship" presents character sketches of the Pennsylvania "Dutch."

Topics of wider interest found expression in Maartens' "New Religion" (satirizing modern healing fads), and Elizabeth Stuart Phelps' "Walled In" (study of an invalid man). Chambers' "A Tree of Heaven," Woods' "The Invader" (a woman of Dr. Jekyll and Mr. Hyde natures) and Howells' "Between the Dark and Daylight" are based on psychological investigations; while religious doubts, prejudices and eccentricities figure in Graham Travers' "Growth," Steiner's "The Mediator," and Katherine C. Thurston's "The Mystics." "A Winged Victory," by Robert M. Lovett (co-education), and "Ackroyd of

the Faculty," by Anna C. Ray, are pictures of American university life. Chambers' "The Younger Set," displays phases of New York smart society, as Dolf Wyllarde's "As Ye Have Sown," and Oppenheim's "A Lost Leader" picture the society of England. Russian conspiracy and persecution furnish the incidents for Marchmont's "In the Cause of Freedom," Oxenham's "The Long Road," Gorky's "Mother," and Gordon's "The Ferry of Fate," while Conrad's "The Secret Agent" discloses anarchistic plots in London. Not to be omitted, though more difficult to classify, are Mason's "Running Water" (an Alpine romance); Laughlin's "Felicity" (describing the making of an actress); Hichens' "Barbary, Sheep," (exotic tale of the desert); George Madden Martin's "Letitia" and Wilkinsons' "The Silent Door" (two portrayals of child nature), and Mrs. De La Pasture's "The Lonely Lady of Grosvenor Square" (English love story). Among many tales of adventure may be singled out Ian Maclaren's historical tale, "Graham of Claverhouse," the last we shall have from his convincing pen.

#### BIOGRAPHY AND HISTORY.

Foremost among biographical works of the year was the long-awaited collection of Queen Victoria's letters, edited by A. C. Benson and Viscount Esher, significant for their revelation of the personality of the writer rather than for any political or historical information they convey. More important as literature, however, were Bielschowsky's second volume on Goethe, Prof. Raleigh's restrained review of Shakespeare's life and work, Gosse's "Henrik Ibsen," and Frederic Harrison's "The Creed of a Layman," being in effect the history of the Positivist religion. Special merit was also discerned in Wright's critical study of Walter Pater from a new viewpoint; Tilley's "Rabelais," Boulting's "Tasso," Dodge's "The Real Sir Richard Burton," Chesterton's "George Bernard Shaw," and Ragg's "Dante," while American literature was represented in Woodberry's "Emerson," Bliss Perry's "Whittier," Traubel's "With Walt Whitman in Camden" (vols. 1 and 2), and Norton's "Longfellow." American biography reflecting the conflicts and triumphs of the past half century was especially noteworthy. Carl Schurz's "Reminiscences," "The Life and Letters of Edwin Lawrence Godkin," edited by Rollo Ogden, and General Wilson's "Life of Charles A. Dana" exhibit three men who left their impress on national affairs; and Civil War history, military and political, is found in Oberholtzer's "Jay Cooke, Financier of the Civil War," General Alexander's "Military Memoirs of a Confederate," General Eaton's "Grant, Lincoln, and the Freedmen," General Howard's "Autobiography," Booker Washington's "Frederick Douglass," and in the seven works on Lincoln, notably those by David H. Bates and Ida Tarbell. Wister's "Seven Ages of Washington," Morgan's "The True Patrick Henry," Bacon's "Henry Hudson," Lewis' "Andrew Jackson," "John Harvard and His Times," by H. C. Shelley, and many books on Roosevelt, including those by Morgan, Douglas, and Burroughs, are creditable studies of dissimilar characters. Delightful glimpses of French life and society were afforded in the "Memoirs of the Comtesse de Boigne" (Napoleonic days), and in Helen Clergue's "The Salon" (eighteenth century); while Dumas', "Memoirs" (vol. 1), Victor Hugo's "Intellectual Autobiography," McCabe's "Talleyrand," Segur's "Julie de Lespinasse," Griddle's "Madame de Staël," as well as the several books on Napoleon, including those by Browning, Lenz, Nicolay, Wheeler and Dodge and others on the Empress Eugenie presented aspects of the men and women who variously influenced the literature and history of France. The world of art of the last half century was mirrored in the memoirs of the two actresses Bernhardt and Ristori, in the life of Antonette Sterling, written by her son, in the "Reminiscences" of Walter Crane, the artist, and in Miss Cary's biographies of Whistler and William Blake, as well as in Symons' "Blake."

Works of history included the new volume on "The Restoration" in the "Cambridge Modern History" planned by Lord Acton, the first two volumes in Reich's "General History of Western Mankind," Paterson's "The Nemesis of Nations," and "The Order of the Cincinnati in France," by Asa Bird Gardiner, Secretary-General of the Cincinnati (a sumptuous volume, shedding light on an interesting phase in the history of this illustrious American society); also two volumes added to Hunt and Poole's "Political History of England," and Pollard's "Factors in Modern [English] History." England and her colonial policy, especially in relation to America in the eighteenth century, were treated by Miss Marks and George L. Beer, and colonial America and Elizabethan England by Sidney Lee in "The Call of the West." Among the eighty odd works on United States history may be mentioned several new volumes in Hart's "American Nation" and Avery's "History," Trevelyan's "American Revolution" (part 3), J. H. Smith's "Our Struggle for the Fourteenth Colony," and added volumes to Doyle's and Osgood's works on the American colonies. General Schaff's "The Spirit of Old West Point," Captain Mahan's "From Sail to Steam," and Spears' "American Navy" summed up our military and naval history; while "The White House," by Esther Singleton, is a social history of the home of our Presidents. Of local interest to New Yorkers was Dr. Peters' "Annals of St. Michael's," and "The City College" history, edited by Mosenthal and Horne. Other special peoples and lands were treated in Lea's "Inquisition in Spain," Curtin's "The Mongols," Hantaux' "Contemporary France" (vol. 3), Clarke's "Modern Spain," Besant's "Mediaeval London" (vol. 2), and Colquhoun's "The Whirlpool of Europe" (Austria-Hungary). There were about forty books on Japan and the Far East, including those by Griffis, Miyakawa, Weale, Cotes, Sakurai and the anonymous record "As the Hague Ordains," ten on Russia, two on Mexico, by Winter and Martin; several on Latin-American republics, including Crichfield's, and a dozen on Jamestown and the Exposition.

#### POLITICAL AND SOCIAL.

Politics and the related questions of finance and social conditions found diverse expression in the season's books. The principles and machinery of American Government were treated in Holt's "Civic Relations," Reinsch's "American Legislatures," Ten Eyck's "Government by the People," J. Allen Smith's "The Spirit of the American Government," and by the Japanese Miyakawa; while Secretary Root lectured on "The Citizen's Part in Government." Dr. Butler discussed the theory of Democracy, Shaw examined the political problems peculiar to American development, and Coolidge studied the international position of "The United States as a World Power." England's system of government was explained by A. L. Lowell, contrasted with which was Lloyd's "A Sovereign People" (working of the Swiss Democracy). Colonial administration was reviewed in Alleyne Ireland's "Report" (vols. 1 and 2, devoted to Burma), and Munro's "The Seigneurial System in Canada," as well as in many descriptive books on the Far East. The vital problems of city govern-

ment found general treatment by Fairlie, with specialized works by W. B. Munro on "European Cities," by Howe on "The British City," and by Gomme on London; while many-sided opinions, both English and American, on the burning question of government and municipal ownership of public utilities were presented by Paterson, Lubbock, Porter, P'ond, Darwin, Meyer, and in the papers of the American Academy of Political and Social Science. Pertinent to The Hague Conference were Jones and Bellot's "Commerce in War" and Captain Mahan's "Some Neglected Aspects of War."

Economics in general were considered by John B. Clark, Boice, and Davenport, and in Hutchinson's "The Limit of Wealth," an ingenious working out of a supposititious system for the distribution of wealth; and there were careful studies of various questions of finance—credit, exchange, interest—by Kemmerer, Lawson, ex-Secretary Shaw, Sprague, and Fisher, with others on taxation by West and Swan, and a volume of addresses edited by Hull on banking and currency. The pros and cons of tariff systems were presented by Welsford and Figou, and the relation between the American tariff and the trusts by Pierce, while "The Trust Movement in British Industry" was traced by Macrosty, and the history of the greatest American industry, the United States Steel Corporation, recounted by Casson. Chancellor Day's "The Raid on Prosperity" advocated trusts and condemned recent Federal procedure against them. Railroad rate regulation in all its complexity was the subject of much argument, notably by Calvert, Haines, Merritt, Parsons, Albertson, Prentice and Serrell. Technical reports on our railways were contributed by McPherson, and in the official German report by Hoff and Schwabach. Olive Day wrote a comprehensive "History of Commerce," Hendricks disclosed the secrets of life insurance, and Dunning debated the question of ship subsidies.

The literature of sociology each year gives evidence of a deepening interest in problems of social betterment. Among many excellent treatises on its methods and results may be mentioned Small's "Adam Smith and Modern Sociology," Forrest's "The Development of Western Civilization" (study of social evolution); Flinders-Petrie's "Janus in Modern Life" (survey of modern political-social conditions), Chesterton-Hill's "Heredity and Selection in Sociology," Baker's "American Problems," Patten's "The New Basis of Civilization," Hadley's "Standards of Public Morality," Trine's "In the Fire of the Heart," and Bailey's statistical study; while Bussell, Shailler Mathews, and Rauschenbusch emphasized the relation of Christianity to social progress. Substitutes for the evils of war were suggested by Jane Addams in "Newer Ideals of Peace," social betterment schemes in Great Britain described by W. L. George, and the business of charity explained by Allen in "Efficient Democracy." Donaldson and Thomas devoted attention to the position of woman and the influence of sex in human society. The relations between labor and capital were the subject of Samuel G. Smith's "The Industrial Conflict," and the problem of child labor that of Mrs. Van Vorst's "The Cry of the Children," with enlightening studies of the English working classes contributed by Olive C. Malvery, Mrs. Hugh Bell, M. Loane, and of the poor in England and America in Jack London's "The Roads." L. B. More's "Wage Earners' Budgets" is a study of the cost of living in New York City. Alien peoples were studied in Commons' "Races and Immigrants in America," Baskerville's "The Polish Jew," Fynn's "The American Indian," and in works on the negro by Dowd, Finot, Washington, and DuBois, whereas "The Race Question in Canada" was treated by Siegfried and "The Asiatic Danger in the Colonies" by Neame. Socialism was the subject of more than twenty-five books, notably Mallock's, Le Rossignol's, and Kropotkin's, and also Podmore's "Life of Robert Owen" and Russell's "The Uprising of the Many" (history of co-operation). Sinclair's "The Industrial Republic" is a forecast of American communism.

#### LITERATURE.

Foremost among books in this field was the initial volume of the fourteen-volume "Cambridge History of English Literature," edited by Ward and Waller, the volume covering the period "From the Beginnings to the Cycles of Romance." Other studies of English literature included Jusserand's "Literary History" (vol. 2), Nicol and Secombe's "History of English Literature," Chandler's "Literature of Roguery," Gummere's "The Popular Ballad," and Omond's "English Metrists." Lollie wrote a history of comparative literature; Newmarch directed attention to "Poetry and Progress in Russia;" Prof. Woodbury interpreted certain "Great Writers," and enlarged on "The Appreciation of Literature," and Stopford A. Brooke contributed "Studies in Poetry." Ibsen was interpreted by Jennette Lee and Bjorkman; George Meredith, by Trevelyan and Bailey; "Paradise Lost," by Marianna Woodhull; "The Arthur of the English Poets," by Maynadier, and Shakespeare's art examined by Moulton, Canning, Baker, and Werder. Delightful examples of the rare art of essay writing can be accredited to A. C. Benson, Lucas, Maeterlinck, and Brander Mathews. In the realm of drama may be mentioned Mackaye's "Sappho and Phaon," Johnston's "Goddess of Reason," and Shaw's new plays. The erotic poems of Viereck aroused much unprofitable and indiscriminating discussion. Among books of reference there were the first volume of the "Catholic Encyclopaedia," Lockwood's "Lexicon to the English Poetical Works of John Milton," and useful bibliographies of Oliver Wendell Holmes, Lincoln, and of Christology. The increase of works on Esperanto and other "world languages" may be noted.

#### MISCELLANEOUS.

The year's travel books numbered Peary's "Nearest the Pole;" two works on Alaska by Cook and Dunn; one on Labrador by Wallace; two on the Congo by Starr and Richard Harding Davis; as well as Landon's "Across Wildest Africa." "The France of To-Day" was elucidated by Barrett Wendell, as was the United States after twenty-five years' absence by Henry James, and there were admirable descriptions of American localities and types by Prudden, Hough, Parrish, Paine, and Haney. Among many scientific books of popular interest may be selected the fourth volume in the "Cambridge Natural History," Kellogg's "Darwinism To-Day," Hobbs' "Earthquakes," Lankester's "The Kingdom of Man," Duncan's "Chemistry of Commerce," various works on nutrition, and Saleeby's "Worry, the Disease of the Age." Other special subjects were treated in James' "Pragmatism" (philosophy), Birdssey's "Individual Training in Our Colleges," Campbell's "The New Theology," Putnam's "Censorship of the Church of Rome," Galton's "Church and State in France," as well as in various works on the Incarnation, several books on Christian Science, notably by Mark Twain and Powell, and Friedman's "The Romance of the Salvation Army."

**Copyright Law of the United States.**

DIRECTIONS FOR SECURING COPYRIGHT UNDER THE REVISED ACTS OF CONGRESS, INCLUDING THE PROVISIONS FOR FOREIGN COPYRIGHT, BY ACT OF MARCH 3, 1891.

SECTION 4.952 of the Revised Statutes of the United States, in force December 1, 1873, as amended by the act of June 18, 1874, as amended by the act of March 3, 1891, provides that the author, inventor, designer, or proprietor of any book, map, chart, dramatic or musical composition, engraving, cut, print, or photograph or negative thereof, or of a painting, drawing, chromo, statuary, and of models or designs intended to be perfected as works of the fine arts, and the executors, administrators, or assigns of any such person, shall, upon complying with the provisions of this chapter, have the sole liberty of printing, reprinting, publishing, completing, copying, executing, finishing, and vending the same; and, in the case of a dramatic composition, of publicly performing or representing it, or causing it to be performed or represented by others. And authors or their assigns shall have exclusive right to dramatize or translate any of their works for which copyright shall have been obtained under the laws of the United States.

**PRINTED TITLE REQUIRED.**

A printed copy of the title of the book, map, chart, dramatic or musical composition, engraving, cut, print, photograph, or chromo, or a description of the painting, drawing, statue, statuary, or model or design, for a work of the fine arts, for which copyright is desired, must be delivered to the Librarian of Congress, or deposited in the mail, within the United States, prepaid, addressed "LIBRARIAN OF CONGRESS, WASHINGTON, D. C." This must be done on or before day of publication in this or any foreign country.

The printed title required may be a copy of the title-page of such publications as have title-pages. In other cases, the title must be printed expressly for copyright entry, with name of claimant of copyright. The style of type is immaterial, and the print of a typewriter will be accepted. But a separate title is required for each entry. The title of a periodical must include the date and number; and each number of a periodical requires a separate entry of copyright. Blank forms of application are furnished.

**FEEs.**

The legal fee for recording each copyright claim is 50 cents, and for a copy of this record (or certificate of copyright) under seal of the office an additional fee of 50 cents is required, making \$1 or \$1.50, if certificate is wanted, which will be mailed as soon as reached in the records. No money is to be placed in any package of books, music, or other publications. A money order or express order avoids all risk. In the case of publications which are the production of persons not citizens or residents of the United States, but who are citizens or subjects of any country with which the United States has copyright agreement, the fee for recording title is \$1. and 50 cents additional for a copy of the record. Certificates covering more than one entry in one certificate are not issued. Express orders, money orders, and currency only taken for fees. No postage stamps received.

**DEPOSIT OF COPIES.**

Not later than the day of publication in this country or abroad, two complete copies of the best edition of each book or other article must be delivered at the office of the Librarian of Congress, or deposited in the mail within the United States, addressed "LIBRARIAN OF CONGRESS, WASHINGTON, D. C.," to perfect the copyright.

The freight or postage must be prepaid. Books must be printed from type set in the United States or plates made therefrom; photographs from negatives made in the United States; chromos and lithographs from drawings on stone or transfers therefrom made in the United States. In the case of paintings, drawings, statuary, or models or designs for works of art, a photograph of the article is to be sent in lieu of the two copies. Without the deposit of copies required the copyright is void, and a penalty of \$25 is incurred. No copy is required to be deposited elsewhere.

The law requires one copy of each new edition wherein any substantial changes are made to be deposited with the Librarian of Congress.

**NOTICE OF COPYRIGHT.**

No person shall maintain an action for the infringement of a copyright unless notice is given by inserting in every copy published, on the title-page or the page following, if it be a book; or if a map, chart, musical composition, print, cut, engraving, photograph, painting, drawing, chromo, statue, statuary, or model or design intended to be perfected as a work of the fine arts, by inscribing upon some visible portion thereof, or on the substance on which the same is mounted, the following words, viz., "Entered according to act of Congress, in the year —, by —, in the office of the Librarian of Congress, at Washington," or at the option of the person entering the copyright, the words: "Copyright, 19—, by —."

The law imposes a penalty of \$100 upon any person who has not obtained copyright who shall insert the notice, "Entered according to act of Congress," or "Copyright," etc., or words of the same import, in or upon any book or other article, whether such article be subject to copyright or not.

**TRANSLATIONS.**

The copyright law secures to authors and their assigns the exclusive right to translate or to dramatize any of their works; no notice is required to enforce this right.

**DURATION OF COPYRIGHT.**

The original term of copyright runs for twenty-eight years. Within six months before the end of that time, the author or designer, or his widow or children, may secure a renewal for the further term of fourteen years, making forty-two in all.

**RENEWALS.**

Application for renewal must be accompanied by printed title and fee; and by explicit statement of ownership, in the case of the author, or of relationship, in the case of his widow or children, and must state definitely the date of the original copyright. Within two months from date of renewal the record thereof must be advertised in an American newspaper for four weeks.

**TIME OF PUBLICATION.**

The time of publication is not limited by any law or regulation, but the courts have held that it should take place "within a reasonable time." Registration of title may be secured for a projected as well as for a completed work. But the law provides for no caveat or notice of interference—only for actual entry of title.

**ASSIGNMENTS.**

Copyrights are assignable by any instrument of writing. Such assignment is to be recorded in the office of the Librarian of Congress within sixty days from execution, "in default of which it shall be void as against any subsequent purchaser or mortgagee for a valuable consideration, without notice." The fee for this record and certificate is \$1. and for a certified copy of any record of assignment \$1. A copy of the record (or duplicate certificate) of any copyright entry will be furnished, under seal of the office, at the rate of 50 cents each.

### Statistics of the Press.

ROWELL'S American Newspaper Directory for 1907 reported the number of newspapers published in the United States and Canada as 22,898. Of these, 1,153 were Canadian publications. The following was the frequency of issue: Weekly, 16,252; monthly, 2,876; daily, 2,478; semi-monthly, 290; semi-weekly, 602; quarterly, 218; bi-weekly, 52; bi-monthly, 70; tri-weekly, 56—total, 22,898. The following shows the number of papers printed in the States and Canada in 1906-07.

### United States Geographic Board.

*Chairman*, Henry Gannett, Geological Survey, Department of the Interior; *Secretary*, Charles S. Sloan, Bureau of the Census, Department of Commerce and Labor; Frank Boud, General Land Office, Department of the Interior; Andrew Brain, Coast and Geodetic Survey, Department of Commerce and Labor; Major Adolph von Haake, Post-Office Department; Arnold B. Johnson, Light House Board, Department of Commerce and Labor; George W. Littlehales, Hydrographic Office, Department of the Navy; Prof. Otis T. Mason, National Museum, Smithsonian Institution; Dr. C. Hart Morris, Bureau of Biological Survey, Department of Agriculture; John S. Mills, Department of the Treasury; Lieut. - Col. Thaddeus W. Jones, General Staff, Department of War; William McNeil, Chief of the Bureau of Rolls and Library, Department of State; Overton W. Price, Forest Service, Department of Agriculture; C. M. Robinson, Government Printing Office; Com. Charles C. Rogers, Hydrographic Office, Department of the Navy.

By Executive Order of August 10, 1906, the official title of the United States Board on Geographic Names was changed to United States Geographic Board, and its duties enlarged. The Board passes on all unsettled questions concerning geographic names which arise in the departments, as well as determining, changing, and fixing place names within the United States and its insular possessions, and all names hereafter suggested by any officer of the Government shall be referred to the Board before publication. The decisions of the Board are to be accepted by all the departments of the Government as standard authority. Advisory powers were granted the Board concerning the preparation of maps compiled, or to be compiled, in the various offices and bureaus of the Government, with a special view to the avoidance of unnecessary duplication of work; and for the unification and improvement of the scales of maps, of the symbols and conventions used upon them, and of the methods of representing relief. Hereafter, all such projects as are of importance shall be submitted to this Board for advice before being undertaken.

## The Printing Industry.

(From Census Bulletin No. 79.)

The total number of establishments in this industry in 1905 was 26,422, a number larger than was reported for any other industry.

The capital required in 1905 to conduct the printing and publishing business was \$385,008,604. It was approximately double that required in 1890, and it was doubtless due to a considerable degree to mechanical changes which have taken place in this industry during the past ten or fifteen years. The total value of products reported in 1905 was \$496,061,357.

Of the total number of establishments in the entire industry, about one-third were exclusively book and job establishments, one-sixth exclusively newspaper and periodical establishments, and over one-half were combination establishments—that is, producing both book and job printing and newspapers and periodicals. In value of products the exclusive establishments were practically on even terms, the amount reported for book and job printing being \$186,759,503 and for newspapers and periodicals, \$184,736,800; but in the combination establishment the value of newspaper and periodical products greatly outweighed the value of book and job printing. The entire value of products distributed between the two general classes was \$233,230,842 for book and job printing and \$256,816,282 for newspapers and periodicals.

### BOOK AND JOB PRINTING.

The absolute increase in value of book and job products during the five-year period was unprecedented. From 1880 to 1890 it was approximately \$4,500,000; from 1890 to 1900, \$28,000,000; and during the half decade from 1900 to 1905, \$62,000,000. At this rate the value of products will double in 1910 as compared with 1900.

Without using specific cases for purposes of illustration it is difficult to appreciate the magnitude of many orders for ordinary commercial printing, editions of hundreds of thousands of pamphlets and even of many millions being not infrequently produced by the larger job establishments in New York, Chicago, and other centres of trade. Job printing has been materially benefited by the extension of rural free delivery, which has greatly stimulated catalogue and circular production.

Moreover there are many new requirements for miscellaneous printing. The transfer system, for example, requiring more than 3,000,000,000 transfer slips annually for the trolley systems of the United States, represents approximately 30,000,000 printed sheets of paper.

The telephone, now extended to all parts of the United States, depends upon the subscriber's book, which is an indispensable adjunct of each instrument. Of these books the cities having more than 1,000,000 inhabitants—New York, Chicago, and Philadelphia—required approximately 1,400,000 copies in 1905, containing more than 2,500,000 pounds of paper and requiring presswork aggregating nearly 42,000,000 impressions, equivalent to the work of one cylinder press turning out 10,000 impressions per day for fourteen years of working days.

The aggregate number of copies of all newspapers and periodicals in the United States published during the census year 1905 was 10,325,143,188.

### NEWSPAPERS AND PERIODICALS.

The value of products of newspapers and periodicals arises from two sources of income—subscriptions and sales, and advertising. At the Census of 1880 the assets derived from subscriptions and sales exceeded those from advertising by almost \$11,000,000, or approximately one-fourth. In 1890 the products of both branches were of almost equal value, subscriptions and sales, however, being greater by \$1,000,000. At the Census of 1900 advertising took the lead, with an excess of nearly \$16,000,000. Since 1900 this lead has been further increased, and in 1905 amounted to nearly \$34,000,000.

In 1880 the total value of advertising was equivalent to the expenditure of 78 cents per capita; in 1890, \$1.13; in 1900, \$1.26; and 1905, \$1.79, on the basis of estimated population June 1, 1904. The per capita value of advertising thus more than doubled from 1880 to 1905. On the other hand, the per capita value of subscriptions and sales increased much less rapidly, rising from 99 cents in 1880 to \$1.37 in 1905.

An attempt was made at this census to report separately the Sunday issue of daily papers, but was found to be impracticable. It was found, however, that the Sunday edition of dailies in 1905 amounted to 11,539,021 copies per issue, contributed by 456 papers, as compared with a total daily circulation per issue of 21,079,130.

The aggregate circulation of weekly papers per issue was 37,732,037 in 1905.

In 1905 the aggregate circulation of the monthly oustriped that of every other class and amounted to 64,306,155 per issue, almost half the total circulation per issue of all classes of publications in the United States.

## The Production of Paper.

(From Census Bulletin No. 80.)

At the census of manufactures taken in 1905 the reported value of the products of this industry was \$188,715,189. The industry gave employment to 65,964 wage-earners, and the capital invested in it was reported as \$277,444,471.

Of the total value of the product (\$188,715,189), news paper represented \$35,906,460; book paper, \$37,403,501; fine paper, \$22,249,170; wrapping paper, \$30,435,592; boards, \$16,959,557. The aggregate value of tissue papers was \$5,056,438; of blotting paper, \$1,046,790; of building, roof, asbestos, and sheathing papers, \$4,845,628; and of hanging, or wall paper \$3,013,464.

In the interval between 1900 and 1905, the production of news paper increased in value \$15,814,589, or 73.7 per cent.; the production of book paper by \$12,532,550, or 50.4 per cent.; and that of fine paper, consisting mainly of writing paper, by \$6,353,196, or 40 per cent. At the Census of 1900, 912,322 tons of news paper were reported; 515,547 tons of book paper; and 131,634 tons of writing paper.

The total cost of materials used in this industry in 1905 was returned as \$111,251,478. Of this total, \$27,633,164 represented the cost of wood pulp and fibre purchased.

The principal raw materials used in the paper industry are wood, usually spruce or poplar, rags (used for fine paper), old or waste paper, manilla stock, jute bagging, rope, straw, sulphur, clay, etc. The most important of all these measured by quantity and cost is wood. In the paper and wood pulp industry, over three million cords of wood, having a total value of over \$20,000,000, were used in the year covered by the Census of 1905. The consumption of rags in this industry was in tonnage, 24,952, and in value, \$8,864,607. Of old or waste paper, 588,543 tons were used with a reported cost of \$7,430,335. The value of sulphur and other chemicals used in the industry represents a total of \$8,333,380.

## The Production of Books.

**French Publications**—Total 1906, 10,898; total 1905, 12,416; total 1904, 12,139; total 1903, 12,264; total 1902, 12,199; total 1901, 13,053; total 1900, 13,362.

The book productions in the Netherlands in 1905 were 3,290; Switzerland in 1903, 7,816; Belgium in 1904, 2,995; Denmark in 1903, 1,544; Roumania in 1901, 1,739; Spain and Portugal in 1897, 1,200; Austria-Hungary in 1899, 5,000; Japan in 1899, 21,255; Russia in 1901, 5,935; British India in 1891, 7,700; Turkey in 1890, 940; Norway in 1903, 712; Sweden in 1900, 1,683; Poland in 1903, 934; Italy in 1900, 9,975. The total book publications of the world annually approximate 150,000. Paul Otlet, the Secretary of the Brussels International Bibliographic Institute, estimates the number of printed books since the invention of printing to January, 1900, at 12,163,000 separate works, and the number of periodicals at between fifteen and eighteen millions.

Mr. A. Growoll, editor of "The Publishers' Weekly," has furnished the statistics from which the above figures have been compiled.

## Esperanto.

### THE INTERNATIONAL LANGUAGE.

The following statement regarding Esperanto has been prepared by the New York Esperanto Society, and from the "Esperanto Key."

Esperanto is an artificial language invented by the Russian Dr. L. L. Zamenhof, of Warsaw, Poland. It has only one object in view, namely, to serve as an international auxiliary language; it is not in the least intended to replace the national languages. The first book in the new language was published in 1887.

The Esperanto words are mostly of Latin, but to some extent also of Anglo-German origin, so that at the first glance Esperanto has the familiar appearance of a Roman language.

The great success of Esperanto, which is now known and studied all over the world, is chiefly due to the facility with which it may be mastered. The pronunciation is strictly phonetic, making the study of spelling unnecessary. The grammar does not admit of any exceptions to the rules, and is so logical and simple that it may be learned completely in a few hours by any person who is familiar with the grammar of his mother tongue. The vocabulary consists of about 2,500 root words, a large majority of which is known to anyone whose language contains a great number of Latin roots—for instance, English.

In spite of this small number of root words Esperanto has been made rich in words and expressions by the adoption of certain affixes and certain methods of word combination. By these simple and easy means a considerable vocabulary may be obtained. Esperanto is a well-sounding language when spoken.

The merits of Esperanto having been recognized by such eminent authorities as Prof. Max Müller, Count L. Tolstoi and Sir William Ramsay, it has quietly and without ostentation conquered all obstacles, and spread triumphantly over the whole world. Its grammar has been translated into some 28 languages and dialects, and nearly 30 monthly journals are devoted to its propaganda.

While in Canada, Mexico and South America Esperanto has been zealously studied for many years, it was almost unknown in the United States until 1905. In the beginning of that year the first society for the study and propagation of Esperanto was formed in Boston, Mass., and in the following July the New York Esperanto Society was founded. Through the efforts of these two societies and others, which had since been commenced in Philadelphia and other parts of this country, Esperanto spread rapidly. An American Esperanto Association has been founded, and two Esperanto monthly magazines are published: the *Amerika Esperantisto* and the *American Esperanto Journal*, in Oklahoma City, Okla., and Boston, Mass., respectively.

Esperanto offers an immediate advantage by laying open to the possessor the whole world. It breaks down the barriers of speech and procures for one in every land a multitude of persons who can understand one's language and are ready to exchange ideas and service with him.

If one wishes to correspond with people of different nations, with whose languages he is not conversant, for the purposes of commerce, science, information or amusement—this can be accomplished easily by the help of Esperanto. Where travellers of different nations may only with difficulty understand one another by means of a few written Latin words—the pronunciation of Latin being different in different nations—with Esperanto they would be able to speak together and to help one another.

### THE STUDY OF ESPERANTO.

The New York Esperanto Society has been formed to promote the study of Esperanto and to enable students to acquire a thorough knowledge of this language and the ability of conversing freely in it. The meetings of the society take place every Friday evening, from 8 to 10 o'clock, at No. 80 East 116th Street, New York. Free instruction is given to the members. The initiation fee for joining the society is \$1.00. The dues are \$3.00 a year, payable 25 cents a month. The officers of the society are: Dr. M. Talmey, President; Joseph Kubic, Vice-President; David H. Dodge, Financial Secretary; Alexander Duff, Treasurer; Andrew Kangas, No. 1061 Prospect Avenue, New York, Secretary, from whom further information may be obtained.

\* The French Academy is one of five academies, and the most eminent, constituting the Institute of France. It was founded in 1635 by the Cardinal Richelieu, and reorganized in 1816. It is composed of 40 members, elected for life, after personal application and the submission of their nomination to the head of the State. It meets twice weekly, at the Palace Mazarin, 23 Quai Conti, Paris, and is "the highest authority on everything appertaining to the niceties of the French language, to grammar, rhetoric, and poetry, and the publication of the French classics." The chief officer is the secretary, who has a life tenure of his position. The present permanent secretary is Marie L. A. G. Boissier, who was elected an Academician in 1876. A chair in the Academy is the highest ambition of most literary Frenchmen.

The other academies of the Institute of France are: The Academy of Inscriptions and Belles-Lettres, with 40 members; Academy of Sciences, with 68 members; Academy of Fine Arts, with 40 members (as follows: Painting, 14, sculpture, 8, architecture, 8, engraving, 4, musical composition, 6), and Academy of Moral and Political Science, with 40 members. All members are elected for life.

**The Carnegie Hero Fund.**

IN April, 1904, Andrew Carnegie created a fund of \$5,000,000 for the benefit of the dependents of those losing their lives in heroic effort to save their fellow men, or for the heroes themselves if injured only. Provision was also made for medals to be given in commemoration of heroic acts.

The endowment known as "The Hero Fund" was placed in the hands of a commission composed of twenty-one persons, residents of Pittsburgh, Pa., of which Charles L. Taylor is President, and F. M. Wilnot, Secretary, and Manager of the fund.

In his letter to the Hero Fund Commission Mr. Carnegie outlined the general scheme of the fund thus: "To place those following peaceful vocations who have been injured in heroic effort to save human life, in somewhat better positions pecuniarily than before, until able to work again. In case of death, the widow and children or other dependents are to be provided for until she remarries, and the children until they reach a self-supporting age. For exceptional children, exceptional grants may be made for exceptional education. Grants of sums of money may also be made to heroes or heroines as the commission thinks advisable—each case to be judged on its merits."

The fund applies only to acts performed within the United States of America, the Dominion of Canada, the Colony of Newfoundland, and the waters thereof, and such acts must have been performed on or after April 15, 1904.

The Commission has awarded eighty-seven medals: forty-seven bronze, thirty-five silver, and five gold. In addition to the medal, money has been given for disablement benefits and special purposes, and for the dependents of heroes who lost their lives, amounting to \$53,750. The Commission has also awarded \$64,462 for relief of sufferers from disasters: at Brockton, Mass., \$10,000, and from the California earthquake, \$54,462.

**Carnegie Libraries.**

ANDREW CARNEGIE has given nearly 1,700 library buildings in the United States and abroad.

## The Library of Congress.

The Library of Congress was established in 1800, destroyed in 1814 by the burning of the Capitol, afterward replenished by the purchase by Congress of the library of ex-President Jefferson, 6,760 volumes (cost, \$23,000); in 1851, 35,000 volumes destroyed by fire; in 1852, partially replenished by an appropriation of \$75,000; increased (1) by regular appropriations by Congress; (2) by deposits under the copyright law; (3) by gifts and exchanges; (4) by the exchanges of the Smithsonian Institution, the library of which (40,000 volumes) was, in 1866, deposited in the Library of Congress with the stipulation that future accessions should follow it. Sixty sets of Government publications are at the disposal of the Librarian of Congress for exchange, through the Smithsonian, with foreign governments, and this number may be increased up to 100. Other special accessions have been: The Peter Force collection (22,529 volumes, 37,000 pamphlets), purchased 1857, cost \$100,000; the Count de Rochambeau collection (manuscript), purchased 1855, cost \$20,000; the Toner collection (24,484 volumes (numerous pamphlets), gift in 1882 of Dr. Joseph M. Toner, the Hubbard collection (engravings), gift in 1888 of Mrs. Gardiner G. Hubbard.

The collection is now the largest in the Western Hemisphere, and third in the world. It comprised at the end of the fiscal year (June 30, 1907) about 1,433,348 printed books and pamphlets (including the law library of which, while a division of the Library of Congress, still remains at the Capitol), manuscripts, maps and charts, pieces of music, and photographs, prints, engravings, and lithographs. Of the printed books, probably one-sixth are duplicates not in use.

The collection is rich in history, political science, in official documents, National, State, and foreign, and in Americana, including important files of American newspapers and original manuscripts (colonial, revolutionary, and formative periods). Many of the rare books and manuscripts belonging to the Library are exhibited in show cases on the second floor.

The Smithsonian deposit is strong in scientific works, and includes the largest assemblage of the transactions of learned societies which exists in this country.

In 1897 the main collection was removed from the Capitol to the building erected for it under the acts of Congress approved April 15, 1886, October 2, 1888, and March 2, 1889, at a cost of \$6,347,000 (limit by law, \$6,500,000), exclusive of the land, which cost \$530,000. The architect who furnished the original designs was John L. Smithmeyer and Paul J. Felz. By the act of October 2, 1893, before the foundations were laid, Thomas L. Casey, Chief of Engineers of the Army, was placed in charge of the construction of the building, and the architectural details were worked out by Paul J. Felz and Edward R. Casey. Upon the death of General Casey, in March, 1896, the entire charge of the construction devolved upon Bernard R. Green, General Casey's assistant, and under his superintendence the building was completed in February, 1897, opened to the public November, 1897. The building occupies three and three-quarter acres upon a site ten acres in extent at a distance of 1,270 feet east of the Capitol, and is the largest and most magnificent library building in the world. In the decorations some forty painters and sculptors are represented—all American citizens. The floorspace is 326,195 square feet, or nearly 8 acres. The book stacks contain about 50 miles of shelving, affording space for 2,600,000 octavo volumes.

The Library is maintained by annual appropriations by Congress for various purposes, including the purchase of books.

Plans have been submitted to Congress for covering in one of the interior courts to provide for needed increase of book space.

**Library Service.**—Library proper, 236 employes; Copyright, 69; distribution of cards, 12; law indexing, 8; disbursement and care of building and grounds, 127. Total, 452. By virtue of the act of 1897, employes in the Library proper are appointed by the Librarian of Congress "solely with reference to their fitness for their particular duties."

**Copyright Office.**—The Copyright Office is a distinct division of the Library of Congress, and is located on the ground floor, south side; open 9 to 4.30. It is under the immediate charge of the Register of Copyrights, who, by the act of February 19, 1897, is authorized "under the direction and supervision of the Librarian of Congress," to perform all the duties relating to copyrights. Copyright registration was transferred to the Librarian of Congress by the act of July 5, 1874. Of most articles copyrighted two copies, and of some one copy, must be deposited in the Library of Congress to perfect copyright. Entitled by statute to draw books for home use are the following: The President, the Vice-President, Senators, Representatives, and Delegates in Congress (no books may be given out upon the orders of members in favor of those who are not members); Heads of Departments; the Justices, Reporter, and Clerk of the Supreme Court; the Judges and Clerk of the Court of Claims; Judges of the Court of Appeals of the District of Columbia and Judges of the Supreme Court of the District of Columbia; representatives at Washington of foreign governments; the Solicitor-General and Assistant Attorney-General; the Secretary of the Senate; the Clerk of the House of Representatives, the Solicitor of the Treasury, ex-Presidents of the United States; the Chaplains of the two Houses of Congress; the Secretary and Regents of the Smithsonian Institution; the members and Secretary of the Interstate Commerce Commission, and Chief of Engineers of the Army.

**Inter-Library Loans.**—While not a lending library, but a reference library, primarily and essentially, the Library of Congress maintains an inter-library loan system by which special service is rendered to scholarship by the lending of books to other libraries for the use of investigators, engaged in serious research, which it is not within the power or duty of the Library in question to supply, and which at the time, are not needed in Washington.

**Hours.**—The Library building is open to the public all days in the year excepting legal holidays. The hours are from 9 A. M. to 10 P. M. week days, and from 2 P. M. to 10 P. M. Sundays.

The Main Reading Room, and Periodical Reading Room are open to the public from 9 A. M. to 10 P. M. week days, and from 2 P. M. to 10 P. M. Sundays.

The Librarian's Office and the Department of Bibliography are open for the transaction of business from 9 A. M. to 4.30 P. M. week days, and from 2 P. M. to 6 P. M. Sundays.

The other administrative divisions of the Library, including the Copyright Office, are open for the transaction of business from 9 A. M. to 4.30 P. M. all days in the year, excepting legal holidays and Sundays.

**Librarians Since the Inception of the Library.**—1800-1814, the Clerk of the House of Representatives (for the time being); 1815-1829, George Watterston; 1829-1861, John S. Meellan; 1861-1864, John G. Stephenson; 1864-1897 (June 30), Ainsworth R. Spofford; 1897-January 17, 1899, John Russell Young; 1899 (April 5), Herbert Putnam.

**General Administration.**—Librarian of Congress, Herbert Putnam; Chief Assistant Librarian, A. B. Spofford.

### The Alfred B. Nobel Prizes.

THE Swedish scientist, Alfred B. Nobel, the inventor of dynamite, died in 1896, bequeathing his fortune, estimated at \$9,000,000, to the founding of a fund, the interest of which should yearly be distributed to those who had mostly contributed to "the good of humanity." The interest is divided in five equal shares, given away, "One to the person who in the domain of physics has made the most important discovery or invention, one to the person who has made the most important chemical discovery or invention, one to the person who has made the most important discovery in the domain of medicine or physiology, one to the person who in literature has provided the most excellent work of an idealistic tendency, and one to the person who has worked most or best for the fraternization of nations, and the abolition or reduction of standing armies, and the calling in and propagating of peace congresses."

The prizes for physics and chemistry are awarded by the Swedish Academy of Science, that for physiological or medical work by the Caroline Institute (the faculty of medicine in Stockholm), that for literature by the Swedish Academy in Stockholm, and the peace prize is awarded by a committee of five persons, elected by the Norwegian Storting.

In accordance with these statutes the awarders of the prizes (the four above named institutions) elect fifteen deputies for two consecutive years, the Academy of Science electing six, and the other prize awarders three each. These deputies elect for two consecutive years four members of the Board of Directors of the Nobel Institute, which Board, exclusively consisting of Swedes, must reside in Stockholm. A fifth member, the President of the Board, is nominated by the Government. The Board of Directors has in its care the funds of the institution, and hands yearly over to the awarders of the prizes the amount to be given away. The value of each prize is on an average \$40,000. The distribution of the prizes takes place every year on December 10, the anniversary of Mr. Nobel's death. Full information can be obtained from "Nobelstiftelsens Styrelse" (The Board of Directors of the Nobel Institute), Stockholm, Sweden.

The awards made until now have been: Physics, 1901, W. C. Röntgen, German; 1902, H. A. Lorentz and P. Zeeman, Hollanders; 1903, H. A. Becquerel, P. Curie, and Marie Curie, all French; 1904, Lord Rayleigh, English; 1905, Prof. Philipp Leonard, of Kiel University, German; 1906, Prof. J. J. Thomson, of the University of Cambridge, English; 1907, Prof. Albert A. Michelson, of the University of Chicago, American.

Chemistry: 1901, J. H. van Hoff, Professor of the Berlin University, Hollander; 1902, E. Fischer, German; 1903, S. A. Arrhenius, Swede; 1904, Sir William Ramsay, English; 1905, Adolph von Baeyer, German; 1906, Prof. Henri Moissan, French; 1907, Prof. Edouard Buchner, of the Berlin University, German; Sir William Crookes, English.

Medicine: 1901, E. A. von Behring, German; 1902, R. Ross, English; 1903, N. R. Finsen, Dane; 1904, Pavloff, Russian; 1905, Prof. Robert Koch, German; 1906, Prof. Ramon y Cajal, Spanish; Professor Golgi, French; 1907, Dr. Laveran, of Paris, French.

Literature: 1901, R. F. A. Sully-Prudhomme, French; 1902, Th. Mommsen, German; 1903, Björnsterne Björnson, Norwegian; 1904, Frederic Mistral, French, and José Echegaray, Spaniard; 1905, Henry Sienkiewicz, Pole; 1906, Professor Carducci, Italian; 1907, Rudyard Kipling, English.

Peace: 1901, Henri Dunant, Swiss, and Fr. Passy, French; 1902, E. Ducommun and A. Gobat, both Swiss; 1903, W. R. Cremer, English; 1904, The Institution of International Law, the first award to an institution; 1905, Baroness von Suttner, Austrian; 1906, President Theodore Roosevelt, American; 1907, Ernesto Teodoro Moneta, Italian, and Louis Renault, French.

### Simplified Spelling.

#### ADOPTED BY COLUMBIA UNIVERSITY.

ON December 14, 1906 President Roosevelt withdrew his order to the Public Printer to use the new spelling of the 300 words (which appeared in THE WORLD ALMANAC for 1907) in government publications, the committees on printing of Congress not approving of the same. The Board of Trustees of Columbia University, however, on November 15, 1907, officially adopted the following 180 reformed words to be used in all University printing.

## Organizations for the Promotion of Education.

### CHAUTAQUA INSTITUTION.

*Chairman*—John H. Vincent. *President*—George E. Vincent. *President of Trustees*—W. H. Hickman. *Secretary*—Ira M. Miller. *Treasurer*—Warren F. Walworth. *Chairman Executive Board*—J. C. Neville. *General Director*—Scott Brown. Located at Chautauqua, N. Y.

The *Chautauqua Assembly*, now *Chautauqua Institution*, was organized in 1874 as a result of the joint plan of Lewis Miller and John H. Vincent. It holds annual sessions during July and August at Chautauqua, N. Y. The plan includes summer school courses of instruction in language, literature, science, and art, open lectures, concerts, and recitals, and various forms of platform entertainment and out-of-door recreation. Local assemblies patterned after the mother Chautauqua convene in different places throughout the United States and number over two hundred.

The *Chautauqua Literary and Scientific Circle* (Kate F. Kimball, Chautauqua, N. Y., Executive Secretary) was organized at Chautauqua in 1878, with the aim of continuing the influence of the Assembly throughout the year in all parts of the country. Since that time more than two hundred and sixty thousand members have been enrolled. The Circle aims to promote the habit of reading and study in history, literature, science, and art, in connection with the routine of daily life. Each year four books are specially published for the course, The Chautauquan Magazine (Frank Chapin Bray, Editor) and the membership book with review outlines. The essentials of the plan are: A definite course covering four years, each year complete in itself; specified volumes approved by the counselors, allotment of time by the week and month, a monthly magazine with additional readings and notes, review outlines, and other aids. Individual readers may pursue the course alone, or local circles may be formed by three or four members. The time required is about one hour daily for nine months. Certificates are granted to those who complete the course. Seals are affixed to the certificates granted for collateral and advanced reading. Any one may become a member of the C. L. S. C. by sending an application, together with \$3 for the unit (four books, membership book, and magazine for one year), to Chautauqua Institution, Chautauqua, N. Y.

### THE PEABODY EDUCATION FUND.

In 1867 and 1869 George Peabody established a fund of \$3,500,000, to be devoted to education in the Southern States of the Union. Of this amount \$1,380,000 being in Mississippi and Florida bonds was not available, those of Mississippi having been repudiated and those of Florida issued while it was a Territory, never having been recognized as legal by its authorities. The fund was placed in the charge and control of fifteen trustees, of whom Mr. Robert C. Winthrop, of Massachusetts, was the chairman. Mr. Peabody died in London in 1869. The trustees hold meetings annually, usually in New York. They fill vacancies caused by death or resignation. The present trustees are: Chief Justice Fuller, President of the Board; Joseph H. Choate, First Vice-President; D. C. Gilman, Second Vice-President; Dr. Samuel A. Green, Secretary; J. Pierpont Morgan, M. K. Jesup, of New York; President Theodore Roosevelt, of New York; Samuel A. Green, Richard Olney, and Right Rev. William Lawrence, of Massachusetts; William A. Courtenay, of South Carolina; James D. Porter, of Tennessee; Henderson M. Somerville, of New York; George Peabody Wetmore, of Rhode Island; Charles E. Penner, of Louisiana; Hoke Smith, of Georgia, and Right Rev. William C. Doane, Prof. Wickliffe Rose is General Agent of the fund, with headquarters at No. 2 Rector Street, New York, and has charge of the distribution of the fund in the several Southern States. In its earlier history the chief aim of the fund was to encourage and secure the establishment of public school systems for the free education of all children. That having been accomplished, the income of the fund is now used for the training of teachers through Normal Schools and Teachers' Institutes. In the year ending October 1, 1906, the amount distributed was \$92,000. Power was conferred by the deed of trust on the trustees to distribute the fund at the expiration of thirty years, which period ended in 1897. In January, 1905, the trustees decided, by a vote of 11 to 2, to dissolve the trust. It was expected to take several years to wind it up. The corporation will then cease to exist.

### THE JOHN F. SLATER FUND.

In 1882 Mr. John F. Slater, of Connecticut, placed in the hands of trustees the sum of \$1,000,000, for the purpose of "uplifting the lately emancipated population of the Southern States and their posterity." For this patriotic and munificent gift the thanks of Congress were voted, and a medal was presented. Neither principal nor income is expended for land or buildings. Education in industries and the preparation of teachers are promoted in institutions believed to be on a permanent basis. The board consists of D. C. Gilman, of Johns Hopkins University, as President; Chief Justice Fuller, as Vice-President, Morris K. Jesup, as Treasurer, and Bishops Potter and Galloway, and Messrs. William A. Slater, John A. Stewart, Alexander E. Orr, Cleveland F. Dodge, Bishop Ellison Capers and Seth Low. Dr. Wallace Buttrick, 2 Rector Street, New York, is the General Agent of the fund. The fund is a potential agency in working out the problem of the education of the negro, and over half a million of dollars has already been expended. By the extraordinary fidelity and financial ability of the treasurer, the fund, while keeping up annual appropriations, has increased to \$1,500,000. Schools established by States, denominations, and individuals are helped by annual donations. Among the most prominent are the Hampton Normal and Industrial, the Spelman, the Tuskegee, and schools at Orangeburg, S. C.; Tougaloo, Miss.; Marshall, Tex.; Raleigh, N. C.; New Orleans, etc.

### THE GENERAL EDUCATION BOARD.

The General Education Board was organized in New York February 27, 1902, and incorporated by act of Congress, signed January 12, 1903. The following are members of the Board: Frederick T. Gates, Chairman; George Foster Peabody, Treasurer; Wallace Buttrick, Secretary; Daniel C. Gilman, Morris K. Jesup, Robert C. Ogden, Walter H. Page, J. D. Rockefeller, Jr., Albert Shaw, Starr J. Murphy, Hugh H. Hanna, E. Benjamin Andrews, Edwin A. Alderman, Hollis B. Frissell, Harry Pratt Judson. The purposes of the Board are to promote education in the United States, without distinction of race, sex, or creed, and especially to promote, systematize, and make effective various forms of educational beneficence.

### THE SOUTHERN EDUCATION BOARD.

The Southern Education Board of the Conference for Education in the South—the outcome of the Capon Springs and Winston-Salem Conferences—has been organized with these officers and members: *Chairman*, Robert C. Ogden, New York; *Treasurer*, George Foster Peabody, New York; *Secretary and Executive Secretary*, Edgar Gardner Murphy, Montgomery, Ala.; *Associate Secretary*, G. S. Dickerman, New Haven, Ct.; *Comptroller*, Edwin A. Alderman, *Chairman*, H. B. Frissell, Edgar Gardner Murphy, D. F. Houston, H. E. Fries, P. P. Claxton, S. J. Bowne, S. C. Mitchell. The object of this organization is to awaken and inform public opinion and secure additional legislation and revenues for the betterment of the public schools, "the supreme public need of our time."

### The Hall of Fame.

MARCH 5, 1900, the Council of New York University accepted a gift of \$100,000, afterward increased to \$250,000, from a donor, whose name was withheld, for the erection and completion on University Heights, New York City, of a building to be called "The Hall of Fame for Great Americans." A structure was accordingly built in the form of a semi-circle, 170 feet, connecting the University Hall of Philosophy with the Hall of Languages. On the ground floor is a museum 200 feet long by 40 feet wide, consisting of a corridor and six halls to contain mementoes of the names that are inscribed above. The colonnade over this is 400 feet long with provision for 150 panels, each about 2 feet by 6 feet, each to bear the name of a famous American.

Only persons who shall have been dead ten or more years are eligible to be chosen. Fifteen classes of citizens were recommended for consideration, to wit: Authors and editors, business men, educators, inventors, missionaries and explorers, philanthropists and reformers, preachers and theologians, scientists, engineers and architects, lawyers and judges, musicians, painters and sculptors, physicians and surgeons, rulers and statesmen, soldiers and sailors, distinguished men and women outside the above classes. Fifty names were to be inscribed on the tablets at the beginning, and five additional names every fifth year thereafter, until the year 2000, when the 150 inscriptions will be completed. In case of failure to fill all the panels allotted, the vacancies are to be filled in a following year.

In February, 1904, the plan was announced of an additional structure in the form of a loggia joining the colonnade on the north, having 30 panels for foreign born Americans, six to be filled in 1905, and beyond this of a Hall of Fame for Women, about 30 by 60 feet, with a museum on the ground floor and a main story above of 28 columns supporting a pedimented roof, with places for 60 tablets, 10 to be filled in 1905.

The rules prescribed that the Council should invite nominations from the public. Every nomination seconded by a member of the University Senate should be submitted to an electorate of one hundred eminent citizens selected by the Council.

In October, 1900, the University Senate received the ballots of the electors. Of the one hundred judges selected ninety-seven voted. The number of names which had been submitted to them was 252. Of these each judge returned a vote for fifty. The rule required that no candidate receiving less than fifty-one votes could be accepted. The returns showed that but twenty-nine candidates received the required number and were chosen. These were as follows: George Washington, Abraham Lincoln, Daniel Webster, Benjamin Franklin, Ulysses S. Grant, John Marshall, Thomas Jefferson, Ralph Waldo Emerson, Henry W. Longfellow, Robert Fulton, Washington Irving, Jonathan Edwards, Samuel F. B. Morse, David G. Farragut, Henry Clay, Nathaniel Hawthorne, George Peabody, Robert E. Lee, Peter Cooper, Eli Whitney, John J. Audubon, Horace Mann, Henry Ward Beecher, James Kent, Joseph Story, John Adams, William E. Channing, Gilbert Stuart, Asa Gray.

In October, 1905, under the rules named above, the Senate received the ballots of 95 Electors out of 101 appointed, of whom only 85 undertook to consider the names of women. A majority of 51 was demanded, but in the case of the names of women, a majority of only 47. The following persons were found to be duly chosen: John Quincy Adams, 59; James Russell Lowell, 58; William Tecumseh Sherman, 58; James Madison, 56; John Greenleaf Whittier, 53; Alexander Hamilton, 58; Louis Agassiz, 83; John Paul Jones, 54; Mary Lyon, 58; Emma Willard, 50; Maria Mitchell, 48. Among the names which received less than a majority vote in the 1905 election were those of Oliver Wendell Holmes 48, Phillips Brooks 48, Bryant Parkman and Motley 46 each; Poe and Cooper 43 each; Bancroft and Greeley 39 each; Nathanael Green and Mark Hopkins 38 each; Joseph Henry 32; Rufus Choate 31.

The Hall was dedicated May 30, 1901, when twenty-five or more national associations each unveiled one of the bronze tablets in the colonnade, and on May 30, 1906, the eleven new tablets were unveiled, orations being given by the Governors of New York and Massachusetts.

### The Dickens Fellowship.

THE Dickens Fellowship is a worldwide league of English-speaking men and women whose purpose is to exemplify the teachings of Charles Dickens and to cultivate and diffuse the spirit which pervades his writings—the spirit of innocent festivity and mirth, of religion without bigotry, of charity without coldness, of universal philanthropy and human kinship. The society began its existence in London in October, 1902, and was designed by its founders not only to promote intellectual sociality but to serve as an agency for the performance of good works. The object and aims of the Fellowship are:

"To knit together in a common bond of friendship lovers of that great master of humor and pathos Charles Dickens. To spread the love of humanity, which is the keynote of all his work. To take such measures as may be expedient to remedy or ameliorate those existing social evils which would have appealed so strongly to the heart of Charles Dickens, and to help in every possible direction the cause of the poor and the oppressed. To assist in the preservation and purchase of buildings and objects associated with his name and mentioned in his works."

The Fellowship is open to all, without restriction as to class, creed or nationality. On the list of Vice-Presidents of the society are the following: Sir Francis C. Burnand, Sir Arthur Conan Doyle, the Rev. Canon Benham, Lady Florence Dixie, Hall Caine, Sir L. Alma-Tadema, J. Comyns Carr, T. P. O'Connor, M. P.; Miss Georgiana Hogarth, J. M. Barrie, Harry Furniss, W. S. Gilbert and Algernon Charles Swinburne. Branches of the Fellowship have been formed not only throughout Great Britain but on the Continent, in the United States and Canada, India, Ceylon, the Transvaal, Cape Town, Gold Coast of Africa, Australia, Egypt and the Persian Gulf.

The officers of the Manhattan (New York) branch are: *President*—Charles H. Govan. *Vice-Presidents*—Hon. H. A. Metz, Benjamin Franklin, H. M. Leipzig, Ph. D., Mrs. T. E. Lonergan, W. V. Hirsch, Miss Jessie Stanley Mook, W. A. Boyd, Mrs. E. B. Webber, John J. O'Rorke, Mrs. Marion A. Cary, Miss Helen Abendroth, Mrs. Isabella Keyes. *Secretary*—A. Maerz. *Treasurer*—A. E. Squire. *Executive Council*—J. Woolsey Shepard, Chairman, Mrs. T. E. Lonergan, W. V. Hirsch, Mrs. L. G. Wilder, F. A. Lyons, M. D., John J. O'Rorke, W. L. Grosvenor, Charles Ross Keen. Membership fees are \$1 initiation and \$2 per annum annual dues. Secretary's office—71 Broadway, New York. Dickens entertainments are a feature. Meetings are held on or about the 7th of every month from October to May, inclusive, and each meeting is preceded by a dinner, which is served at 6.30 to 7 P. M., and ends at 8.15.

Beginnings of Famous Universities.

THE University of Oxford has the reputation of having been founded by King Alfred in 872.  
 The first college of the University of Cambridge was founded by Hugo, Bishop of Ely, in 1257.  
 The University of Paris was founded by King Philip II. about 1200.  
 The first university in the German Empire was at Prague, Bohemia, 1348.  
 The Czar Alexander I. founded the Universities of St. Petersburg and Moscow in 1802.  
 The oldest Spanish University is that of Salamanca, founded in 1240.  
 The University of Copenhagen, Denmark, was founded in 1479.  
 The University of Upsala, Sweden, was founded in 1477.  
 The oldest Italian universities are Bologna, founded 1200; Padua, 1222; Naples, 1224; Genoa, 1243; Perugia, 1276; Macerata, 1290. There were none more founded between 1300 and 1550. Italy was the greatest resort of students for the higher education in the Middle Ages.  
 Trinity College, Dublin, was incorporated by royal charter in 1591.  
 The University of Edinburgh was founded in 1582 by a charter granted by King James VI, of Scotland.  
 Harvard University had its beginning at Newtown, afterward Cambridge, Mass., in 1636.  
 Yale University had its beginning at Saybrook, Ct., in 1700, and was removed to New Haven in 1716.  
 Columbia University was chartered as King's College in 1754. The name was changed to Columbia College in 1784 and Columbia University in 1896.  
 Princeton University, founded in 1746, was chartered as the College of New Jersey, and did not assume its present name officially until its one hundred and fiftieth anniversary in 1896.  
 William and Mary College (first steps taken toward establishing it in 1617) erected at Williamsburg, Va., and charter granted in 1693.  
 The first common schools established by legislation in America were in Massachusetts, 1645; but the first town school was opened at Hartford, Ct., prior to 1642.  
 The University of Pennsylvania had its beginning at Philadelphia, Pa., in 1740. It was chartered in 1753 as the Academy and Charitable School in the Province of Pennsylvania, and received a further charter as a college in 1755. Its present title dates from 1791.  
 The University of Jagiello, of Cracow, Poland, where Copernicus received his education, was founded in 1364 by the Polish King Kazimiers the Great, and endowed by a later Polish King, Jagiello, in 1400.

# The Public Schools of New York City. 555

(Compiled by A. Emerson Palmer, Secretary of the Board of Education.)

Public education in New York City began with the founding of the Free School Society (after 1826 the Public School Society) in 1805. The society began in a small way, depending upon private subscriptions, but soon received aid from the city. It gradually expanded, and until 1842 had control of the moneys supplied for educational purposes by the city and the common school fund of the State. This condition of affairs was unique. The society, being under the direction of high-minded citizens, enjoyed a large degree of public confidence. So anomalous a system could not last, however, and by an act of the Legislature, passed in 1842, the Board of Education was established. The Public School Society continued to conduct its schools until 1853, when, by mutual consent, they were all taken over by the Board. The society at that time had more than a hundred schools; the value of the property it transferred to the city was estimated at \$450,000, and during its existence it educated some 600,000 children. The Board of Education was an elective body from 1842 to 1871, the members being chosen first by wards and from 1853 by school districts; since 1871 they have been appointed by the Mayor. In Brooklyn a Board of Education was created in 1843; the members were chosen by the Common Council until 1862, in which year the appointing power was vested in the Mayor. When consolidation took effect, in 1898, separate school boards were provided for the several boroughs (Manhattan and the Bronx being united), with a central Board of Education (a delegated body) having charge of the finances, the erection and repair of buildings, the acquiring of sites, the purchase and distribution of supplies, etc. This system was dropped on the revision of the Charter in 1901, and since 1902 there has been one Board of Education for the city. It consists of forty-six members—twenty-two for Manhattan, fourteen for Brooklyn, four each for the Bronx and Queens, and two for Richmond. Their term of office is five years.

The Board of Superintendents, consisting of the city superintendent of schools and eight associate superintendents, has large powers in the nomination, promotion, and transfer of teachers, the recommendation of text-books and scholastic supplies, the determination of courses of study, the fixing of qualifications for teachers' licenses, etc. Its important acts require the approval of the Board of Education. There are twenty-six district superintendents, whose duties are to visit schools and observe the work of teachers. The Board of Examiners (consisting of the city superintendent and four examiners) conducts all examinations for would-be teachers, and prepares eligible lists. The school superintendents and examiners, as well as the supervisor of free lectures, the superintendent of school buildings, and the superintendent of school supplies (whose duties are indicated by their titles), have terms of six years each. The Board of Education appoints all these officials, and also a secretary and auditor, having no fixed term. Principals and teachers are appointed by the Board of Education on the nomination of the Board of Superintendents. The merit system is in full operation, and teachers are appointed in order of standing. Beginners are on probation for three years, their licenses being renewable from year to year; when permanently licensed, their tenure is assured, and they cannot be removed except on charges. New teachers are appointed only after pursuing a training school course.

The budget appropriation of the Department of Education for 1907 was \$24,915,928.16, of which \$10,845,370.58 constituted the general school fund (for teachers' salaries). For 1908 the Board has asked \$31,641,326.75. The bulk of the large increase is due to a proposed increase in the salaries of many teachers. A woman teacher now enters the system at \$600 a year, and advances, with yearly increments of \$40, to \$1,240. In the upper grades the maximum salaries are \$1,320 and \$1,440. Under the proposed schedule the beginning salary will be \$720, the annual increment \$48, and the maximum \$1,440. This applies to the great majority of teachers in elementary schools. Men teachers in these schools now start at \$900 and go up to \$2,400. Men principals of elementary schools receive \$3,500, and women principals \$2,500. In high schools the salaries for women range from \$700 to \$2,500, and for men from \$900 to \$3,000. Principals of high schools are paid \$5,000, and \$5,000 is the salary of district superintendents and examiners. Associate superintendents receive \$6,500. The salary of the city superintendent is \$10,000. The number of elementary schools is 490—179 in Manhattan, 152 in Brooklyn, 43 in the Bronx, 82 in Queens, and 34 in Richmond. The number of high schools is fourteen, besides six high school departments in elementary school buildings in Queens. There are also three training schools for teachers and two truant schools. In the elementary schools there are 1,243 men and 12,766 women teachers; in high schools, 520 men and 556 women. In the evening schools (high and elementary) there are 1,186 men and 853 women teachers. Seventy-seven attendance officers enforce the Compulsory Education law. The latest available figures show the attendance as follows:

The Rhodes Scholarship at Oxford University.

CERIL RHODES, statesman, who died at Cape Town, South Africa, March 26, 1902, directed in his will dated July 1, 1899, that a part of his fortune, estimated at \$10,000,000, should be applied to the creation of a fund for the support of a certain number of scholarships covering a three-years course at the University of Oxford. He directed that the selection of the recipients of this gift should be made two from each State and Territory of the United States, or one hundred in all, fifteen from Germany and from one to nine from each of the British Colonies. The scholarships are awarded on marks only, three-tenths whereof shall be given to a candidate for his "Literary and Scholastic" attainments, the remainder being for his love of outdoor athletics and sports, for strong, manly qualities such as courage, generosity and kindness, and for high moral character, and especially for ambition to serve and lead in large public affairs.

The agencies for final selection vary a good deal. Scholars from Cape Colony are chosen by the individual schools to which the scholarships are especially assigned. In several of the Canadian provinces and in a few States of the American Union it has been decided that an appointment shall be made in rotation by the leading universities. Under this system the field of selection each year is somewhat narrowed, but it is possible to carry out more closely than otherwise the suggestions made by Mr. Rhodes, who appears to have had in his mind selection by a single institution. The five German students for whom annual provision is made are nominated, according to the terms of the will, by the Emperor himself. In the great majority of the States of the Union, in outlying colonies like Bermuda, Jamaica and Newfoundland, in four provinces of Canada, in New Zealand and the States of Australia, the final choice of the scholar is left in the hands of a Committee of Selection. Great care has been taken in the constitution of these committees, as it has been felt that on the wise and impartial exercise of their judgment depends more than upon anything else the full success of the scheme.

In most of the States the selection is made by a committee appointed by representatives of the colleges; in some the appointments are made in rotation by the leading colleges.

The conditions regulating the award of scholarships in the American States provide that the candidates shall have satisfactorily completed the work of at least two years in some college of liberal arts and sciences. Except under extraordinary circumstances the upper age limit must be twenty-four years at the time of entering upon the scholarship at Oxford. To be eligible the candidate must be a citizen of the United States, or the son of a citizen, and must be unmarried. Each student receives an allowance of £300 a year, which is equivalent to \$1,500, payable in quarterly instalments, which is just enough to enable him to pay his college fees and necessary expenses. As the first instalment is not available until sometime after the arrival of the student he should go abroad with one or two hundred dollars in his possession.

At the beginning of Michaelmas term, October, 1904, there entered Oxford seventy-two Rhodes scholars; forty-three were Americans, twenty-four colonials and five Germans. In 1906, the full number, 190 in all, were in residence, and thereafter this number will be maintained, the vacancies being filled as men complete their three-years' course. The next examination in the United States will take place in January, 1905. There will be examinations also in 1910, 1911, 1913, 1914, and so on, omitting every third year. The examinations are not competitive, but qualifying. Inquiries as to particulars by intending candidates may be addressed to any college. Information about Oxford, its colleges and course of studies, should be addressed to F. J. Wylie, the Oxford agent of the Rhodes trustees, Oxford, England.

UNITED CHAPTERS OF PHI BETA KAPPA.

The Phi Beta Kappa Society was founded at William and Mary College, Williamsburg, Va., December 5, 1776, and now consists of 71 chapters located in as many of the leading colleges and universities in the land. The total living membership is nearly 12,000. Until 1883 the growth of the Society was comparatively slow, but since the organization of the United Chapters the development has been rapid, 47 chapters having been organized. At the ninth triennial council, held September 12, 1907, at William and Mary College, eight chapters were granted, as follows: Virginia, Illinois, Louisiana, Illinois and Ohio Western Universities, and Oberlin, Iowa and Franklin and Marshall Colleges. Women were first admitted in 1875, and the first charter to a woman's college, Vassar, was granted in 1898. Since then Smith, Wellesley, Mt. Holyoke and the Woman's College of Baltimore have received charters. At the recent Council President Mary E. Woolley, of Mt. Holyoke, was chosen to the Senate, the first woman to be thus honored. The officers for the term, 1907-1910 are: *President*, Prof. Edwin A. Grosvenor, LL.D., Amherst, Mass.; *Vice-President*, Hon. John J. McCook, LL.D., New York, N. Y.; *Secretary and Treasurer*, Rev. Oscar M. Voorhees, A. M., High Bridge, N. J. For Professional Fraternities, see page 15.

\* The difference between the cheers of Harvard and Yale lies in the length of time it takes to give them. Harvard's cheer is long and deep; Yale's quick and sharp.

## New York Public Library, Astor, Lenox, and Tilden Foundations.

ESTABLISHED by consolidation of "The Trustees of the Astor Library," "The Trustees of the Lenox Library," and "The Tilden Trust," May 23, 1895, twenty-one Trustees being chosen from the Trustees of these corporations. The agreement of consolidation provided for the establishment and maintenance of a free public library and reading-room in the City of New York, with such branches as might be deemed advisable for the continued promotion of the objects and purposes of these several corporations.

The Trustees soon after the consolidation in 1895 determined to pursue a liberal policy and to create a great library system not only for the use of scholars, but for the people. The best permanent site for the future great library was considered to be in Bryant Park, on Fifth Avenue, between Fortieth and Forty-second Streets, on the site of the reservoir, which had become obsolete and was practically unused. On March 25, 1896, the Trustees made a formal address to the Mayor asking aid from the city in securing the site of the reservoir, and in May, 1896, the Legislature passed a law authorizing the removal of the reservoir and the lease of the land to the Library. On May 19, 1897, another act was passed providing for the construction by the city of a library building on the reservoir site, and for its lease to the Library, which act was amended in 1900, removing the limit of cost. On November 10 the architects were selected for the new building and on December 1 the plans were approved by the city. The style of architecture is Renaissance and the material used is white marble. The building fronts on Fifth Avenue, looking east. The greatest projection of the main facade of the building is seventy-five feet back of the Fifth Avenue building line. It is intended to make a terrace out of this seventy-five feet of foreground, serving as a grand approach to the main entrance. The terrace will be 455 feet long. There will be a hallway in the centre of the building eighty feet long and forty feet wide. The staircases which lead to the second and third floors will be of stone, twelve feet wide. The arches of the vestibule are thirty-five feet high and fifteen feet wide. The entrance to the stairs and the elevators will be found on the Fortieth Street side. The rooms for the circulation of books and the children's room will be on the basement floor, Forty-second Street side; on this floor will be also the rooms for newspapers, the binding and printing departments; the first floor will contain the offices of the business superintendent, superintendent of circulation, patents, and periodicals reading-rooms, and exhibition rooms; on the second floor will be the Trustees' room, the office of the Director, lecture and assembly rooms, cataloguing and accession departments, and various special reading-rooms; the third floor will contain the large general reading-rooms, the public catalogue, special reading-rooms for manuscripts, Americana, etc., the Stuart books and pictures, the print room, etc. There will be about 140 feet of ground between the west elevation of the building and the present park. The design of the building will be monumental in character, with classical proportions. After delays, owing to the inability of the city to appropriate funds for the work, the removal of the reservoir was begun on June 6, 1899. The entire building was under roof at the end of November, 1906.

On March 12, 1901, Mr. Andrew Carnegie offered to give \$5,200,000 to the city for the construction and equipment of free circulating libraries upon condition that the city should provide the land and agree to maintain the libraries when built. This communication was submitted to the Mayor on March 15, and on April 26 an act was passed authorizing acceptance of the gift by the city upon the terms imposed by Mr. Carnegie. An agreement with the city was executed on July 17, the Library acting as agent for Mr. Carnegie, under which forty-two buildings are to be erected in Manhattan, the Bronx, and Richmond (later increased to fifty), on sites to be selected and purchased by the city with the approval of the Library, the buildings to be leased to the Library and to be under its control. The city agrees to provide adequate yearly maintenance, 10 per cent, of the cost of each building being agreed upon as a minimum.

On November 7, 1901, an agreement was made with three firms of architects in New York to prepare plans and specifications for these branch libraries. On June 6, 1902, an issue of bonds for \$250,000 was authorized for purchase of sites. The first Carnegie building, known as the Yorkville branch, was opened December 13, 1902, at 222 East Seventy-ninth Street; the second, providing a new home for the Chatham Square branch, was opened November 2, 1903, at 31 East Broadway. Twenty-nine other sites have been acquired under the contract, and building operations are under way. The Trustees of the Library are:

## Smithsonian Institution.

FOR THE INCREASE AND DIFFUSION OF KNOWLEDGE AMONG MEN.

OFFICERS OF THE SMITHSONIAN INSTITUTION.

*Ex-Officio Presiding Officer of the Institution*, Theodore Roosevelt, President of the United States; *Chancellor of the Institution*, Melville W. Fuller, Chief Justice of the United States; *Secretary of the Institution*, Charles D. Walcott; *Assistant Secretary in Charge of United States National Museum*, Richard Rathbun; *Assistant Secretary in Charge of Library and Exchanges*, Cyrus Adler.

*Board of Regents*, Melville W. Fuller, Chief Justice of the United States, Chancellor; Charles W. Fairbanks, Vice-President of the United States; Shelby M. Cullom, Member of the Senate; Henry Cabot Lodge, Member of the Senate; A. O. Bacon, Member of the Senate; John Daizell, Member of the House of Representatives; James R. Mann, Member of the House of Representatives; William M. Howard, Member of the House of Representatives; James B. Angell, citizen of Michigan; Andrew D. White, citizen of New York; John B. Henderson, citizen of Washington, D. C.; Alexander Graham Bell, citizen of Washington, D. C.; Richard Olney, citizen of Massachusetts; George Gray, citizen of Delaware.

The Institution at Washington, D. C., was established by statute in 1846, under the terms of the will of James Smithson, who bequeathed his fortune in 1826 to the United States for the "increase and diffusion of knowledge among men." From the income of the fund a building, known as the Smithsonian Building, was erected on land given by the United States. The Institution is legally an establishment having as its members the President of the United States, the Vice-President, the Chief Justice, and the President's Cabinet. It is governed by a Board of Regents consisting of the Vice-President, the Chief Justice, three members of the United States Senate, three members of the House of Representatives, and six citizens of the United States appointed by joint resolution of Congress. It is under the immediate direction of the Secretary of the Smithsonian Institution, who is the executive officer of the Board and the director of the Institution's activities.

For the increase of knowledge, the Institution aids investigators by making grants for research and exploration, supplying books, apparatus, laboratory accommodations, etc. It occasionally provides for lectures, which are published. It has initiated numerous scientific projects of national importance, some of which have been turned over to the Government and resulted in the creation of independent Government bureaus. It advises the Government in many matters of scientific importance, especially in those that have an international aspect. It co-operates with scientific bodies of national importance, like the National Academy of Sciences, the American Association for the Advancement of Science, the American Historical Association, etc. It issues three regular series of publications: Annual Reports, containing papers of general interest intended to keep the ordinary reader abreast of the progress of science; Contributions to Knowledge, the distinct feature of which is that each memoir constitutes an original contribution to knowledge; Miscellaneous Collections, which contain bibliographies, reports of expeditions, standard tables, and a scientific quarterly. All these publications are distributed gratuitously to important libraries throughout the world.

### THE INSTITUTION LIBRARY.

The Institution maintains a library in co-operation with the Library of Congress, which numbers 250,000 volumes, and consists mainly of the transactions of learned societies and scientific periodicals. While the body of the library is deposited in the Library of Congress and accessible to all its readers, a working library is maintained at the Institution. Lists, bibliographies, rules for cataloguing and library work have been published. It supports a table at the Biological Station at Naples. All these and numerous other activities may be carried on solely from the income of the Smithsonian fund. The Regents are empowered to accept gifts without action of Congress, in furtherance of the purposes of the Institution, and to administer trusts in accord therewith.

The parent Institution has the administrative charge of several branches which grew out of its early activities and which are supported by Congressional appropriations. These are the National Museum, including the National Gallery of Art; the International Exchange Service, the Bureau of American Ethnology, the National Zoological Park, the Astrophysical Observatory, and the Regional Bureau for the International Catalogue of Scientific Literature.

THE UNITED STATES NATIONAL MUSEUM is the depository of the national collections. It is especially rich in the natural history, geology, paleontology, archaeology and ethnology of America, and has unique collections of American history, as well as many series relating to fine arts and the industrial arts. It is both an educational and a research museum, and issues numerous technical and popular scientific publications. The National Gallery of Art consists largely of the collections of etchings and engravings of George P. Marsh, the collections of Charles L. Freer, containing numerous paintings and etchings by Whistler, and examples of Chinese and Japanese art; the Harriet Lane Johnston collection, including a number of the greatest English portrait painters, and the collection of William T. Evans, of fifty paintings, representing some of the best work of American artists.

THE INTERNATIONAL EXCHANGES, carried on in accordance with the terms of a treaty entered into between the United States and various foreign nations, is for the free interchange of Governmental and scientific publications between the Government of the United States and foreign governments and institutions, and investigators in the United States and foreign lands. At present it has 56,314 correspondents, and since its establishment over 2,750,000 packages have been handled by it.

The Bureau of American Ethnology, a study of the North American Indian, the Astrophysical Observatory for the investigation of solar phenomena, the National Zoological Park at Washington, and the Regional Bureau for the collection and classification of the natural and physical sciences, are also departments of the work of the Institution.

A very large number—more than 18,000,000—of Hindoos, Mohammedans, Buddhists, and others in the East also speak and read English.

The estimates in the last table were from Whitaker's (London) Almanack.

The "Encyclopedia Britannica," last edition, makes a rough estimate of numbers of Protestants in the world speaking all civilized languages, and places the Lutherans at the head, with over 42,000,000 members (mostly in Germany and Scandinavia), and the Anglican Church second, with about 20,000,000 members. \*The American Jewish Year Book for 1907 estimated the number of Jews in the United States at 1,777,185 and in the world at 11,585,202 in 1907.

## American Unitarian Association.

THIS Association was organized in Boston, Mass., May 25, 1825, and incorporated in 1847. Its objects, as defined in the report of the Committee on Organization, are as follows:

1. To collect and diffuse information respecting the state of Unitarian Christianity in our country.
2. To produce union, sympathy, and co-operation among liberal Christians.
3. To publish and distribute books and tracts, inculcating correct views of religion, in such form and at such price as shall afford all an opportunity of being acquainted with Christian truth.
4. To supply missionaries, especially in such parts of our country as are destitute of a stated ministry.
5. To adopt whatever other measures may hereafter seem expedient—such as contributions in behalf of clergymen with insufficient salaries, or in aid of building churches.

*President*—Rev. Sam'l A. Elliot, D. D., Boston, Mass. *Secretary*—Rev. Lewis G. Wilson, Boston, Mass.

### National Woman's Christian Temperance Union.

The following statement of the purposes of the society was prepared for THE WORLD ALMANAC by an officer of the Union:

The National W. C. T. U. was organized in Cleveland, Ohio, in 1874, and is the sober second thought of the great woman's crusade. It is now regularly organized in every State of the Union.

There are about 10,000 local unions, with a membership and following, including the children's societies, of about half a million. The W. C. T. U. has forty distinct departments of work, presided over by as many women experts, in the National Society, and in nearly every State. All the States in the Republic have laws requiring the study of scientific temperance in the public schools, and all these laws were secured by the W. C. T. U., also the laws forbidding the sale of tobacco to minors. The first police matrons and most industrial homes for girls were secured through the efforts of this society, as were the refuges for erring women. Laws raising the age of consent and providing for better protection for women and girls have been enacted by many Legislatures through the influence of the Union.

The World's W. C. T. U. was founded through the influence of Frances E. Willard in 1883, and already has auxiliaries in more than fifty countries and provinces. The white ribbon is the badge of all the W. C. T. U. members, and is now a familiar emblem in every civilized country.

The headquarters of the National organization is The Willard, Rest Cottage, Evanston, Ill. The following are the officers: *President*, Mrs. Lillian M. N. Stevens, Portland, Me.; *Vice-President-at-Large*, Miss Anna A. Gordon, Evanston, Ill.; *Corresponding Secretary*, Mrs. Susanna M. D. Fry, Evanston, Ill.; *Recording Secretary*, Mrs. Elizabeth Preston Anderson, Valley City, N. D.; *Assistant Recording Secretary*, Mrs. Sara H. Hoge, Lincoln, Va.; *Treasurer*, Mrs. Harriett W. Brand, Evanston, Ill.

### Church Temperance Society.

**GENERAL OFFICERS.**—*President*, Rt. Rev. Daniel Sylvester Tuttle, S. T. D., Bishop of Missouri; *Vice-Presidents*, sixty Bishops of the Protestant Episcopal Church; *Chairman*, Rt. Rev. Frederick Courtney D. D.; *Vice-Chairman*, Rev. D. Parker Morgan, D. D., of New York; *Treasurer*, Irving Grinnell; *General Secretary*, Robert Graham. The Society was organized within the Protestant Episcopal Church in 1881. Its adult membership combines those who temperately use and those who totally abstain from intoxicating liquors as beverages. It works on the lines of moral as well as of legal suasion, and its practical objects are: 1. Training the young in habits of temperance. 2. Rescue of the drunkard. 3. Restriction of the saloon by legislation. 4. Counteractive agencies, such as iced water fountains, lunch wagons, coachmen's and firemen's coffee vans, coffee-houses, workmen's clubs, reading-rooms, and other attractive, wholesome resorts. The Church Temperance Legion (comprising the Knights of Temperance, Young Crusaders, and Veteran Knights) deals with boys, seeking to induce them to keep sober, pure, and reverent from the earliest years of manhood, and it endeavors to perpetuate those habits in men. Headquarters, the Church Mission House, New York.

### Society of St. Vincent de Paul.

THIS great Roman Catholic organization, founded in Paris, France, in which its head office is located, has branches in every part of the civilized world. Its principal mission is the care of the poor in their homes to the end that the unity of the family may be preserved, but it conducts many other works of charity, such as free employment bureaus, Summer homes, boys' clubs, hospital and prison visitation committees, etc.

The local or parish branches of the Society are known as conferences; these conferences are grouped in sections under the jurisdiction of Particular and Central Councils, and the latter, in the United States, are under the jurisdiction of three Superior Councils. The office of the Superior Council of New York is located at No. 375 Lafayette Street, New York City. New Orleans, La., and St. Louis, Mo., also have Superior Councils.

The officers of the Superior Council are as follows: *Spiritual Director*, The Rev. Denis J. McMahon, D. D.; *President*, Thomas M. Mulry; *Secretary*, Edmond J. Butler; *Treasurer*, Michael J. Scanlan.

### Christian and Missionary Alliance.

**OFFICERS.**—*President and General Superintendent*, Rev. A. B. Simpson, 692 Eighth Avenue, New York City; *Secretary*, A. E. Funk; *Treasurer*, David Crear.

The Christian Alliance was founded in 1887. It combined with the International Missionary Alliance in 1897, and the present title was adopted. Membership consists of all professing Christians who shall subscribe to the principles of the order and enroll their names. The objects of the Alliance are stated to be "Wide diffusion of the Gospel in its fulness, the promotion of a deeper and higher Christian life, and the work of evangelization, especially among the neglected classes in distant and especially in heathen countries." Its income in 1906-7 was over a quarter of a million dollars. State auxiliary and local branches are being rapidly formed. Connected with the Alliance are the Missionary Training Institute, Institute for the Training of Home Workers, Berachah Home. The headquarters of the Alliance are at 690 and 692 Eighth Avenue, New York City.

### The Young People's Christian Union.

THE Young People's Christian Union of the Church of the United Brethren in Christ was organized June 5, 1890. It is a union of all forms of young people's societies within the Church, uniting them for the purpose of denominational direction. There are now 2,068 societies, of which 556 are junior societies. The total membership is 82,468. A mission church has been built in Los Angeles, Cal. Each conference is called a Branch and holds its annual conventions, when a review of the year's work is made and new plans are laid. At present there are about forty Branches or Districts, and nearly every one is doing something special in missions, either at home or abroad. The General Union holds its convention every two years, the next convention being at Indianapolis in June, 1908. *The Watchword* is the organ of the Union. Single subscription, \$1.00; club rates, 75 cents. Its circulation is nearly 40,000. H. F. Shupe, D. D., Dayton, Ohio, is editor. Last year, 1907, \$1,600 were raised for inaugurating missionary work among the aliens in America. The Junior work is one of the strong departments, superintended by Mrs. G. W. Kitzmiller, Dayton, Ohio. Rev. E. S. Bowman, Harrisburg, Pa., is superintendent of Bible study, Mahlon Miller and C. J. Roberts are superintendents of missions; Rev. J. S. Kendall, Cleveland, Ohio, is superintendent of Christian Stewardship. The principal officers are: *President*, Rev. J. G. Huber, D. D., Dayton, Ohio; *Corresponding Secretary*, H. F. Shupe, Dayton, Ohio; *Treasurer*, E. Jay Rogers, Dayton, Ohio.

### Young Men's Christian Associations.

**OFFICERS OF THE INTERNATIONAL COMMITTEE.**—Office, No. 3 West Twenty-ninth Street, New York. *Chairman*, Lucien C. Warner; *Treasurer*, Frederick B. Schenck; *General Secretary*, Richard C. Morse. *Board of Trustees—Treasurer*, Jas. G. Cannon, New York City. The International Committee is the general executive of the Associations of North America. It consists of 55 representative Christian laymen, and employs a force of 56 secretaries in the home and 70 in the foreign fields.

**OFFICERS OF THE WORLD'S COMMITTEE.**—Headquarters, No. 3 Général Dufour, Geneva, Switzerland. *Chairman*, R. Sarasin Warnery; *Secretary*, Louis Perrot; *Treasurer*, Paul Des Gouttes; *General Secretaries*, Charles Fermaud and Christian Philidius. The committee is composed of members representing America, Australasia, Austria-Hungary, Belgium, Denmark, Great Britain, France, Germany, Italy, Netherlands, Norway, Portugal, Russia, Spain, South Africa, Sweden, Switzerland, Japan, and India.

**OFFICERS OF THE STATE EXECUTIVE COMMITTEE OF THE YOUNG MEN'S CHRISTIAN ASSOCIATIONS OF THE STATE OF NEW YORK.**—General office, No. 215 West 23d Street, New York. *Chairman*, Edmund P. Platt; *Treasurer*, Samuel Woolverton; *State Secretary*, John W. Cook. This committee was incorporated under the laws of New York April 14, 1886, having for its object "the establishing and assisting Young Men's Christian Associations, and generally to provide for the spiritual, intellectual, physical, and social well-being of young men in accordance with the aims and methods of Young Men's Christian Associations of the State of New York." The membership in the State is 56,126, divided as follows: General, 31,161, Railroad, 11,485; Student, 3,239; Boys' Departments, 8,568; County and small town, 720. A biennial meeting of the State Association, comprising the 187 Associations in the State, is held in February, the even years.

**OFFICERS OF THE YOUNG MEN'S CHRISTIAN ASSOCIATION OF THE CITY OF NEW YORK.**—General office, No. 156 Fifth Avenue, New York. *President*, W. Fellowes Morgan; *Treasurer*, Samuel Sloan, Jr.; *General Secretary*, Henry M. Orme.

There are 7,771 associations in the world, of which 1,952 are in North America. The total membership of these American associations is 437,178; they occupy 589 buildings of their own, valued at \$34,132,245, and have 654 libraries, containing 555,320 volumes. They have 42,129 young men as students in evening educational classes, and 134,963 in their physical departments. They employ 2,392 general secretaries and other paid officials, and expended last year for current expenses—local, State, and international—\$6,080,729.

### The World's Young Women's Christian Association.

The World's Young Women's Christian Association was formed in 1894. Eleven National Associations are now affiliated: Great Britain, United States, Canada, Germany, Italy, France, Norway, Sweden, India, Denmark, and Hungary. The headquarters are in London. Office, 26 George Street, Hanover Square, West. The Executive Committee is composed of a resident membership in London and two representatives from America and other countries. Mrs. George W. Campbell is Chairman, Miss Clarissa Spencer, General Secretary. The second World's Conference was held in Geneva, Switzerland, July, 1902.

The American Committee was formed in 1886. General office, 917 Hartford Building, 140 Dearborn Street, Chicago, Ill.; Eastern office, Room 60, 2-9 Fourth Avenue, New York City. There are now associations affiliated with the American Committee in 552 colleges and 104 cities, with 24 State organizations. Each State holds an annual convention. The national convention occurs biennially. Each year seven conferences are held to train volunteer workers in Bible study and association work. These meet at Capitola, Cal.; Asheville, N. C.; Lake George, N. Y.; Lake Geneva, Wis.; Waterloo, Iowa; Lakeside, Iowa, and Seaside, Oregon. A training institute is conducted to prepare young women for positions as secretaries. *The Evangel*, the official organ of the association, is published monthly at Chicago. America joins with the World's Association in observing the second week in November as a week of prayer for young women. The Student Department of the American Committee is one of the members of the World's Student Christian Federation, and the Student Volunteer Movement for Foreign Missions is also connected directly with the Student Department. Mrs. J. S. Griffith is Chairman, Miss Mabel Cratty is General Secretary of the American Committee. Membership of local associations connected with the American Committee, 100,252.

### American Tract Society.

This Society was founded in 1825. For eighty-two years it has published and circulated, by sale or grant, books, tracts, and periodicals, representing the best Christian literature approved by all Evangelical Christians, and is the almoner of their gifts to the destitute. Its total issues at home, in thirty-four languages, number over 754,957,006 copies. It has helped Foreign Missions, in one hundred and forty-four languages, dialects or characters, to many millions of copies; in value, \$768,713.25. Its colporteurs have visited over 16,296,233 families, and circulated over 16,723,724 volumes. The Society is dependent upon donations and legacies for its support. Offices, 150 Nassau Street, New York. *President*, William Phillips Hall, Esq.; *Secretaries*, George L. Shearer, D. D., John H. Kerr, D. D., and Frederic H. Andrews.

### American Bible Society.

The American Bible Society was founded in 1816. It is a charitable institution, whose sole object is to encourage a wider circulation of the Scriptures without note or comment. It invites the contribution and co-operation of "all who accept the Bible as their rule of life and believe that every human being is entitled to know what it teaches concerning truth and duty." The officers are a president, Daniel C. Gilman, Baltimore, Md., and twenty-six vice-presidents, headed by J. L. Chamberlain, Maine. Among the others are Gen. O. O. Howard, Vermont; Frank E. Spooner, Illinois; Frank M. Cockrell, Missouri; John W. Foster, District of Columbia; T. A. Brouwer, New York; Cyrus Northrop, Minnesota; James H. Carlisle, South Carolina; Howard Van Epps, Georgia; E. E. Beard, Tennessee; William J. Northen, Georgia; William A. Robinson, Kentucky; John B. Smith, New Hampshire; W. P. Dillingham, Vermont; David J. Brewer, District of Columbia; James A. Beaver, Pennsylvania; Elbert A. Brunkerhoff, New Jersey; and John L. Williams, Virginia. There are thirty-six managers, divided into four classes as to terms of office. The Secretaries are: Rev. John Fox, D. D., Rev. W. I. Haven, D. D., and Rev. H. O. Dwight, LL. D. The Treasurer is William Foulke. The issues for the year ending March 31, 1907, were 1,910,853 copies, and for the ninety-one years of the existence of the Society, 80,420,382 copies. This includes Bibles in many foreign tongues, and the languages of several American Indian tribes. (The British and Foreign Bible Society, established in 1804, has distributed to March 31, 1907, 203,931,768 copies.) The offices of the Society are at the Bible House, Fourth Avenue, New York.

### Young People's Society of Christian Endeavor.

OFFICERS OF THE UNITED SOCIETY OF CHRISTIAN ENDEAVOR.—Office, Tremont Temple, Boston, Mass. *President*, Rev. Francis E. Clark, D.D., LL.D.; *Treasurer*, Hiram N. Lathrop; *General Secretary*, William Shaw.

Each society is in some local church, and in no sense outside. It exists simply to make the young people loyal and efficient members of the Church of Christ. It is the Church training the young. Its motto is, "For Christ and the Church." In November, 1907, there were 69,236 societies, with a membership of 3,462,800, chiefly in the United States and Canada, and in Australia, Great Britain, China, India, Japan, and in all missionary lands. It is found in about the same proportions in all the great evangelical denominations and in all their subdivisions.

The United Society is simply the bureau of information for all the societies. It prints the literature, supports one general secretary, and is the general headquarters of the work. It levies no taxes, however, and assumes no authority, but every society manages its own affairs in its own way. It is supported by the sales of its literature, badges, etc. It is managed by a board of trustees, representing the great evangelical denominations, the President being Francis E. Clark, D.D., LL.D., the founder of the society; *General Secretary*, William Shaw; *Treasurer*, Hiram N. Lathrop. The executive committee of the board of trustees meets quarterly to consult concerning the best interests of the society.

### American Board of Commissioners for Foreign Missions.

THE head office is at the American Board of Commissioners for Foreign Missions is at the Congregational House, 14 Beacon Street, Boston, Mass. There are three district offices: (1) at the United Charities Building, Twenty-second Street and Fourth Avenue, New York City, Rev. C. C. Creegan, D.D., District Secretary; (2) 153 La Salle Street, Chicago, Ill., Rev. A. N. Hitchcock, Ph. D., District Secretary; (3) Berkeley, California, Barker Block, Rev. H. M. Tenney, District Secretary. Its officers are: *President*, Samuel B. Capen, LL.D., Boston, Mass.; *Vice-President*, Henry C. King, D.D., Oberlin, O.; *Corresponding Secretaries*, James L. Barton, D.D., Cornelius H. Patton, D.D., *Treasurer*, Frank H. Wiggen; *Editorial Secretaries*, E. B. Strong, D.D., Rev. William E. Strong; *Associate Secretary*, Harry Wade Hicks; *Recording Secretary*, Henry A. Stinson, D.D.; *Prudential Committee*, Prof. Edward G. Moore, D.D., Hon. Arthur H. Wellman, Francis O. Winslow, Prof. Arthur L. Gillett, D.D., Col. Charles A. Hopkins, Herbert A. Wilder, Rev. Edward M. Noyes, Rev. John H. Demson, Rev. Albert P. Fitch, Henry H. Proctor, Rev. Geo. A. Hall; *Publishing and Purchasing Agent*, John G. Hosmer.

The American Board, which is the oldest foreign missionary society in the United States, was organized June 29, 1810. During the past ninety-seven years of its history it has sent out 2,500 missionaries, of whom 509 are now in service. Into the 600 churches which have been organized by these missionaries there have been received from the first nearly 200,000 members. The total receipts from the beginning have been over \$37,000,000.

The mission fields now occupied by the Board are: Mexico; Micronesia Islands; Philippine Islands; Japan; North China; Shansi, in Northwestern China; Foochow and Hong Kong, in Southern China; Ceylon; Madura, in Southern India; the Marathi field of Western India; East Central Africa; Southern Africa; West Central Africa; European and Asiatic Turkey; Austria, and Spain.

### United Society of Free Baptist Young People.

A GENERAL society representing the local societies of young people of the Free Baptist Denomination. The officers are as follows: *President*, E. P. Metcalf, Providence, R. I.; *Vice-President*, Rev. J. H. Wolfe, Tecumseh, Neb.; *Recording Secretary*, Miss Agnes Collins, South Danville, N. H.; *General Secretary*, Harry S. Myers, Hillsdale, Mich.; *Treasurer*, Rev. Arthur Given, D.D., Providence, R. I. There are 400 societies, with a membership of 15,000.

### Baptist Young People's Union of America.

THE Union represents young people's societies connected with Baptist churches in all the States and Canada. The following are the international officers: *President*, John H. Chapman, Chicago, Ill.; *Vice-Presidents*, George Miller, Baltimore, Md., Principal A. L. McCrimmon, M. A., Woodstock, Ont.; George W. Truett, D. D., Dallas, Tex.; *Field Secretary*, George T. Webb, 324 Dearborn Street, Chicago, Ill.; *Recording Secretary*, Rev. H. W. Reel, Ph. D., Rock Island, Ill.; *Treasurer*, H. B. Osgood, Chicago, Ill.; H. C. Lyman, *Manager*. The Union was organized July 7 and 8, 1891. It holds annual meetings. Next meeting will be held at Spokane, Wash., July, 1907.

### The Brotherhood of St. Andrew.

THE following was prepared for THE WORLD ALMANAC by the General Secretary:

"The Brotherhood of St. Andrew is an organization of men in the Protestant Episcopal Church. Its sole object is the spread of Christ's kingdom among men. It works under two rules, known as (1) The Rule of Prayer: 'To pray daily for the spread of Christ's kingdom among men, especially young men, and for God's blessing upon the labors of the Brotherhood, and (2) The Rule of Service: 'To make at least one earnest effort each week to lead some man nearer to Christ through His church.' There are now 1,500 active chapters with a membership of about fifteen thousand men.

The Brotherhood idea has also taken root in Canada, and the Brotherhood of St. Andrew in the Church of England in the Dominion of Canada has been formed, with four hundred chapters and thirty-eight hundred men. A similar organization has been formed in the Scottish Episcopal Church. In the West Indies there is a membership of 1,000 men, and there is also a national organization in Japan. June 12, 1896, the Brotherhood of St. Andrew in the Church of England was formed.

The Brotherhood in the United States includes a Junior Department to train young men and elder boys for Christian work. It has 500 chapters in the United States, with about six thousand members. The officers are: *President*, Robert H. Gardiner; *Editor of St. Andrew's Cross and General Secretary*, Hubert Carleton, Broad Exchange Building, Boston, Mass.; *Associate Secretary*, George H. Randall. The Secretaries will furnish information and literature to any one who may be interested in the work.

### The Brotherhood of Andrew and Philip.

THIS organization, founded in 1888, held its first federal convention in the City of New York in 1893. It is composed of members of twenty-three evangelical denominations—the Reformed Church in America, the Reformed Church in the United States, the Congregational, Presbyterian (North, South, Canadian, and United), Methodist Episcopal, Methodist Protestant, Baptist, United Brethren, Lutheran, Reformed Episcopal, Church of Christ, Progressive Brethren, Friends, United Evangelical, Free Baptist, Federal, African Methodist Episcopal and Evangelical Association. It has chapters in Australia and Japan. Its objects are embodied in the statement that "Any man can belong to the Brotherhood who will promise to pray daily for the spread of the kingdom of Christ among men, and to make an earnest effort each week to bring at least one man within the hearing of the Gospel." The number of chapters of the Brotherhood in the United States is 875, and the membership 25,000 in 44 States. The Rev. Dr. Rufus W. Miller, the founder, 1308 Arch Street, Philadelphia, Pa., is President of the Federal Council, and Rev. J. G. Hamner, Jr., 189 Garside Street, Newark, N. J., General Secretary.

### The Daughters of the King.

THE Order of the Daughters of the King was organized on Easter Evening, 1885. It is desired by its promoters that a careful distinction shall be made between the Daughters of the King and The King's Daughters. This is the older society, and differs from The King's Daughters in many important particulars. In the first place, it is more of an order than a society, and is distinctively Episcopal. Its work is definite, and is "for the spread of Christ's kingdom among young women," and the "active support of the rector's plans in the parish in which the particular chapter may be located." Its badge is a cross of silver, a Greek cross fleury, and its mottoes are "Magnanimum Crucem Sustine" and "For His Sake." Its colors are white and blue—white, the old royal color of Israel, and blue, the color of the Virgin Mary, the "blessed daughter of Israel's King, the Mother of the King of Kings." Its constitution is framed, as far as is possible, in the terms of that of the Brotherhood of St. Andrew, the work of the two organizations being similar. The officers of the Council are: *President*, Mrs. E. A. Bradley; *General Secretary*, Miss Elizabeth L. Ryerson. Office of the Council, Church Missions House, 281 Fourth Avenue, New York.

### International Order of The King's Daughters and Sons.

HEADQUARTERS, 156 5th Ave., New York City. Officers: *President*, Miss Kate Bond; *Vice-President*, Mrs. Robert J. Reed; *Secretary and Treasurer*, Mrs. Mary Lowe Dickinson.

The Order is an interdenominational, religious and philanthropic society, working locally in Circles, County and City Unions, Chapters, State and National organizations. Branches are established in thirty-one States, and in eight Canadian provinces.

The objects of the Order are "the development of spiritual life and the stimulation of Christian activities." Its membership is very large and extends all over the world. The Order has established or supported several hundred institutions of different kinds in different localities. The badge is a small silver cross, which is also the corporate seal of the society.

### Luther League of America.

*President*—William C. Stoeber, Philadelphia, Pa. *General Secretary*—Luther M. Kuhns, Omaha, Neb. *Chairman National Executive Committee*, Mr. E. F. Eilert, New York.

The first National Convention of the Luther League of America was held at Pittsburgh, Pa., October 30 and 31, 1895. The League is a Lutheran organization, linking together the Lutheran young people who are laboring for the good of the Church by means of many individual societies of various names and styles of organization, each within its own immediate church. The constitution declares that its objects shall be "to encourage the formation of the young people's societies in all Lutheran congregations in America, to urge their affiliation with their respective State or Territorial leagues, and with this league to stimulate the various young people's societies to greater Christian activity and to foster the spirit of loyalty to the Church." The fundamental principles are federation and co-operation. The aggregate enrolled membership of the various local organizations represented in the national organization is over 100,000. These are comprised in twenty-five States, fourteen of which already have permanent State organizations. The first local organization adopting the title of "The Luther League" was organized by delegates of six Lutheran Church societies in the City of New York, April 19, 1888.

### The Epworth League.

OFFICERS OF THE EPWORTH LEAGUE OF THE METHODIST EPISCOPAL CHURCH.—*President*—Bishop Joseph F. Berry, Buffalo, N. Y. *General Secretary*—Edwin M. Randall, D.D., 57 Washington Street, Chicago, Ill. *Treasurer*—R. S. Copeland, M. D., Ann Arbor, Mich. The Central Office of the Epworth League is located at 57 Washington Street, Chicago, Ill.

The Epworth League was organized at Cleveland, Ohio, May, 1889, by the union of five societies then existing in the Methodist Episcopal Church. These several societies held under their jurisdiction 1,500 local societies, with a membership of about 6,000. It spread rapidly throughout the denomination until it is now organized in nearly every church, and has become the largest denominational society of young people in the world. Its official organ, *The Epworth Herald*, has a circulation of 130,000.

OFFICERS OF THE EPWORTH LEAGUE OF THE METHODIST EPISCOPAL CHURCH, SOUTH.—*President*—Bishop W. A. Candler, D.D., LL.D. *General Secretary*—Rev. H. M. Du Bose, D.D. *Assistant Secretary and Treasurer*—Rev. F. S. Parker, D.D., Nashville, Tenn. The general organ of the League is the *Epworth Era*, published weekly by the book agents of the Methodist Episcopal Church, South, Nashville, Tenn., and Dallas, Texas; H. M. Du Bose, Editor; F. S. Parker, Assistant Editor. The League in the Methodist Episcopal Church, South, was provided for by the General Conference of 1890, and in January of the following year its organization was effected. It came under the supervision of the Sunday-School Board. The General Conference of 1894 created it a separate connectional board and elected a General Secretary. It has now 3,569 chapters, with a total membership of 123,325.

## The Federal Council of the Churches of Christ IN AMERICA.

FIVE hundred officially appointed delegates of thirty denominations at Carnegie Hall, New York City, met in November, 1905, and adopted the following Plan of Federation:

I. For the prosecution of work which can be better done in union than separately, a Council is hereby established, to be known as the Federal Council of the Churches of Christ in America.

II. The following Christian bodies are represented in this Federal Council: Baptist Churches (North), Free Baptist Churches, Negro Baptist Churches, Christian Connection, Congregational Churches, Disciples of Christ, Evangelical Association, Evangelical Synod, Friends, Evangelical Lutheran Church, General Synod, Methodist Episcopal Church, Methodist Episcopal Church (South), Primitive Methodist Church, Colored Methodist Episcopal Church of America, Methodist Protestant Church, African Methodist Episcopal Church, African Methodist Episcopal Zion Church, Mennonite Church, Moravian Church, Presbyterian Church in the U. S. A., Cumberland Presbyterian Church, Welsh Presbyterian Church, Reformed Presbyterian Church, United Presbyterian Church, Protestant Episcopal Church, Reformed Church in America, Reformed Church in the U. S. A., Reformed Episcopal Church, Seventh Day Baptist Churches, United Brethren in Christ, United Evangelical Church.

III. The object of this Federal Council is: (1) To express the fellowship and catholic unity of the Christian Church. (2) To bring the Christian bodies of America into united service for Christ and the world. (3) To encourage devotional fellowship and mutual counsel concerning the spiritual life and religious activities of the Churches. (4) To secure a larger combined influence for the Churches of Christ in all matters affecting the moral and social condition of the people, so as to promote the application of the law of Christ in every relation of human life. (5) To assist in the organization of local branches of the Federal Council to promote its aims in their communities.

IV. This Federal Council has no authority over the constituent bodies adhering to it; but its province is limited to the expression of its counsel and the recommending of a course of action in matters of common interest to the churches, local councils and individual Christians. It has no authority to draw up a common creed, or form of government or of worship, or in any way to limit the full autonomy of the Christian bodies adhering to it.

Each Christian body adhering to this council may appoint four members, and one for each additional 50,000 communicants.

By the official action of denominational Assemblies and Conferences the Plan of Federation is now operative, and arrangements are being made for the Council to be held in December, 1908. The officers of the Executive Committee are: *Chairman*, William H. Roberts, D. D. *Secretary*, E. B. Sanford, D. D. Office, 81 Bible House, New York.

### Religious Education Association.

THE Religious Education Association was organized on February 12, 1903, at the close of a three days' convention held in Chicago, called to consider the improvement of moral and religious education.

Its service is fourfold: Arousing the public mind to a sense of the need of religious education, and knowledge of the right methods therein; uniting the forces for religious education; promoting investigation in religious education; providing a forum and a clearing-house for religious education. It now enrolls over 2,000 members, including laymen, college presidents and professors, pastors, teachers and parents, interested in the problem of reverent, scientific, effective character training. It holds great conventions and smaller conferences, publishes annual volumes and a journal, and renders service to thousands of churches, Sunday-schools, colleges and individuals. It knows no sectarian lines. It has no theological platform. It invites to membership all who sympathize with its purpose.

The officers are: *President*, Henry Churchill King, Oberlin, Ohio; *First Vice-President*, George Hodges, Cambridge, Mass.; *Chairman Executive Board*, William Douglas Mackenzie, Hartford, Ct.; *Vice-Chairman Executive Board*, Loring Wilbur Messer, Chicago, Ill.; *Treasurer*, James Herron Eckels, Chicago, Ill.; *Recording Secretary*, William Pierson Merrill, Chicago, Ill.; *General Secretary*, Henry Frederick Cope, 153 La Salle Street, Chicago, Ill.

### Brotherhood of the Red Diamond.

BROTHERHOOD of the Red Diamond (organized 1898). Organizations for boys in churches, twelve to fifteen years; inter-denominational. National headquarters, No. 287 4th Avenue, corner 22d Street, New York City. William Albert Whiting, General Superintendent.

### National Purity Federation.

THE following statement is contributed to THE WORLD ALMANAC by B. S. Steadwell, president of the Federation:

The object of this Federation is to unite in national co-operation all those forces in America that are striving to promote purity in the life of the individual and in social relations through preventive, educational, reformatory, rescue, law enforcement, legislative and sanitary lines of effort. It is in every sense non-sectarian, and is open to all who are sincerely and seriously striving to promote its object. Many of the leaders in religious, philanthropic and reform movements in the United States are officially connected with this Federation. Each year a largely attended national purity congress is held under the auspices of the Federation.

The officers are: *President*, B. S. Steadwell, La Crosse, Wis.; *First Vice-President*, Dr. Howard A. Kelly, Baltimore, Md.; *Second Vice-President*, Rev. Sylvanus Stall, Philadelphia, Pa.; *Recording Secretary*, Mrs. Rose Woodallen Chapman, Brooklyn, N. Y.; *Corresponding Secretary*, Hattie Dickson, Marshalltown, Iowa; *Treasurer*, Dr. Carolyn E. Geisel, Battle Creek, Mich.

### Christian Science.

THE Christian Science Publication Committee, for the State of New York, contributes the following statement:

In June, 1906, the \$2,000,000 extension of the Mother Church, the First Church of Christ Scientist, in Boston, was dedicated. At the annual meeting, June, 1907, an increase of 4,000 members over the previous year was reported. The total membership, resident and non-resident, was given at 43,876. In the *Christian Science Journal* Directory for 1907, over 1,000 churches and societies of this denomination were listed. The estimated membership of these branch churches is approximately 40,000. There are many institutes for teaching Christian Science, and upward of 4,000 practitioners of Christian Science mind-healing. Organizations can now be found in almost every city in the United States, and there are branches in Canada, Nova Scotia, British Columbia, Mexico, the Bahamas, British West Indies, the Hawaiian Islands, Cuba, Philippine Islands, Sandwich Islands, British Isles, France, Germany, Norway, Switzerland, Italy, Australia, New South Wales, India, China, South Africa, and many other countries.

Magnificent new church buildings have recently been completed and dedicated in New York City, Denver, Colo., and Concord, N. H.

All Christian Science churches, other than the Mother Church in Boston, are branches of that church. In all of these the Sunday services are uniform, and consist of correlative passages read from the Bible and the Christian Science text-book, "Science and Health, with Key to the Scriptures," by Mary Baker G. Eddy. The selections comprising the lesson sermon are compiled by a central committee, and are published by the Christian Science Publishing Society in Boston, in a pamphlet known as "The Christian Science Quarterly." The church services are conducted by two readers, generally a man and a woman. On Wednesday evening a meeting is held in every church of this denomination. Testimonies of healing and remarks on Christian Science are given by the members of the congregation at these meetings.

Mrs. Eddy says in her book, "Retrospection and Introspection:" "I claim for healing scientifically the following advantages: 1. It does away with all material medicines and recognizes the antidote for all sickness, as well as sin, in the immortal mind; and mortal mind is the source of all the ills which befall mortals. 2. It is more effectual than drugs, and cures when they fail, or only relieve, thus proving the superiority of metaphysics over physics. 3. A person healed by Christian Science is not only healed of his disease, but he is advanced morally and spiritually. The mortal body being but the objective state of the mortal mind, this mind must be renovated to improve the body." The absence of creed and dogma in the Christian Science Church, its freedom from materialism, mysticism, and superstition, also the simplicity, uniformity, and impersonality of its form of worship and organization, are among the distinguishing features which characterize this modern religious movement. Hypnotism, mesmerism, spiritualism, theosophy, faith-cure, and kindred systems are foreign to true Christian Science. Those practising these beliefs are denied admission to the Christian Science Church.

### The Theosophical Society.

MR. WELLER VAN HOOK, General Secretary of the American section, contributes the following statement:

The Theosophical Society was founded in New York City on November 17, 1875, by Mme. H. P. Blavatsky and Col. Henry S. Olcott, but its headquarters were removed in 1879 to Adyar, Madras, India. Its objects are three: (a) To form a nucleus of the Universal Brotherhood of Humanity, without distinction of race, creed, sex, caste, or color; (b) to encourage the study of comparative religion, philosophy, and science; (c) to investigate unexplained laws of nature and the powers latent in man. It has spread into almost all countries, and has now ten territorial sections, each presided over by a general secretary: America, Great Britain, India, Scandinavia, Holland, France, Italy, Germany, Australia, and New Zealand. During the 29 years of its existence it has admitted about 28,000 members and chartered over 750 branches. The membership at present of the American section is about 3,000; there are 77 branches. The society holds forth no doctrines and enjoins none, but Theosophy is the natural study of its members, and a large and increasing number of theosophical treatises is poured out by students. Reincarnation and Karma are the basic stones of the Theosophical system. The president, Mrs. Annie Besant, resides at the Adyar headquarters; the general secretary of the American section is Weller Van Hook, 103 State Street, Chicago, Ill. Some organizations using the name "Theosophical" have been formed since 1875, but they are distinct from and unaffiliated with the original Theosophical Society.

The Society appeals for support and encouragement to all who truly love their fellow men and desire the eradication of the evils caused by the barriers raised by race, creed or color, which have so long impeded human progress; to all scholars, to all sincere lovers of TRUTH, *wheresoever it may be found*, and to all philosophers, alike in the East and in the West; and lastly to all who aspire to higher and better things than the mere pleasures and interests of a worldly life, and are prepared to make the sacrifices by which alone a knowledge of them can be attained.

### The Universal Brotherhood and Theosophical Society.

MR. J. H. FUSSELL, Secretary of the Universal Brotherhood and Theosophical Society, Point Loma, Cal., contributes the following statement:

The Universal Brotherhood and Theosophical Society, founded by Mme. H. P. Blavatsky in New York, 1875, continued after her death under the leadership of the co-founder, William Q. Judge, and now under the leadership of their successor, Katherine Tingley, has its International Headquarters at the World's Theosophical Centre, Point Loma, California.

This organization declares that brotherhood is a fact in nature. The principal purpose of the organization is to teach brotherhood, demonstrate that it is a fact in nature, and make it a living power in the life of humanity, establishing brotherhood schools throughout the world, and creating a new literature. Its subsidiary purpose is to study ancient and modern religion, science, philosophy, and art, to investigate the laws of nature and the latent divine powers in man. It declares in its constitution that every member has a right to believe or disbelieve in any religious system or philosophy, each being required to show that tolerance for the opinions of others which he expects for his own. The head of this organization is Katherine Tingley, and the secretary-general is Frank M. Pierce. The headquarters are at Point Loma, Cal.

**The Salvation Army.**

THE following statement is contributed to THE WORLD ALMANAC by direction of the Commander: The Salvation Army is a religious body organized on military principles, with a view of reaching the non-churchgoers of the world. It was first started in July, 1865, in the East End of London as a Christian mission. Thirteen years later, on Christmas, 1878, it received the name of the Salvation Army. Since then its growth throughout the world has been increasing.

The father and founder, Gen. William Booth, was born in Nottingham, England, on April 10, 1829. In 1852 he entered the ministry of the Methodist Church, and became a powerful evangelist, attracting immense crowds and witnessing thousands of conversions. Finding, however, that the churchless masses could not be reached by ordinary methods, he resigned his pastorate and established the Army.

As a temperance movement it is stated that the Salvation Army has been the means of converting hundreds of thousands of confirmed drunkards. Total abstinence is a condition of membership. The International headquarters are at 101 Victoria Street, London, England. Its world-wide operations are carried on in 51 countries and colonies, embracing 7,316 posts, under the charge of 20,054 officers and employes, with 45,339 local officers, 17,099 brass bandmen, and about 50,000 musicians. 63 periodicals are published in 24 languages, with a weekly circulation of about 1,207,223. There are 663 Social Relief Institutions in the world, under the charge of nearly 3,000 officers and employes. About 7,000 fallen women annually pass through the 116 rescue homes, and from 80 to 90 per cent. of these are permanently restored to lives of virtue. There are 132 slum settlements in the slum districts of great cities, the worst dives, saloons, and tenements being regularly visited. The number of annual conversions in connection with the spiritual work has averaged from 200,000 to 250,000 during the past ten years, making a total of over 2,000,000, of whom not less than 200,000 were converted from lives of drunkenness.

The real estate owned by the Army amounts to about \$1,500,000, its personal property over \$400,000, and its annual trade turnover to more than \$200,000. The Salvation Army is incorporated in the State of New York. For the developments of its trade a special incorporation has been formed, the Reliance Trading Company, while the Salvation Army Industrial Homes Company has been incorporated for the extension of its rapidly growing industrial homes for the unemployed. Training colleges for cadets have been established for the training of officers in New York and Chicago, with a small branch in San Francisco.

The headquarters of the Salvation Army in America are at 120 West Fourteenth Street, New York City, where information may be obtained.

**The Volunteers of America.**

THE following statement of the purposes of the position and this organization has been prepared for THE WORLD ALMANAC in the office of Gen. Ballington Booth:

This organization is a philanthropic, social, and religious movement. It was inaugurated by Gen. and Mrs. Ballington Booth, in March, 1896, and incorporated November 6, 1896, in response to a number of requests on the part of American citizens. It is organized in military style, having as its model the United States Army, but in conjunction with military discipline and methods of work it possesses a thoroughly democratic form of government, having a constitution, and its by-laws being framed by a Grand Field Council that meets annually and is thoroughly representative. Though only eleven years old the Volunteers have representatives and branches of their benevolent work in almost all the principal cities of the United States. Its field is divided into regiments or sections, which come under the control and oversight of thirty principal staff officers, its chief centres being New York, Philadelphia, Boston, Pittsburgh, Denver, Chicago, Indianapolis, Cleveland, and San Francisco. It has philanthropic institutions in Chicago, Joliet, Austin, Fort Dodge, Kansas City, Pueblo, Boston, Lynn, Malden, Minneapolis, Erie, Pittsburgh, Buffalo, Newcastle, Philadelphia, Newark, Orangeburg, New York City and other centres.

In addition to the Volunteer reading rooms, thousands of copies of Christian literature are circulated in State prisons, jails, hospitals, soldiers' homes, and children's homes. In connection with the Volunteers, there are also sewing classes; hospital nurses; temporary financial relief departments; boys' fresh-air camps; Thanksgiving and Christmas dinners, and many other worthy undertakings.

### The Vedanta Society.

The following statement of the purposes of this Society has been prepared by the Secretary, Mrs. E. P. Cap :

The Vedanta Society of New York was established in 1884 by Swami Vivekananda of India, delegate to the Parliament of Religions at Chicago, and was regularly incorporated in 1898 by Swami Abhedananda, now at its head. The object of the Society is not to form a new sect or creed, or to make proselytes, but to explain through logic and reason the spiritual laws that govern our lives; to show that the True Religion of the Soul is not antagonistic to, but in harmony with, philosophy and science; to establish that Universal Religion which underlies all the various sects and creeds of special religions; to propagate the principles taught by great seers of Truth and religious leaders of different countries and illustrated by their lives; and to help mankind in the practical application of those principles in their spiritual, moral, intellectual and physical needs.

The present headquarters of the Society with its Circulating Library, Reading Room and Chapel, are at 135 West Eightieth Street, New York City. Here throughout the Winter season a service with lecture by Swami Abhedananda is held every Sunday morning at 11, and a class lecture on Tuesday evening at 8. There are Yogo classes for practical training in the Science of Breathing, in Concentration, Meditation and Self-Control every Thursday evening at 8, and on Saturday morning at 10.30. Besides these there is also a correspondence class for non-resident members in which the same instructions are given in writing by the Swami. An associate membership exists for those who do not wish regular instruction but who desire to be affiliated with the Society. Among the honorary members are Rev. E. Heber Newton, D. D., Charles E. Lamm, Ph. D., LL. D., Professor of Sanskrit at Harvard University; Hiram Corson, A. M., LL. D., Litt. D., Professor of English Literature Emeritus at Cornell University.

The officers of the Society are: *President*—Professor Herschel C. Parker. *Vice-President*—Stansbury Hagar. *Secretary*—Mrs. Emily Palmer Cape. *Treasurer*—E. Kissam.

The Society has a large publishing department and issues a catalogue containing nearly forty titles of works on the Philosophy and Religion of Vedanta. Within the last five years it has sent out from its headquarters 69,876 books and pamphlets written by Swamis of India. It also issues a monthly Bulletin. The Vedanta Society of New York has a Summer school called the "Vedanta Ashrama," It is situated in West Cornwall, Ct., on a farm of 250 acres. There are also centres in San Francisco and Los Angeles, besides a Peace Retreat in the mountains of Santa Clara County, Cal. These organizations in America are affiliated with hundreds of Vedanta Societies throughout India and Ceylon.

### The Latter-Day Saints.

The Mormons, or Church of Jesus Christ of Latter-Day Saints, were organized April 6, 1830, with six members, by Joseph Smith, at Fayette, Seneca County, N. Y. After being driven by mobs from various places in Missouri, Ohio, and Illinois, they settled at Great Salt Lake, Utah, under the leadership of Brigham Young, in 1847. The total church membership is 300,000, and the number of elders, 1,700. The present First President of the Church is Joseph Fielding Smith.

The following statement of the doctrines of the Church was issued with the approval of Prophet Joseph Smith:

1. We believe in God, the Eternal Father, and in his Son, Jesus Christ, and in the Holy Ghost.
  2. We believe that men will be punished for their own sins, and not for Adam's transgression.
  3. We believe that through the atonement of Christ all mankind may be saved, by obedience to the laws and ordinances of the Gospel.
  4. We believe that these ordinances are: First, Faith in the Lord Jesus Christ; second, Repentance; third, Baptism by immersion for the remission of sins; fourth, Laying on of hands for the Gift of the Holy Ghost.
  5. We believe that a man must be called of God, by "Prophecy, and by the laying on of hands," by those who are in authority to preach the Gospel and administer in the ordinances thereof.
  6. We believe in the same organization that existed in the Primitive Church, viz.: Apostles, prophets, pastors, teachers, evangelists, etc.
  7. We believe in the gift of tongues, prophecy, revelation, visions, healing, interpretation of tongues, etc.
  8. We believe the Bible to be the word of God, as far as it is translated correctly; we also believe the Book of Mormon to be the word of God.
  9. We believe all that God has revealed, all that He does now reveal, and we believe that He will yet reveal many great and important things pertaining to the Kingdom of God.
  10. We believe in the literal gathering of Israel and in the restoration of the Ten Tribes; that Zion will be built upon this continent; that Christ will reign personally upon the earth, and that the earth will be renewed and receive its paradisiac glory.
  11. We claim the privilege of worshipping Almighty God according to the dictates of our conscience, and allow all men the same privilege, let them worship how, where or what they may.
  12. We believe in being subject to kings, presidents, rulers, and magistrates, in obeying, honoring, and sustaining the law.
  13. We believe in being honest, true, chaste, benevolent, virtuous, and in doing good to all men; indeed, we may say that we follow the admonition of Paul. "We believe all things, we hope all things, we have endured many things, and hope to be able to endure all things. If there is anything virtuous, lovely, or of good report, or praiseworthy, we seek after these things."
- The Reorganized Church of Jesus Christ of Latter-Day Saints is a separate body, having its headquarters at Lamoni, Iowa. It was organized in 1851, and is presided over by Joseph Smith, Independence, Mo., son of the Prophet. Its enrolled membership is 52,000, and it has 800 active ministers, and a Sunday School membership of 21,000. The Brooklyn, N. Y., branch is at Prospect Place and Hopkinson Avenue, George Potts, Pastor.

### American Sunday-School Union.

The American Sunday-School Union is the offspring of the old First Day Society, which was founded in Philadelphia in 1791. In 1817 this organization became the Philadelphia Sunday and Adult School Union, and in 1824 it assumed its present title. Its objects are to "concentrate the efforts of Sabbath-school societies in different portions of our country to disseminate useful information; to circulate moral and religious publications in every part of the land, and endeavor to plant a Sunday-School wherever there is a population."

Some idea of the Society's work and growth may be obtained from the following facts: The Philadelphia Union began with one juvenile book in 1817, and with one missionary in 1821. Now the American Sunday-School Union's publications are numbered by the thousands, and it has distributed over \$10,000,000 worth of religious literature; it maintains more than 150 permanent missionaries and it has organized an average of more than 1,300 new Sabbath-schools a year—nearly four a day for every day of the last eighty years. Its present officers are: *President*—Morris K. Jesup. *Vice-Presidents*—John H. Converse, William N. Ashman and Isaac Sharpless. *Recording Secretary*—J. M. Andrews. The headquarters of the Society are at No. 1816 Chestnut Street, Philadelphia, Pa.

**Society of Mayflower Descendants.**

THE Society of Mayflower Descendants was organized in the City of New York December 22, 1894, by lineal descendants of the Mayflower pilgrims, "to preserve their memory, their records, their history, and all facts relating to them, their ancestors, and their posterity." Every lineal descendant over eighteen years of age, male or female, of any passenger of the voyage of the Mayflower, which terminated at Plymouth, Mass., December, 1620, including all signers of "The Compact," are eligible for membership. The initiation fee is \$10 and the annual dues are \$5. The annual meeting is held November 21, the anniversary of the signing of "The Compact." Societies have been organized in New York, Connecticut, Massachusetts, Pennsylvania, Illinois, District of Columbia, Ohio, New Jersey, Wisconsin, Rhode Island, Michigan, Minnesota, and Maine. William Lawrence, Boston. *Surgeon-General*—James G. Mumford, Boston. *Chancellor-General*—Prof. Theodore S. Woolsey, New Haven.

The Society of Colonial Wars was instituted in 1892 to "perpetuate the memory of these events and of the men who, in military, naval, and civil positions of high trust and responsibility, by their acts or counsel assisted in the establishment, defence, and preservation of the American Colonies, and were in truth the founders of this nation. With this end in view it seeks to collect and preserve manuscripts, rolls, and records; to provide suitable commemorations or memorials relating to the American Colonial period, and to inspire in its members the paternal and patriotic spirit of their forefathers, and in the community respect and reverence for those whose public services made our freedom and unity possible." Eligibility is confined to an adult male descendant of an ancestor who fought in battle under Colonial authority, from the settlement of Jamestown, Va., in 1607, to the battle of Lexington, in 1775, or who served as Governor, Deputy-Governor, Lieutenant-Governor, Member of the Council, or as a military, naval, or marine officer in the service of the Colonies, or under the banner of Great Britain, or was conspicuous in military, official, or legislative life during that period.

**The Order of the Founders and Patriots of America.**

*Governor-General*—Admiral George Dewey, U. S. N., Washington, D. C. *Deputy Governor-General*—Rev. John Gaylord Davenport, D. D., Waterbury, Ct. *Chaplain-General*—Joseph F. Falsom, D. D., Troy, N. The historic and patriotic Order of the Cincinnati was founded by the American and French officers at the cantonments of the Continental army on the Hudson at the close of hostilities in the War of the Revolution for American Independence, May 10, 1783.  
 In forming the society it was declared that, "To perpetuate, therefore, as well the remembrance of this vast event as the mutual friendships which have been formed under the pressure of common danger, and, in many instances, cemented by the blood of the parties, the officers of the American army do hereby, in the most solemn manner, associate, constitute, and combine themselves into one Society of Friends, to endure as long as they shall endure, or any of their eldest male posterity, and in failure thereof the collateral branches who may be judged worthy of becoming its supporters and members."  
 For convenience, thirteen State societies were formed, and one in France, under the direct patronage of Louis XVI. Upon the roll of original members appeared the names of all the great historic military and naval characters of the Revolution, and upon the roll of honorary members, elected for their own lives only, appeared many of the signers of the Declaration of Independence.

## THE RIGHT TO MEMBERSHIP.

All Continental officers who had served with honor and resigned after three years' service as officers, or who had been rendered supernumerary and honorably discharged, in one of the several reductions of the American army, or who had continued to the end of the war, and all French officers who had served in the co-operating army under Count d'Estaing, or auxiliary army under Count de Rochambeau, and held or attained the rank of colonel for such services, or who had commanded a French fleet or ship of war on the American coast, were entitled to become original members, and upon doing so were required to contribute a month's pay.

## STATE SOCIETIES.

The Cincinnati is organically one society in membership, but for convenience in admission of members and in its charitable and patriotic objects is subdivided into State societies, there being thirteen, and the one in France, which was dispersed at the Reign of Terror in 1793, but is being re-established. Four dormant societies were restored to membership at the triennial meeting of 1902.

Membership descends to the eldest lineal male descendant, if judged worthy, and, in failure of direct male descent, to male descendants through intervening female descendants.  
 The general society when legislating for the good of the Order is composed of the general officers and five delegates from each State society, and meets triennially. In 1854 it ruled that proper descendants of Revolutionary officers who were entitled to original membership, but who never could avail themselves of it, are qualified for hereditary membership, if found worthy, on due application.

## Sons of the Revolution.

*General President*—Ex-Gov. John Lee Carroll, Md. *General Secretary*—J. M. Montgomery, N. Y.  
*General Vice-President*—Garrett D. W. Vroom, N. J. *Assistant General Secretary*—Wm. H. Harris, Md.  
*Second General Vice-President*—W. G. Harvey, S. C. *General Registrar*—Walter Gilman Page, Mass.  
*General Treasurer*—R. M. Cadwalader, Pa. *General Historian*—H. O. Collins, Cal.  
*Assistant General Treasurer*—Henry Cadle, Mo. *General Chaplain*—Rev. Thos. E. Green, D. D., Iowa.

The society of the "Sons of the Revolution" was originated in New York in 1875 by John Austin Stevens, in conjunction with other patriotic gentlemen of Revolutionary ancestry. The New York Society was instituted February 22, 1876; reorganized December 3, 1883, and incorporated May 3, 1884, to "keep alive among ourselves and our descendants the patriotic spirit of the men who, in military, naval, or civil service, by their acts or counsel, achieved American independence; to collect and secure for preservation the manuscript rolls, records, and other documents relating to the War of the Revolution, and to promote intercourse and good feeling among its members now and hereafter." Eligibility to membership is confined to male descendants, above the age of twenty-one years, from an ancestor who as either a military, naval, or marine officer, soldier, sailor, or marine, or official in the service of any one of the thirteen original Colonies or States, or of the National Government, representing or composed of those Colonies or States, assisted in establishing American independence during the War of the Revolution between the 19th day of April, 1775, when hostilities commenced, and the 19th day of April, 1783, when they were ordered to cease. The next triennial meeting of the general society will be held in the City of Washington, April 19, 1908.

The officers of the New York Society Sons of the Revolution are as follows: *President*—Edmund Wetmore. *Vice-Presidents*—Robert Olyphant, Joseph Tompkins Low, William Graves Bates. *Secretary*—Henry Russell Drowne, 146 Broadway. *Treasurer*—Arthur Melvin Hatch. *Registrar*—Prof. Henry Phelps Johnston. *Chaplain*—Rev. Morgan Dix.

There are thirty State societies and a society in the District of Columbia. The aggregate membership is 7,560, that of the New York Society being over 2,000, and the Pennsylvania Society over 1,000.

## Sons of the American Revolution.

*President-General*—Nelson A. McClary, Ill. *Treasurer-General*—William Secor, Iowa.  
*Vice-Pres.-Gen.*—Trueman G. Avery, N. Y. *Registrar-General and Secretary-General*—A. Howard Clark, D. C.  
*Vice-Pres.-Gen.*—Pelham W. Ames, Cal. *Historian-General*—William F. Slocum, Col.  
*Vice-Pres.-Gen.*—Julian W. Whiting, Ala. *Chaplain-General*—Rev. J. Herman Randall, N. Y.  
*Vice-Pres.-Gen.*—Clarkson N. Guye, Col.

The National Society of "Sons of the American Revolution" was organized in New York April 30, 1889, and chartered in Connecticut in 1890. Its purposes are the same as those of the older organization, the "Sons of the Revolution." State societies exist in thirty-eight States, the District of Columbia, and Hawaii. A California society of descendants of Revolutionary patriots, entitled "Sons of Revolutionary Sires," organized July 4, 1875, having reorganized and changed its name in 1889, has been admitted to membership. A formal movement by this society and the "Sons of the Revolution" toward a union was attempted in 1892, and again in 1897, but was not successful. The total membership of the organization is about 11,000.

The New York or Empire State Society was organized February 11, 1890. The following are the officers: *President*—William A. Marble. *Secretary*—Louis Annin Ames, 239 Broadway, New York. *Registrar*—Teunis D. Hunting. *Historian*—Josiah C. Pumpelly.

## Aztec Club of 1847.

*President*—Gen. Richard Coulter Drum, U. S. A., Bethesda, Md. *Vice-President*—Col. Augustus S. Nicholson, U. S. M. C., Hamilton, Va. *Secretary*—William M. Sweeney, Astoria, N. Y. *Treasurer*—William Turnbull, New York City. *Vice-Treasurer*—Edward H. Floyd-Jones, New York City.

This society, originally composed of officers of the United States Army who served in the war with Mexico, was formed in the City of Mexico in 1847, and has been continued, "with a view to cherish the memories and keep alive the traditions that cluster about the names of those officers who took part in the Mexican War." Membership is confined to officers of the army, navy, and marine corps who served in the war, or their male blood relatives. Each primary member may nominate as his successor his son or a male blood relative, who during the life of the primary member is known as associate-member, and on the death of the former is entitled, as his representative, to full membership. There are 200 members.

### Society of Tammany, or Columbian Order.

*Grand Sachem*—William Bourke Cockran. *Sachems*—Louis F. Haffen, Daniel F. McMahon, Daniel F. Cohalan, John T. Scannell, Charles E. Murphy, Randolph Guggenheimer, Maurice Featherston, Asa Bird Gardner, George W. Plunkitt, Timothy D. Sullivan, John Fox, William Dalton. *Secretary*—Thomas F. Smith. *Treasurer*—Joseph P. Day. *Sagamore*—Bryan P. Henry. *Wiskankie*—John A. Boyle.

This organization was formed in 1789, being the effect of a popular movement in New York, having primarily in view a counterweight to the so-called "aristocratic" Society of the Cincinnati. It was essentially anti-Federalist or democratic in its character, and its chief founder was William Mooney, an upholsterer and a native-born American of Irish extraction. It took its first title from a noted, ancient, wise, and friendly chief of the Delaware tribe of Indians, named Tammany, who had, for the want of a better subject, been canonized by the soldiers of the Revolution as the American patron saint. The first meeting was held May 12, 1789. The act of incorporation was passed in 1805. The Grand Sachem and thirteen Sachems were designed to typify the President and the Governors of the thirteen original States. William Mooney was the first Grand Sachem. The Society is nominally a charitable and social organization, and is distinct from the General Committee of the Tammany Democracy, which is a political organization, and cannot use Tammany Hall without the consent of the Society.

### Military Order of Foreign Wars.

THE Military Order of Foreign Wars of the United States was instituted in the City of New York December 27, 1894, by veterans and descendants of veterans of one or more of the five foreign wars which the United States had been engaged in, to wit: The War of the Revolution, the War with Tripoli, the War of 1812, the Mexican War, and the War with Spain. "to perpetuate the names and memory of brave and loyal men who took part in establishing and maintaining the principles of the Government" in said wars, and "to preserve records and documents relating to said wars, and to celebrate the anniversaries of historic events connected therewith." Since the establishment of the order the United States has fought its fifth foreign war. By an amendment to the constitution all American officers who participated in the War with Spain, or any future foreign campaign recognized by the United States government as "war," are rendered eligible to membership as veteran companions.

Members are entitled "companions," and are either "veteran companions" or "hereditary companions." The former are commissioned officers of the army, navy, or marine corps of the United States who participated in any of the foreign wars of the United States. The latter are direct lineal descendants, in the male line only, of commissioned officers who served honorably in any of the said wars. Commanderies may be established in each of the States, and State commanderies now exist in the States of New York, Pennsylvania, Connecticut, Illinois, California, Massachusetts, Maryland, Ohio, Missouri, Vermont, Virginia, Rhode Island, Louisiana, Indiana, Wisconsin, Michigan, Texas, Georgia, Colorado, New Jersey, and the District of Columbia.

The National Commandery was instituted March 11, 1896, by the officers of the New York, Pennsylvania, and Connecticut commanderies. The following are the officers of the National Commandery: *Commander-General*—Major-Gen. Alexander S. Webb, U. S. A. *Secretary-General*—James H. Morgan, Waldorf-Astoria Hotel, New York. *Treasurer-General*—Col. Oliver C. Bosbyshell. *Registrar-General*—Rev. Henry N. Wayne. *Judge-Advocate-General*—Frank Montgomery Avery. Present membership, over 1,700 companions. There are Vice-Commanders-General representing each State commandery.

### Regular U. S. Army and Navy Union.

A PATRIOTIC, fraternal, and beneficial organization, chartered under act of Congress, for soldiers' and sailors' rights and benefits.

*National Commander*—James B. Morton, Washington, D. C. *National Senior Vice-Commander*—James P. Lockwood, Chicago, Ill. *National Junior Vice-Commander*—Dr. John H. Grant, Buffalo, N. Y. *Adjutant-General*—Michael J. Hackett, Headquarters, 4 Warder Street, N. W., Washington, D. C. Membership is confined to regulars of the United States Army, Navy, or Marine Corps, whether discharged, retired, or in the service.

### Society of Veterans of Indian Wars

OF THE UNITED STATES.

*Commander*—Brig.-Gen. Judson D. Bingham, U. S. A., retired, *Historian*—Brig.-Gen. Charles King, U. S. A. *Assistant Recorder*—Major G. A. Bingham, U. S. A., Philadelphia, Pa. This society was instituted by officers of the United States Army at Philadelphia, April 23, 1896.

The objects are "to perpetuate the faithful services, heroism, and privations of the officers and soldiers of the Army of the United States of America, as well as of the auxiliary forces of the several States of the Union, in their successive campaigns conducted against a savage foe on our frontiers, in the interests of civilization and for the settlement and defence of our Territories, at different periods in the history of our common country since the close of the War of the Revolution; and also to collect and preserve for publication a record of these services and other historical data relating thereto, as well as to unite in a fraternal bond of union all those who are entitled to membership therein."

### Order of Indian Wars of the United States.

*Commander*—Major-General Alfred E. Bates, U. S. A., retired, Metropolitan Club, Washington, D. C. *Recorder and Treasurer*—Major Lloyd M. Brett, 1st U. S. Cavalry, Washington, D. C. *Historian*—Brig.-Gen. Charles King, U. S. A.

This order was organized at Chicago, Ill., June 10, 1896, and received its charter from the State of Illinois. The order consists of two classes of companions: First, commissioned officers of the army, navy and marine corps, and of State and Territorial organizations, which have been, or may hereafter be, engaged in conflicts, battles or actual field service against hostile Indians in the United States; Second, sons of living members of the first class. The object of the Association is to perpetuate the history of the services rendered by the American military forces in their conflicts and wars within the territory of the United States, and to collect and secure for publication historical data relating to the instances of brave deeds and personal devotion by which Indian warfare has been illustrated.

### Medal of Honor Legion.

THE Legion is composed of officers and enlisted men of the United States army and navy who have been awarded medals of honor for most distinguished gallantry in action during any war in which the United States has been engaged. At the present time it has 458 such members. At the last reunion, held at Winsted, Ct., September 24-25, 1906, the following officers were elected: *Commander*—P. DeLacy, Scranton, Pa. *Senior Vice-Commander*—S. B. Horne, Winsted, Ct. *Junior Vice-Commander*—William Search, Boston, Mass. *Quartermaster*—N. D. Preston, Philadelphia, Pa. *Chaplain*—Rev. Dr. William Hubbell, New York City. *Adjutant*—John C. Huterson, Philadelphia, Pa. *Judge Advocate*—Walter Thorn, Brooklyn, N. Y. *Inspector*—Charles H. Houghton, Newark, N. J. *Surgeon-in-Chief*—Gabriel Grant, M. D., New York City. *Historian*—St. Clair A. Mulholland, Philadelphia, Pa.

### Naval Order of the United States.

THE Naval Order of the United States is composed of a General Commandery and commanderies in the States of Massachusetts, Pennsylvania, New York, California, and Illinois, and in the District of Columbia. The General Commandery meets triennially on October 5, and the State Commanderies meet annually in the month of November. The Massachusetts Commandery is the parent Commandery, and was organized at Boston on July 4, 1890. The General Commandery was established three years later, on June 19, 1893. The Companions of the Order are officers and the descendants of officers who served in the navy and marine corps in any war or in any battle in which the said naval forces of the United States have participated. The membership clause, as adopted at the triennial congress held at Boston, October 5, 1895, provides for two classes of members: First, veteran officers and their male descendants; and, second, enlisted men who have received the United States naval medal of honor for bravery in the face of the enemy.

The officers of the General Commandery elected at the triennial meeting October 5, 1907, are: *General Commander*—Admiral George Dewey, U. S. N., New York. *Vice-General Commanders*—Rear-Admiral Joseph B. Coghlan, U. S. N., New York; Rear-Admiral H. W. Lyon, U. S. N., Massachusetts; Rear-Admiral James H. Dayton, U. S. N., Illinois. *General Recorder*—Charles W. Ruschenberger (late U. S. N.), Pennsylvania. *Assistant General Recorder*—William H. Stayton (late U. S. N.), New York. *General Registrar*—H. M. M. Richards (late U. S. N.), Pennsylvania. *General Treasurer*—George De Forest Barton (late U. S. N.), New York. *General Historian*—Charles P. Welch, U. S. N., California. *General Chaplain*—George Williamson-Smith, D. D. (late U. S. N.), New York. *General Judge Advocate*—M. B. Field (late U. S. N.), New York.

### Army and Navy Union.

*National Commander*—J. Edwin Browne, Baltimore, Md. *Senior Vice-National Commander*—Bernard A. Flood, New York City. *Junior Vice-National Commander*—J. E. B. Stuart, Virginia. *Adjutant-General*—E. J. Bonner, Baltimore, Md. *Inspector-General*—S. E. Adams, Jersey City, N. J. *Paymaster-General*—J. R. McCullough, New York. *Judge Advocate-General*—R. McKinlay Power, New York. *Surgeon-General*—J. E. Hendricksen, Virginia. *National Chaplain*—Rev. John P. Chidwick, Brooklyn, N. Y.

The Army and Navy Union was organized at Cincinnati and incorporated under the laws of Ohio in March, 1893. The national organization (called the National Corps) was organized in August, 1890. The Union admits to its ranks any man who possesses an honorable discharge from the United States service, either regular or volunteer army and navy or marine corps, whether said service was before, during, or since any war at home or abroad. There are twelve garrisons in Greater New York.

### The Navy League of the United States.

THE Navy League of the United States was incorporated under the laws of the State of New York on January 2, 1903. Its declared object being "to acquire and spread before the citizens of the United States, through branch organizations and otherwise, information as to the condition of the Naval forces and equipment of the United States, and to awaken public interest and co-operation in all matters tending to aid, improve, and develop their efficiency." It is strictly non-partisan. Men, women and children are eligible to membership. The button of the League is of silver gilt and blue enamel, with letters in white, and anchor of gold, and is worn by members. The membership fee is one dollar annually. There are eighty-three sections in the United States, and sections in England, France, Canada, Colombia, and two in Italy. Five or more citizens may sign an application for a charter to form a section of the League. The headquarters of the League are at 78 Broad Street, New York City.

The General Officers are: *President*—Horace Porter; *Vice-President*, William McAdoo; *Secretary*, Henry H. Ward; *Treasurer*, Clinton E. Braine; *Recorder*, Robert S. Sloan; *General Counsel*, Herbert L. Satterlee; *Assistant Secretary*, George H. Owen, in charge of headquarters. *Honorary Members*—President Theodore Roosevelt, and Secretary of the Navy Charles J. Bonaparte. *Directors*—Captain J. W. Miller, W. H. Stayton, A. Noel Blakeman, ex-Secretary of the Navy Benjamin F. Tracy, Louis A. Osborne, George C. Sargent, Robert S. Organized 1887. 6,000 members. 1,500 contributing members. 30 associations in all the principal cities of the United States.

## Societies of the War of 1812.

### SOCIETY OF THE WAR OF 1812 AND VETERAN CORPS OF ARTILLERY IN THE STATE OF NEW YORK.

INSTITUTED as a military society by the veterans of the War of 1812 on January 3, 1826, in the City of New York, and incorporated under the laws of the State of New York by the surviving veteran members, January 8, 1892. Consolidated January 8, 1848, with the Veteran Corps of Artillery (instituted by officers of the Revolutionary War November 25, 1790). Hiram Cronk, last surviving Veteran member War of 1812, born April 29, 1800, died May 13, 1905.

The officers are: *President*—Rev. Morgan Dix, D. D., D. C. L. *Vice-President*—Asa Bird Gardiner, LL. D., L. H. D. *Secretary*—Howland Pell, 27 William Street, New York. *Assistant Secretary*—Charles Isham. *Treasurer*—Charles Augustus Schermerhorn.

The original members comprise those who actually served in the military or naval forces of the United States during the War of 1812, or on vessels other than merchant ships which sailed under commissions of letters of marque and reprisal from the United States in that war.

Eligibility to hereditary membership is confined to descendants of those who actually served in the War of 1812, and descendants of former members of the Society in the State of New York, and of other military societies of 1812.

### THE GENERAL SOCIETY OF THE WAR OF 1812.

Composed of federated State societies, in Pennsylvania, Maryland, Massachusetts, Connecticut, Ohio, Illinois, District of Columbia, New York, New Jersey, and Delaware, the members of each of which State Societies are borne upon the membership roll of the General Society. Any male person above the age of twenty-one years who participated in, or who is a lineal descendant of one who served during the War of 1812-14 in the army, navy, revenue marine, or privateer service of the United States, offering satisfactory proof to the State Society to which he makes application, and is of good moral character and reputation, may become a member. In case of failure of lineal descendants of an actual participant in said war, one collateral representative who is deemed worthy may be admitted to membership. *President-General*—John Cadwalader, Pennsylvania. *Secretary-General*—Henry Randall Webb, 727 Nineteenth Street, N. W., Washington, D. C. *Assistant Secretary-General*—John Mason Dulany, Baltimore, Md. *Treasurer-General*—George H. Richards, Orange, N. J. *Assistant Treasurer-General*—William Porter Adams, Illinois. *Surgeon-General*—George Horace Burgin, M. D., Pennsylvania. *Judge-Advocate-General*—Aloysius Leo Knott, Maryland. *Chaplain-General*—Rt. Rev. Leighton Coleman, Delaware.

### The American Flag Association.

*President*—Col. Ralph E. Prime, Yonkers, N. Y. *Secretary*—Theodore Fitch, 120 Broadway, New York; *Treasurer*—A. Noel Blackman, 149 Nassau Street, New York. The American Flag Association was organized February 17, 1898, its motto being, "One Flag, One Country, God over all." Its object is to secure National and State legislation for the protection of the flag from degrading and desecrating uses, and to secure a general observance of June 14 as "Flag Day," because on that day in 1777 Congress adopted the United States flag. The Association is composed of individual members and also the members of the Flag Committees of patriotic societies for the purpose of fostering public sentiment in favor of honoring the flag of our country and preserving it from desecration. It aims to co-ordinate the efforts of all flag committees.

## Women's Patriotic Societies.

### COLONIAL DAMES OF AMERICA.

#### OFFICERS.

*President*—Mrs. James W. Gerard. *First Vice-President*—Mrs. Edward King. *Second Vice-President*—Miss J. J. Boudinot. *Treasurer*—Miss Helen Van C. De Peyster. *Secretary*—Mrs. Timothy Matlack Cheesman, 109 University Place, New York City. *Historian*—Miss Julia Livingston DeLafield. *Advisory Council*—Henry E. Howland, Franklin Bartlett, Louis V. Bright.

The Society of the Colonial Dames of America was organized in the City of New York May 23, 1890, and was the first society of women for this patriotic purpose founded in this country. It was incorporated April 23, 1891. The Society is purely patriotic and educational in its objects, which are (1) To collect and preserve relics, manuscripts, traditions, and mementoes of the founders and builders of the thirteen original States of the Union, and of the heroes of the War of Independence, that the memory of their deeds and achievements may be perpetuated. (2) To promote celebrations of great historic events of National importance, to diffuse information on all subjects concerning American history, particularly among the young, and to cultivate the spirit of patriotism and reverence for the founders of American constitutional history. This Society has already a large membership and chapters in many States. It is a distinct organization from that which follows.

### COLONIAL DAMES OF AMERICA.

#### OFFICERS OF THE NATIONAL SOCIETY.

*Honorary President*—Mrs. Justine Van Rensselaer Townsend. *President*—Mrs. Herbert A. Claiborne. *Vice-Presidents*—Mrs. Samuel Colt, Connecticut; Mrs. Henry F. L. Lyster, Michigan; Mrs. William Reed, Maryland. *Secretary*—Mrs. Joseph Lamar, Georgia. *Assistant Secretary*—Mrs. Rosa Wright Smith, District of Columbia. *Treasurer*—Mrs. Alexander J. Cassatt, Philadelphia, Pa. *Registrar*—Mrs. Emil Richter, Portsmouth, N. H. *Historian*—Miss Anne Hollingsworth Wharton.

This society is a distinct organization from the one described in the first paragraph. The National Society is composed of delegates from the State societies. These exist in the thirteen original States and in twenty-one other States and the District of Columbia, and are all incorporated. The aggregate membership is over 5,000. The President of the New York State Society is Mrs. Anson P. Atterbury. It is the sole custodian of the Colonial Museum in New York.

Under the constitution of the National Society it is prescribed that the members shall be women "who are descended in their own right from some ancestor of worthy life who came to reside in an American Colony prior to 1750, which ancestor, or some one of his descendants, being a lineal ascendant of the applicant, shall have rendered efficient service to his country during the Colonial period, either in the founding of a commonwealth or of an institution which has survived and developed into importance, or who shall have held an important position in the Colonial Government, and who, by distinguished services, shall have contributed to the founding of this great and powerful nation." Services rendered after 1776 do not entitle to membership, but are accepted for supplemental applications. There is no admission except through Colonial ancestry.

The Union Veteran Legion was organized at Pittsburgh, Pa., March, 1884, and the National Organization was perfected November 17, 1886. Encampments are now organized in 21 States and the District of Columbia, numbering 152 encampments. The membership is over 20,000. To become a member, the applicant must have been an officer, soldier, sailor, or marine of the Union army, navy, or marine corps during the late Civil War, who volunteered prior to July 1, 1863, for a term of three years, and was honorably discharged for any cause, after a service of at least two continuous years; or was, at any time, discharged by reason of wounds received in the line of duty; also those who volunteered for a term of two years prior to July 22, 1861, and served their full term of enlistment, unless discharged for wounds received in the line of duty; but no drafted person, nor substitute, nor any one who has at any time borne arms against the United States, is eligible. A statement by the Adjutant-General of the Legion says: "It is believed that those who entered the service prior to July, 1863, had but one object in view, and that was the preservation of the Union. There were no bounties prior to that date, nor were there any fears of a draft; consequently, those who shouldered a musket or wielded a sabre felt that it was a sacred duty to offer their lives in defence of their country's honor."

Williams, Louisville, Ky.; Mrs. Magnus Thompson, Washington, D. C., are honorary presidents for life.

The United Daughters of the Confederacy was organized at Nashville, Tenn., September 10, 1894. It is composed of the widows, wives, mothers, sisters, and lineal female descendants of men who served honorably in the army and navy of the Confederate States, or who served in the civil service of the Confederate States or one of the Southern States, or who gave personal services to the Confederate cause. There are local federations, governed by State divisions, which in turn are subordinate to the general organization. The objects of the United Daughters of the Confederacy, as stated in the constitution of the society, are "social, literary, historical, monumental, benevolent, and honorable in every degree, without any political signification whatever." It will endeavor: (1) To unite in the federation all bodies of Southern women now organized or that may hereafter be formed. (2) To cultivate ties of friendship among our women whose fathers, brothers, sons, and, in numberless cases, mothers, shared common dangers, sufferings, and privations; and to perpetuate honor, integrity, valor, and other noble attributes of true Southern character. (3) To instruct and instill into the descendants of the people of the South a proper respect for and pride in the glorious war history, with a veneration and love for the deeds of their forefathers which have created such a monument of military renown, and to perpetuate a truthful record of the noble and chivalric achievements of their ancestors. All with the view of furnishing authentic information from which a conscientious historian will be enabled to write a correct and impartial history of the Confederate side during the struggle for Southern independence. The organization now has 900 chapters in the United States, North and South, with 40,000 members.

COST OF THE BRITISH ROYAL FAMILY.

The annuities paid by the British people to the royal family for its support are as follows: The King and Queen, \$2,350,000; Prince of Wales, \$100,000; Princess of Wales, \$50,000; Princess Christian, \$30,000; Princess Louise (Duchess of Argyll) \$30,000; Duke of Connaught, \$25,000; Princess Beatrice, \$30,000; Duchess of Albany, \$30,000; Duchess of Mecklenburg-Strelitz, \$15,000; Trustees for the King's Daughters, \$90,000; Total, \$2,910,000. The King also receives the revenues of the Duchy of Lancaster. During recent years these have amounted to about \$500,000 per annum. The Prince of Wales has an income also from the revenues of the Duchy of Cornwall amounting to about \$900,000 per annum. When the royal children marry dowries are usually provided for them. The last of the children of the late Queen Victoria to marry, Princess Beatrice, received \$150,000 as dowry from the British people by Parliamentary grant.

## Reigning Families

## OF THE PRINCIPAL EUROPEAN COUNTRIES.

## AUSTRIA-HUNGARY.

**Francis Joseph I.**, the Emperor of Austria and King of Hungary, was born August 18, 1830, and was proclaimed Emperor of Austria after the abdication of his uncle, Ferdinand I., on December 2, 1848. He was crowned King of Hungary June 8, 1867. He married, in 1854, Elizabeth, a daughter of Duke Maximilian of Bavaria. She died by the hand of an Anarchist in Geneva, September 10, 1898. They had issue:

1. Archduchess Gisela, born 1856; married to Leopold, son of the Regent Luitpold of Bavaria. Issue, two daughters and two sons.
2. Archduke Rudolph, late heir apparent, born 1858; died by suicide, 1889. He married, 1881, Stephanie, daughter of the present King of the Belgians, and had issue one daughter, the Archduchess Elizabeth, born 1883; married, 1902, Prince Otto Windischgrätz. The widowed Crown Princess Stephanie married, March, 1906, Count Elmer Lonyay.

3. Archduchess Marie Valerie, born 1868; married, 1890, Archduke Francis-Salvator of Tuscany. On the death of the Crown Prince, in 1889, the right of succession to the throne passed to the Emperor's eldest brother, the Archduke Charles Louis, who was born 1833, and died 1896; he married, 1862 (second marriage), the Princess Annunciata, daughter of King Ferdinand II. of Naples, and had issue the Archduke Francis Ferdinand, born 1863, who is the heir presumptive to the throne (married,morganatically, 1900, Countess Sophie Chotek and renounced the claim of his issue by her to the throne); the Archduke Otto, born 1865, died 1906, married to the Princess Marie Josefa of Saxony, had two sons (Archdukes Charles, born 1887, and Maximilian, born 1895); the Archduke Ferdinand, born 1868, and unmarried, and the Archduchess Margaret Sophia, born 1870, died 1902; she married in 1893 Albert, Duke of Württemberg. By a third marriage, the Archduke Charles Louis had two daughters.

The Emperor has a second brother, the Archduke Louis Victor, born 1842, who is unmarried, and a sister-in-law, Empress Carlotta of Mexico, the widow of his brother Maximilian, executed at Queretaro in 1867. She is insane, and lives in Belgium with the King, her brother.

There are over seventy other archdukes and archduchesses of Austria, cousins of the Emperor, collateral relatives of the reigning house and members of the formerly reigning branches of Tuscany and Modena. The family is descended from Count Rudolph of Hapsburg, who was elected Emperor of Germany in 1273.

## BAVARIA.

**Otto**, King of Bavaria, was born April 27, 1848, and succeeded his brother, Ludwig II., June 13, 1886, when that mad monarch committed suicide by drowning himself in the Starnberg Lake. Otto is also crazy, is shut up in one of his châteaux, and the kingdom is governed by Prince Luitpold, his uncle, as regent. The latter is also the heir apparent to the throne; was born in 1821; married, 1844, the Austrian Archduchess Augusta of Tuscany, who is dead, and has four children:

1. Prince Louis, born 1845; married the Austrian Archduchess Maria Theresa, and has six daughters and four sons, the eldest of the latter being Prince Rupert, born 1869, and married, 1900, his cousin, Duchess Marie Gabrielle of Bavaria.
2. Prince Leopold, born 1846; married to the Austrian Archduchess Gisela, daughter of the Emperor Francis Joseph I. There are two daughters and two sons.
3. Princess Theresa, born 1850; Prioress of a Convent in Munich.
4. Prince Arnulf, 1852, married the Princess Theresia of Lichtenstein, and died 1907, leaving a son, Prince Henry.

King Otto has five cousins who bear princely titles, children of his dead uncle, Adalbert. The royal house of Bavaria comes from the Counts of Wittelsbach of the twelfth century, one of whose descendants was elevated to the rank of Elector, and a later one made King by Napoleon I.

## BELGIUM

**Leopold II.**, King of the Belgians, was born April 9, 1835, and was a son of Leopold I., Prince of Saxe-Coburg-Gotha (uncle of Queen Victoria), who was elected King of the Belgians in 1831, and Princess Louise, daughter of King Louis Philippe of France. The present King, who ascended the throne in 1865, was married, in 1853, to the Austrian Archduchess Marie Henriette (died 1902), and has the following children:

1. Princess Louise, born 1858; married to Prince Philippe of Saxe-Coburg-Gotha.
2. Princess Stephanie, born 1864; married, 1881, to the late Crown Prince Rudolph of Austria, and has one daughter. Princess Stephanie married, 1900, Elmer, Count Lonyay of Nagy-Lonyay and Vasoras-Nameny. Chamberlain to the Emperor of Austria.
3. Princess Clementine, born 1872.

The King's brother was Prince Philippe, Count of Flanders, born in 1837; married to the Hohenzollern Princess Marie, and died in 1905. His son, Prince Albert, is the present heir apparent, born in 1875, and married, in 1900, the Princess Elizabeth (daughter of Duke Charles Theodore of Bavaria). They have two sons, Prince Leopold, born in 1901, and Charles Theodore, born in 1903, and a daughter, Princess Marie Jose, born 1906. Prince Philippe had also two daughters, Henriette, born 1870; married, 1896, the Duke of Vendôme; and Josephine, born 1872; married, 1894, Prince Charles of Hohenzollern-Sigmaringen.

The sister of the King is the hapless ex-Empress Carlotta of Mexico, widow of Maximilian. She was born in 1840, widowed in 1867, has no children, and is now insane.

## DENMARK.

**Frederick VIII.**, King of Denmark, succeeded to the throne of Denmark by virtue of the law of the Danish succession on the death of his father, King Christian IX., in 1906. He was born 1843; married the Princess Louise of Sweden in 1869, and has three daughters and four sons, the eldest of the latter being Crown Prince Christian, born in 1870, and married, 1898, Princess Alexandrina of Mecklenburg-Schwern, and has two sons; and the second, Prince Charles, born 1872, and married, 1896, Princess Maud, third daughter of King Edward VII., and elected King of Norway in 1905, as Haakon VII. The eldest daughter is married to Prince Charles of Sweden.

The King's brothers and sisters are:

1. The Queen of Great Britain and Ireland (Alexandra), born 1844; married 1863, and has four living children.

2. The King of the Hellenes (George I.), born 1845; married to the Grand Duchess Olga of Russia, and has one daughter and five sons, the eldest of the latter being Prince Constantine.

3. The Dowager Empress of Russia (Dagmar), born 1847; married the late Czar Alexander III. in 1866, and has four children, one being the present Czar.

4. The Duchess of Cumberland (Thyra), born 1853; married the present Duke of Cumberland (English title), son of the ex-King of Hanover, in 1878, and has two sons and three daughters.

## REIGNING FAMILIES—Continued.

5. Prince Waldemar, born 1858; married, 1885, the Princess Marie of Orleans, daughter of the Duke of Chartres, and has four sons and a daughter. He was offered the crown of Bulgaria in 1886, but declined.

## GERMANY.

**William II.**, German Emperor and King of Prussia, was born January 27, 1859; succeeded his father, the Emperor Frederick III., June 15, 1888. He married the Princess Victoria of Schleswig-Holstein-Sonderburg-Augustenburg (born 1858), and has had issue:

1. Frederick William, Crown Prince, born 1882, married, June 6, 1905, to Duchess Cecilie of Mecklenburg-Schwerin, and has two sons, William Frederick, born July 4, 1906; and a son born November 9, 1907; 2. William Eitel-Frederick, born 1883, married, February 27, 1906, Princess Sophie Charlotte of Oldenburg; 3. Adalbert, born 1884; 4. August, born 1887; 5. Oscar, born 1888; 6. Joachim, born 1890; 7. Victoria Louise, born 1892.

The Emperor's brother is Prince Henry, born 1862, and married, 1888, to his cousin, Princess Irene of Hesse, daughter of the late Princess Alice of England, and has two sons; and the Emperor has four sisters, all the children of the late Emperor Frederick and the Princess Victoria of England (the Dowager Empress Frederick, who died in 1901). The sisters are:

1. Princess Charlotte, born 1860; married, 1878, to George, hereditary Prince of Saxe-Memingen, and has one daughter.  
2. Princess Victoria, born 1866; married, 1890, to Prince Adolph of Schaumburg-Lippe.  
3. Princess Sophia, born 1870; married, 1889, to Constantine, Crown Prince of Greece, and has three sons and a daughter.  
4. Princess Margaret, born 1872; married, 1893, to Prince Frederick Charles of Hesse, and has five sons.

The Emperor has an aunt, the Princess Louise, born 1838, widow of the late Grand Duke of Baden; and he has a number of cousins, descendants of the brothers and sisters of the Emperor William I. One of these is Princess Margaret, daughter of the late Prince Frederick Charles and wife of the British Duke of Connaught, son of Queen Victoria. The reigning family is descended from Frederick of Hohenzollern, a German count in 980, and Frederick William, the Elector of Brandenburg, 1640-88, whose son became King of Prussia.

## GREECE.

**George I.**, King of the Hellenes, born December 24, 1845, elected King in 1863. He is the brother of the present King of Denmark, Frederick VIII., and brother of the Queen of Great Britain and the Dowager Empress of Russia. He married, 1867, the Grand Duchess Olga, eldest daughter of the Grand Duke Constantine of Russia, grand uncle to the present Emperor. They have had six living children, five sons and one daughter. The eldest son is:

Prince Constantine, born 1868; married, 1889, the Princess Sophia, sister of the present German Emperor, and has three sons, Prince George, born 1890; Prince Alexander, born 1893, and Prince Paul, born 1901, and a daughter, Princess Helen, born 1896.

The King's eldest daughter, Alexandra, married, in 1889, the Grand Duke Paul, uncle of the present Emperor of Russia, and died September 24, 1891, leaving a daughter and a son.

## ITALY.

**Victor Emmanuel III.**, King of Italy, was born November 11, 1869, and is the only son of Humbert I., second King of United Italy, murdered by the Anarchist Bresci at Monza, July 29, 1900. He married, in 1896, Princess Helene, daughter of Nicholas, Prince of Montenegro, and has four children, Princess Iolande, born June 1, 1901, Princess Matalda, born November 10, 1902; Prince Humbert (her apparent), born September 15, 1904, and Princess Giovanna, born November 13, 1907.

Emmanuel, Duke of Aosta, born 1869; is eldest son of the late Prince Amadeus, uncle of present King (and ex-King of Spain); married, 1895, Princess Helene of Orleans, daughter of the late Count of Paris, and they have had issue two children, Amadeus, born 1898, and Almon, born 1900. The three remaining sons of the late Prince Amadeus are Victor, Count of Turin, born 1870; Louis, Duke of Abruzzi, born 1873, and Humbert, Count of Salemi, born in 1889 of his second marriage with his niece, Princess Letitia, daughter of Prince Napoleon Bonaparte and the Princess Clotilde.

The mother of the King is Queen Margherita, daughter of the late Prince Ferdinand of Savoy. She was born 1851, and married the late King 1868.

The following are the aunts of the King:

1. Princess Clotilde, born 1843; married, 1859, to Prince Napoleon Jerome Bonaparte, the late head of the Bonaparte family, and has issue two sons and a daughter, Letitia. (See "Bonapartists.")  
2. Dowager Queen Maria Pia of Portugal, born 1847, and married, 1862, to the late King Louis of Portugal, and has two sons.

The King's great aunt by marriage, the Princess Elizabeth, widow of the Duke of Genoa, has a son (Prince Thomas, Duke of Genoa, married, 1883, Princess Isabella, daughter of Prince Adelbert of Bavaria, and has three sons and two daughters) and a daughter, the latter being the late King Humbert's wife. The family is descended from the Counts of Savoy, who flourished in the Eleventh Century.

## NETHERLANDS.

**Wilhelmina**, Queen of the Netherlands and Princess of Orange-Nassau, born August 31, 1880, daughter of the late King William III and Emma, daughter of Prince George Victor of Waldeck-Pyrmont. She married, February 7, 1901, Duke Henry of Mecklenburg-Schwerin.

The Queen's mother is the late Regent Queen Emma, whose regency lasted from the death of the late King, her husband, November 23, 1890, until the end of the minority of her daughter, August 31, 1898. The Queen's aunt is the Princess Sophia, married to the Grand Duke of Saxe-Weimar. She has a son, Prince Charles, born 1844, and two daughters. This family, known as the House of Orange, is descended from the Princes of Orange, stadtholders during the Dutch Republic.

## NORWAY.

**Hakon VII.**, King of Norway, was before his election to the crown by the Norwegian people in 1905, Prince Charles of Denmark. He is the second son of King Frederick VIII. of Denmark; was born 1872; married, 1896, Princess Maud, third daughter of King Edward VII. of Great Britain, and has one son, Olaf Alexander Edward Christian Frederick, born July 2, 1903.

## PORTUGAL.

**Charles I.**, King of Portugal, born September 28, 1863, son of the late King Louis and his spouse, the Princess Pia, daughter of King Victor Emmanuel of Italy. He succeeded to the throne October 19, 1889. He married, 1896, the Princess Amélie of Orleans, daughter of the Count of Paris, and has two sons, Prince Louis Philippe, Duke of Braganza, born 1887, and Prince Manuel, Duke of Beja, born 1889.

The King has a brother, Prince Alphonse, Duke of Oporto, born 1865, and unmarried; and an aunt married to the Prince of Hohenzollern-Sigmaringen, and has three sons.

The reigning family belongs to the House of Braganza, whose founder was an illegitimate son of King John I. (A. D. 1400) of the old line of Portuguese kings.

## RUSSIA.

**Nicholas II.**, Emperor of Russia, was born May 18, 1868, and succeeded his father, the late Emperor Alexander III., November 1, 1894. He is married to the Princess Alice (Alix) of Hesse-Darmstadt, daughter of the Princess Alice of Great Britain, and has four daughters and one son—Olga, born in 1895; Tatjana, born in 1897; Marie, born in 1899; Anastasia, born in 1901, and Alexis (the Czarevitch), born August 12, 1904.

The late Emperor Alexander III., born in 1845, married, in 1866, the Princess Dagmar, daughter of the present King of Denmark, had issue three sons: 1. Nicholas, the present Emperor; 2. Grand Duke George (the late Czarevitch), born 1871, died 1899; 3. Grand Duke Michael, born December 4, 1878, and two daughters: 1. Grand Duchess Xenia, born April 6, 1875; married, August 6, 1894, her cousin, the Grand Duke Alexander, has four sons and two daughters, and 2. Grand Duchess Olga, born June 13, 1882, married to Prince Peter of Oldenburg. The uncles and aunts of the Emperor are:

1. Grand Duke Vladimir, born 1847; married, 1874, the Princess Marie of Mecklenburg-Schwern, and has three sons and one daughter; Grand Duke Cyril, born in 1876; married, 1905, Melita, second daughter of the late Duke of Coburg and divorced wife of the Grand Duke of Hesse. Grand Duke Boris, who was in America in 1902, is the second son and was born in 1877.

2. Grand Duke Alexis, High Admiral, born 1850. He is unmarried.

3. Grand Duchess Marie, born 1853; married the late Duke of Edinburgh, and has had one son (deceased) and four daughters.

4. Grand Duke Sergius, born 1857; married, 1884, Princess Elizabeth of Hesse-Darmstadt, daughter of Princess Alice of England. Assassinated in 1905, he left no issue.

5. Grand Duke Paul, born 1860; married, 1889, Princess Alexandra, daughter of the King of the Hellenes. She died September 24, 1891, leaving a son, the Grand Duke Demetrius, and a daughter. In 1902 he contracted a morganatic marriage with Olga Pistolkohrs, now Countess Hohenfelsen.

The Emperor has one grand uncle (son of the Emperor Nicholas I.), Grand Duke Michael, born 1832, field marshal in the Russian Army; married, 1857, Princess Cecelia of Baden, and has issue six living children, the eldest daughter, Anastasia, born 1860, being the widow of the Grand Duke of Mecklenburg-Schwern.

A grand uncle, the Grand Duke Constantine, born 1827; died January 12, 1892; married, 1848, Princess Alexandra of Saxe-Altenburg, and had issue five children, the Grand Duke Nicholas, born 1850, being the eldest, and the Grand Duchess Olga, born 1851, the eldest daughter, being married to the King of the Hellenes.

A third grand uncle, the Grand Duke Nicholas, born 1831, field marshal in the Russian Army, died in 1891; married, in 1856, the Princess Alexandra of Oldenburg, and had issue two sons, Grand Duke Nicholas, born 1856, married, 1907, Anastasia, daughter of the present Prince of Montenegro, and sister of Queen Helene, of Italy, and Grand Duke Peter, married, in 1889, Militsa, sister of the preceding.

The Russian reigning family is descended from Michael Romanoff, elected Czar in 1613. The members of the family for over two centuries, however, have married so generally into the German royal houses that the present Romanoffs are practically, by blood, Germans; as much so as their kinsman, the head of the German Empire.

## SAXONY.

**Frederick August.** King of Saxony, born May 25, 1865, succeeded his father, King George, October 15, 1904. He married in 1891 Archduchess Louise of Austria (from whom he was separated in 1903). The King has three daughters and three sons, the Crown Prince being George, born 1893.

The King has two sisters, Mathilde, born 1863, unmarried, and Maria Josepha, born 1867, married to the late Archduke Otto of Austria, and two brothers, Johann Georg, born 1869, married first to Duchess Isabella of Württemberg (died 1904), and in 1906 to Princess Maria Immaculata of Bourbon, and Max, born 1870, a priest in Holy Orders.

A great aunt of the King, Princess Elizabeth, born 1830, married Prince Ferdinand of Sardinia, and after his death in 1856 Marchese Rapallo, who died in 1882. The widow of King Albert, Queen Carola, is also living.

The royal house of Saxony is one of the oldest in Europe, having given an emperor to Germany as early as the beginning of the Tenth Century. The Elector of Saxony assumed the title of King in 1806, and was confirmed therein in 1815.

## SPAIN.

**Alphonso XIII.**, King of Spain, born May 17, 1886, nearly six months after the death of his father, Alphonso XII. His mother is Maria Christina, an Austrian princess. He married in 1906 the English Princess Victoria Eua, daughter of Princess Beatrice, by whom he has a son and heir, Alphonso, Prince of the Asturias, born May 10, 1907. The King has one living sister, the Infanta Maria Theresa, born 1882, his eldest sister, the Princess of Asturias, Maria-de-las-Mercedes, born 1880, wedded in 1901 to Prince Charles of Bourbon-Caserta, having died on October 17, 1904, after giving birth to a daughter, since christened as Infanta Isabel.

The King's aunts are the Infantas Isabella, widow of the Count de Girgenti; Maria, wife of Prince Louis of Bavaria, and Eulalie, wife of Prince Antonio of Orleans (separated from him by deed of separation), who visited the United States and the World's Fair in 1893.

The King's grandmother, ex-Queen Isabella, born in 1830, crowned 1833, abdicated 1870, died April 9, 1904. Her husband, the Infant Francis d'Assisi, born 1822, died in 1902.

The King's grand aunt, the Infanta Louisa, widow of the Duke of Montpensier (son of King Louis Philippe of France), now dead, was the mother of a son and three daughters: 1. The wife of the late Count of Paris, and mother of the French pretender, the Duke of Orleans; 2. The late Queen Mercedes, wife of Alphonso XII., deceased; 3. The Infanta Christina, also deceased.

A second cousin of the King is Don Carlos, born in 1848, and a pretender to the Spanish throne, who is married, and has four daughters and a son, Prince Jaime, born in 1870.

The Spanish reigning family are Bourbons, descendants of King Louis XIV. of France.

SERVIA.

**Peter I.**, King of Servia, born in Belgrade, 1846, son of Alexander Karageorgevic, Prince of Servia from 1842 to 1858. Was proclaimed King on the night of June 10-11, 1903, by the officers of the Servian Army after they had murdered King Alexander and Queen Draga, and was crowned in October, 1904. King Peter I. was married in 1883 to Princess Zorka of Montenegro, who died in 1890. He has two sons and a daughter, George, Alexander and Helen.

King Peter is descended from Karageorge, a peasant, who was the leader of the insurrection against Turkey in 1804. He reigned as Prince of Servia from 1804 to 1813, when he was supplanted by the Obrenovic during a second insurrection.

SWEDEN.

**Oscar II.**, King of Sweden, born January 21, 1829; son of Oscar I., and grandson of Marshal Bernadotte. He married, 1857, the Princess Sophia of Nassau, and has had four sons, the eldest of whom is the Crown Prince Gustavus, born 1858; married, 1881, to the Princess Victoria of Baden, and has three sons, born in 1882, 1884, and 1889, respectively. The eldest son of Prince Gustavus is Prince Gustavus Adolphus, who married in 1905 Princess Margaret of Connaught, and has two sons, born 1906 and 1907. The King's other sons are: Prince Oscar, born 1859, married to Lady Ebba Munck, one of his mother's maids of honor, and relinquished his rights to the throne; Prince Carl, born 1861, and married, 1897, Princess Ingeborg, second daughter of the King of Denmark, and Prince Eugene, born 1865. The King has a niece, Louise, married to the King of Denmark. The royal family comes from Napoleon's Marshal Bernadotte, a Frenchman, who was elected heir-apparent to the crown of Sweden in 1810, and became King in 1818.

WÜRTTEMBERG.

**William II.**, King of Württemberg, born February 25, 1848, succeeded his uncle, King Charles I., October 6, 1891. He married, 1877, Princess Marie of Waldeck, who died, leaving a daughter, Pauline, born 1877, and married, 1898, Prince Frederick of Wied. The King married, second, Princess Charlotte of Schaumburg-Lippe, by whom he has no children. As the King has no male descendants, the heir presumptive is his distant kinsman, Duke Albert, born 1865, married to the Archduchess Margareta, niece of the Emperor of Austria, and has three sons and three daughters.

The King's mother, Princess Catherine, is living, and he has an aunt, Princess Augusta, married to Prince Herman of Saxe-Weimar, with issue of four sons and two daughters. He has a number of cousins, one of them being the late Duke of Teck, who was married to the English Princess Mary of Cambridge, who died in 1897.

## The French Pretenders.

BONAPARTIST.

Of the Emperor Napoleon I. and his brothers Joseph and Louis, male issue is now extinct. The Emperor's brothers Lucien and Jérôme are represented by the following living descendants, and they constitute the present Imperialist house of France:

Prince Victor Napoleon (of the house of Jérôme), born July 18, 1862, is the son of the late Prince Napoleon (who died March 18, 1891) and the Princess Clotilde, sister of the late King Humbert of Italy. The Prince has been recognized by his party as the undisputed head of the Bonaparte family. He lives in Brussels and ismorganatically married, and has had three children. His only brother, Prince Louis Napoleon, born 1864, is a general in the Russian Army, and is unmarried. His sister, Princess Letitia, born 1866, is the widow of Prince Amadeus of Italy, her own uncle, by whom she had a son, Prince Humbert, born 1889.

The late aunt of Prince Victor Napoleon, the Princess Mathilde, born 1820; married, 1840, Prince Demidoff of Russia; died in 1904 without children.

Prince Charles Napoleon, brother of the late Cardinal Bonaparte, who died February 12, 1899, was the last representative of the eldest son of Napoleon's brother Lucien, in the male line. He was born 1839; was married and had two daughters—Marie, wife of Lieutenant Gottl, of the Italian Army, and Eugénie, unmarried. He had three sisters, married respectively to the Marquis of Roccagivonne, Count Primoli, and Prince Gabrelli, who have descendants.

Prince Roland Bonaparte is the only living male cousin of Prince Charles Napoleon. He is a son of the late Prince Pierre Napoleon Bonaparte; was born 1858; married, 1880, the daughter of Blanc, one of the proprietors of the Monte Carlo gambling-hell. His wife died in 1882, leaving him a daughter and a fortune. He has one sister, Jeanne, born 1861, and married to the Marquis de Villeneuve.

Ex-Empress Eugénie, widow of Emperor Napoleon III., was a daughter of Count Cyprien de Montijo, a Spanish grandee, and was born May 5, 1826. She married 1853. Became a widow, 1873. Her only son, Prince Louis Napoleon, was killed in Zululand in 1879.

BOURBON—ORLEANIST.

Philippe, Duke of Orleans, born 1869, succeeded his father, the late Count of Paris, in 1894, as the head of the royal family of France. He married, in 1896, the Archduchess Marie-Dorothea, daughter of the Archduke Joseph, cousin of the Emperor of Austria. His mother (still living) was the Spanish Infanta Louise of Montpensier, and he has one brother, the Duke of Montpensier, and four sisters, Princess Amelle, married to the King of Portugal; Helena, married to the Duke of Aosta, nephew of the late King Humbert of Italy; Isabel, married to the Duke of Guse, son of the Duke of Chartres; and Louise, married to Prince Charles of Bourbon, grandson of King Ferdinand II., of Naples.

The only uncle of the Duke of Orleans is the Duke of Chartres, born 1840, and married to a daughter of the Prince of Joinville. The issue are two daughters and two sons, the eldest son being Prince Henry, born 1867 (died at Saigon, Cochin-China, in 1901); the second, the Duke of Guse; the eldest daughter, Princess Marie, being married to Prince Waldemar of Denmark, and the second daughter, Princess Marguerite, being married (in 1896) to Patrice MacMahon, Duke of Magenta.

The grand uncles of the Duke of Orleans (who were the sons of King Louis Philippe) are all dead. They were the Prince of Joinville, born 1818, died 1900, married to a daughter of Pedro I. of Brazil, and had one daughter and one son, the Duke of Penthièvre, born 1845; Henry, Duke of Aumale, born 1822, died (childless) 1897; Anthony, Duke of Montpensier, born 1824, died 1890 (married, 1852, a sister of Queen Isabella of Spain, and had a daughter, the wife of the Count of Paris, and a son, Prince Anthony, born 1866, who married, 1888, his cousin, the Infanta Eulalie of Spain), and Louis, Duke of Nemours, born 1814, died 1896. He was the father of two daughters, the Princess Crartoryska, deceased, and Princess Blanche of Orleans, and two sons, the eldest being the Count of Eu, born 1842, married to a daughter of Pedro II. of Brazil, and having three children, and the second the Duke of Alençon, born 1844, and married to a Bavarian princess (who was burned in the Paris bazaar fire in 1897), and having two children.

By the death of the Count of Chambord, in 1883, the elder line of the Bourbons of France became extinct, and the right of succession merged in the Count of Paris, grandson of King Louis Philippe, representative of the younger, or Orleans line.

Estimates of area and present population are by Whitaker, and in some cases by the "Statesman's Year-Book," except for British Africa and the late accessions there, which are corrected by Ravenstein's figures. The entire population of the empire, according to the estimates of the "Statesman's Year-Book," is 392,846,835, and the total area, 11,433,283. The East Indian possessions extend over a territory larger than the continent of Europe without Russia; but the North American possessions are greater still, and, inclusive of Hudson's Bay and the great lakes, have a larger area than the whole of Europe. British Africa and Australasia are the next possessions in size.

### PRECEDING SUCCESSION TO THE THRONE.

In the year 1066, Harold, the last of the Saxon kings, being slain in battle, William the Conqueror, as he was afterward called, seized the throne by right of conquest, and the succession passed from him to his second son, William, and then to his third son, Henry I. On the death of the latter a war ensued between his granddaughter Matilda and his nephew Stephen, which resulted in favor of the latter. On Stephen's death the crown reverted to Matilda's son, Henry II., who was succeeded by his second son, Richard I. He dying without children, Henry's fourth son, John, succeeded, who was followed by his son, Henry III. He in turn was followed by his eldest son, Edward I., who was in succession followed by his son and grandson, Edward II. and Edward III. The son of Edward III., dying in his father's lifetime, a grandson, Richard II., succeeded, and in his reign were sown the seeds of the Wars of the Roses, which were afterward to bear such ill fruit.

Richard II. was deposed by Henry IV., who was the eldest son of a younger brother of his father. Henry IV. was succeeded by his son, Henry V., and he by his son, Henry VI., who was deposed by Edward IV., who claimed the throne by right of descent from Lionel, third son of Edward III., and who was an elder brother of John of Gaunt, the father of Henry IV. Edward IV. was succeeded by his son, Edward V., who died an infant, and then by his brother, Richard III., who was slain in the battle of Bosworth Field, fought between him and Henry Tudor, great-great-grandson of John of Gaunt by his third wife, Katherine Swynford. Henry ascended the throne under the title of Henry VII., and married Elizabeth, the daughter of Edward IV., and thus united the two houses of York and Lancaster and put an end to the Wars of the Roses.

Henry VII. was followed by his son, Henry VIII., who was succeeded in turn by his three child-

ren, Edward VI., Mary I., and Elizabeth, at whose death the crown fell to James VI. of Scotland, great-grandson of Margaret, eldest daughter of Henry VII. of England, who ascended the throne of England under the title of James I. On his death his third son ascended as Charles I., but he was beheaded in 1649 by Cromwell, who was made Protector until his death in 1660, when the eldest son of Charles came to the throne as Charles II. and he was followed by his brother, James II. The latter abdicated in 1688, and was succeeded by a nephew, who had married the eldest daughter of James, and the two reigned under their joint names as William III. and Mary II.

On their death James II.'s second daughter, Anne, ascended, and she dying childless the crown fell to the Elector of Hanover, who was grandson of Elizabeth, daughter of James I. of England. This Prince, George I., was succeeded by his son, George II., who was succeeded by his grandson, George III. After a longer reign than any previous English monarch, this king was succeeded by his eldest son, George IV., and by his third son, William IV., both of whom dying childless, the crown fell to Victoria, only child of Edward, fourth son of George III., who ascended the throne in 1837, and she was succeeded on her death by her eldest son, the present sovereign.

#### TITLE AND OATH OF THE KING.

**The Royal Titles Act**, which received the Royal Assent on August 17, 1901, enacted that—  
 "It shall be lawful for His Most Gracious Majesty, with a view to the recognition of His Majesty's Dominions beyond the seas, by His Royal Proclamation under the Great Seal of the United Kingdom, issued within six months after the passing of this act, to make such addition to the style and titles at present appertaining to the Imperial Crown of the United Kingdom and its dependencies as to His Majesty may seem fit."

Mr. Chamberlain, the Secretary for the Colonies, sent the following telegram to Colonial Governors, asking them to vote for the King they preferred. No. 3 was generally approved.

"King Edward's accession offers an opportunity of considering the titles of the Monarch, and I am desirous that the separate and greatly increased importance of the Colonies should be recognized, if possible.

"The following suggestions have been made:—

"First.—'King of Great Britain and Ireland, Emperor of India, and King (or Sovereign) of Canada, Australasia, and all British Dominions beyond the Seas.'

"Second.—'Addition to present title of the words, 'Sovereign Lord or King of the British Realms beyond the Seas.'

"Third.—'Addition to present title of the words, 'King of all the British Dominions beyond the Sea'; without specifying any particular Colony.

"On the whole, I prefer the third suggestion."

On November 4, 1901, the title assumed by His Majesty was "*Edward VII., by the Grace of God of the United Kingdom of Great Britain and Ireland, and of the British Dominions beyond the Seas, King, Defender of the Faith, Emperor of India.*"

#### THE KING'S ACCESSION OATH.

The Accession Oath taken by King Edward, to which so much exception was taken, is as follows:—

"I, Edward, do solemnly and sincerely, in the presence of God, profess, testify, and declare, that I do believe that in the Sacrament of the Lord's Supper there is not any transubstantiation of the elements of bread and wine into the body and blood of Christ at or after the consecration thereof by any person whatsoever; and that the invocation or adoration of the Virgin Mary or any other Saint, and the sacrifice of the Mass, as they are now used in the Church of Rome, are superstitious and idolatrous, and I do solemnly, in the presence of God, profess, testify and declare, that I do make this declaration, and every part thereof in the plain and ordinary sense of the words read unto me as they are commonly understood by English Protestants without any evasion, equivocation, or mental reservation whatsoever, and without any dispensation already granted me for this purpose by the Pope or any other authority, or person whatsoever, or without any hope of any such dispensation from any person or authority whatsoever, or without thinking that I am or can be acquitted before God or man, or absolved of this declaration or any part thereof, although the Pope or any other person or persons or power whatsoever should dispense with or annul the same, or declare that it was null and void from the beginning."

The *revised form of oath* which the Select Committee of the House of Lords suggested for the King's Accession Oath ran thus:—

"I, A. B., by the Grace of God, King (or Queen) of Great Britain and Ireland, Defender of the Faith, do solemnly and sincerely, in the presence of God, profess and testify, and declare that I do believe, that in the Sacrament of the Lord's Supper there is not any transubstantiation of the elements of bread and wine into the body and blood of Christ, at or after the consecration thereof by any person whatsoever. And I do believe that the invocation or adoration of the Virgin Mary or any other Saint, and the sacrifice of the Mass as they are now used in the Church of Rome, are contrary to the Protestant Religion. And I do solemnly, in the presence of God, profess, testify and declare that I do make this declaration and every part thereof unreservedly."

But this amendment was so much criticised that it was withdrawn.

## The British Parliament.

THE supreme legislative power of the British Empire is, by its constitution, vested in Parliament. This body consists of two houses, the Lords and the Commons.

### THE HOUSE OF LORDS.

The House of Lords is composed of the whole Peerage of England and of the United Kingdom, and of certain representatives of the peerages of Scotland and Ireland, but many members of these latter have also English titles which give them seats in the House. The Duke of Buccleuch sits as Earl of Doncaster, and the Duke of Lenster as Viscount Lenster. The House at present consists of 3 Princes of the Blood, 2 Archbishops, 22 Dukes, 23 Marquises, 124 Earls, 40 Viscounts, 24 Bishops, 335 Barons, 16 Scottish Representative Peers elected for each Parliament, and 28 Irish Representative Peers elected for life—in all, 617 members.

The Lord Chancellor of England is always the Speaker of the House of Lords.

\* Land and water included in area. † Alberta and Saskatchewan were erected into provinces in 1905. Mackenzie, Ungava, Franklin, Keewatin, and Northwest Territories are territorial districts. ‡ Included in Mackenzie, Ungava, and Franklin.

High Commissioner in London, England, Lord Strathcona and Mount Royal, G. C. M. G. Salary, \$10,000.

The Dominion of Canada has an area of 3,729,665 (excluding the Hudson Bay, the Gulf of St. Lawrence and all tidal waters) square miles, and comprises one-sixteenth of the land surface of the globe. It is the largest of all the British possessions, Australia, the next in size, containing 2,946,691 square miles. The Government of Canada is Federal, centred at Ottawa, which city is the capital of the Dominion, while the provinces have their respective local Legislatures. The head of the Federal Government is the Governor-General, appointed by the King of Great Britain, and holding office for five years, his salary being paid by the Dominion Government.

The Lieutenant-Governors of the several provinces are appointed by the Federal Government for a term of five years. The Legislatures are elected by the people of each province. The highest Court in the Dominion is the Supreme Court, composed of a Chief Justice and five Judges, each of whom receives a salary of \$9,000 per annum, except the Chief Justice, who is paid an additional \$1,000. From the decisions of this Court the only tribunal to which appeal can be made is to the Judicial Committee of the Imperial Privy Council of Great Britain. The only other Federal Court is the Exchequer Court, presided over by a single Judge, for trying cases connected with the revenue. Salary \$8,000. All others are of a provincial character, limited to jurisdiction in their respective provinces only.

\*The area and population of the newly created Territory of Quintana Roo is included in Yucatan in the table.

The present Constitution of Mexico bears date February 5, 1857, with subsequent amendments. By its terms Mexico is considered a Federative Republic, divided into States, nineteen at the outset, but at present twenty-seven in number, with three Territories and one Federal District, each having a right to manage its own local affairs, while the whole are bound together in one body politic by fundamental and constitutional laws. The powers of the Federal Government are divided into three branches—the legislative, executive, and judicial. The legislative power is vested in a Congress, consisting of a House of Representatives and a Senate; the executive in a President, and the judicial in Federal Courts. Representatives elected by the suffrage of all male adults, at the rate of one member for 40,000 inhabitants, hold their places for two years. The qualifications requisite are to be twenty-five years of age and a resident in the State. The Senate consists of two members from each State, of at least thirty years of age, who hold their places for four years. Senators are elected indirectly, half of them being renewed every two years. The members of both Houses receive salaries of \$3,000 each a year.

The President is elected by electors popularly chosen in a general election and holds office for six years. According to the last Amendment of the Constitution, it does not prohibit his re-election. In case of his sudden disability, the Vice-President, who is also permanent President of the Senate, officiates in his place. Congress has to meet annually, from September 16 to December 15, and from April 1 to May 31, and a permanent committee of both Houses sits during the recesses.

### FINANCE AND COMMERCE.

The Federal revenues collected during the fiscal year ended June 30, 1906, were \$101,972,624; disbursements were \$79,466,912; value of imports year ended June 30, 1905 (gold valuation), \$86,122,293; value of exports, \$208,520,451 (in silver).

### ARMY AND NAVY.

The army consists of infantry, 26,000; engineers, 766; artillery, 2,304; cavalry, 8,454; rural guards of police, 2,365; gendarmere, 250; total, 37,103. There are over 3,000 officers. There are six gun boats with from 1,000 to 1,300 tons, armed with rapid-firing four-inch guns and with rapid-firing six pounders; a transport of 1,600 tons, armed with 57 mm. guns; another transport of 900 tons; two training ships, one of steam, 1,300 tons, armed with 12 cm. and 57 mm., and the other, a sailing ship of 700 tons. There are, also, several small revenue cutters watching the coast on both oceans; a naval school, a navy-yard, and a floating dock at Vera Cruz, and a ship yard at Guaymas.

### NATIONAL DEBT.

The national debt is \$138,838,900 gold, and \$142,116,950 payable in silver.

### INTERNAL IMPROVEMENTS.

Miles of railway in operation, 19,000; miles of telegraph line, 45,000; post-offices, 2,207. This information about Mexico was compiled mainly from the bulletins of the Bureau of American Republics, Washington, D. C.; was corrected to date for the *WORLD ALMANAC* at the Office of the Mexican Embassy at Washington.

For trade with the United States see page 348. For population of Latin-American Republics, see page 599.

The above returns were compiled from the reports of the International Bureau of American Republics.

The Bureau was established at Washington under the recommendation of the Pan-American Conference of 1890, for the purpose of maintaining closer relations of commerce and friendship between the American Republics. At the Pan-American Conference at Mexico in 1901, its scope was enlarged, while at the Third Pan-American Conference held at Rio de Janeiro in 1906 a resolution was passed for its reorganization upon broader lines, so that it should become a world recognized and practical institution for the development of Pan-American commerce and comity.

The list of Directors who have administered the affairs of the Bureau since it was organized is as follows: William E. Curtis, 1890-1893; Clinton Furbish, 1893-1897; Joseph P. Smith, 1897-1898; Frederic Emory, 1898-1899; W. W. Rockhill, 1899-1905; William C. Fox, 1905-1907; John Barrett, 1907.

The general object of the International Bureau is, first, to develop commerce and trade and, second, to promote better relations, closer acquaintance, and more intimate association along intellectual, educational, and social as well as material lines among the American Republics.

The Bureau for commercial purposes is in touch, in both North and South America, on the one hand, with manufacturers, merchants, exporters and importers, doing all it can to facilitate the exchange and building up of trade among the American Nations, and on the other hand, with university and college presidents, professors and students, with writers, newspaper men, scientists and travelers, providing them with a large variety of information that will increase their interest in the different American Nations.

It publishes numerous hand books, pamphlets and maps, a list of which will be forwarded upon application.

The Bureau is also the office or agency, and custodian of archives of the International American Conferences. It has charge of the correspondence relating thereto, the ratification of their resolutions and the issuance of calls for new conferences.

Work will soon be begun on the new building of the Bureau, to be located on the Van Ness Park site, Seventeenth and B Streets, Washington, for which Mr. Andrew Carnegie has given \$750,000 and the different republics \$250,000, making a total of \$1,000,000 available for the new home and grounds of the Bureau.

\* Egypt and the Egyptian Soudan, although nominally under the suzerainty of Turkey, are really controlled by Great Britain, and it is only a matter of time as to when they will be incorporated into the British Empire. Adding Egypt and the Soudan to the Empire would increase the figures above given to 3,207,700 square miles and 50,316,019 population.

The remaining territory of Africa unoccupied is a part of the great Desert of Sahara and the Independent States of Abyssinia and Liberia. Even this territory, except the last, is destined to pass under the power of the Europeans. The tabular figures are from "The Statesman's Year-Book."

\* Population of Greater London (metropolitan and city police districts), 6,581,372. † With suburbs.  
 Note.—The population of Chinese cities other than Canton, Peking, and Shanghai is omitted, because reports respecting it are utterly untrustworthy. There are forty or more Chinese cities whose inhabitants are numbered by rumor at from 200,000 to 1,000,000 each, but no official censuses have ever been taken; and setting aside consideration of the Oriental tendency to exaggeration, there is reason to believe that the estimates of population in many instances covered districts of country bearing the same names as the cities, instead of definite municipalities.

**PROPORTION OF SEXES IN THE UNITED STATES.**

(Extracts from Census Bulletin No. 14.)

**MORE MALES THAN FEMALES IN THE UNITED STATES.**

The whole population of continental United States was first counted with distinction of sex in 1820. During the seventy years from 1830 to 1900 the absolute excess of males was greater at each census than at any preceding census with one exception—that of 1870—when the excess of males was less than in 1830 and 1860.

This reduction of the excess of males between 1860 and 1870, by about 300,000, was doubtless due to the deaths in the Civil War and the diminished immigration during the decade.

The greatest relative excess of males was in 1890, when in each 10,000 people there were 242 more males than females.

By 1900 this excess had decreased to 216 in 10,000, less than the relative excess in 1890 and 1860, but greater than that at each other census.

In continental United States there are 1,638,321 more males than females, or about two in each 100 people.

Probably in the population of the world, as a whole, and certainly in that half of it which has been counted with distinction of sex, there are several millions more males than females.

In continental United States, however, the relative excess of males is greater than the average for all countries.

Europe has an excess of females; every other continent, so far as known, has an excess of males.

The divisions of continental United States with the smallest proportion of males are the District of Columbia (47.4 per cent.), Massachusetts (48.7 per cent.), and Rhode Island (49.1 per cent.); those with the largest are Wyoming (62.9 per cent.), and Montana (61.6 per cent.).

As a rule sparsely settled regions have an excess of males and densely settled regions an excess of females.

**CITIES HAVE MORE FEMALES THAN MALES.**

American cities as a rule have more females than males. In the 1,861 cities, each having in 1900 at least 2,500 inhabitants, there were 201,959 more females than males, and this notwithstanding the many western cities which contained more males than females, and the enormous number of foreign-born in the country, five-ninths of them male, and a large proportion of them living in the cities.

This tendency of American cities to develop a population having a majority of females had increased since 1890, when, in the 1,490 cities, each having at least 2,500 inhabitants, there were 6,929 more males than females.

While the excess of 6,929 males in American cities in 1890 became an excess of 210,959 females in American cities in 1900, the excess of 1,519,559 males in country districts in 1890 became an excess of 1,840,280 males in 1900.

Or, expressing the facts in ratios, of each 1,000 inhabitants of such cities in 1890, 500 were males and in 1900, 497 were males; of each 1,000 inhabitants living outside these cities in 1890, 519 were males, and in 1900 520 were males. The difference thus in the number of males or of females between an average thousand of city and of country population in 1890 was 19, and in 1900, 23.

**WOMEN LIVE LONGER THAN MEN.**

Notwithstanding the great excess of males in the total population of the United States, there are two periods of life at which the reported number of females is greater. One, extending from about eighty-three years of age to the end of life, is probably due mainly to the longer average life of woman; the other, from sixteen to twenty-five, is probably apparent rather than real, and due mainly to the greater number of women who claim, erroneously, to belong to this age period.

In 1900, among the 13,367,147 persons attending school, 499 in each 1,000 were male and 501 female; in 1890, in the same class, 510 per 1,000 were male and 490 female.

**INCREASING PROPORTION OF GIRLS AMONG SCHOOL CHILDREN.**

In all races and in all parts of the country there has been a decided increase since 1890 in the proportion of females among persons attending school. This increase is due mainly to the increase in the proportion of young women among persons at least fifteen years of age attending school, the increase at this age period being nearly five times as great as at any other, and more than three times as great as the average increase for all ages.

**DEATH RATE HIGHER FOR MALES THAN FEMALES.**

The death rate of males in the registration area of the United States in 1900 was 19.0 per 1,000, and that of females 16.6 per 1,000, the former having a death rate higher by about one-seventh than the latter. In the 846 registration cities the death rate of males was 20.0, and that of females 17.2 per 1,000, the male rate exceeding the female by one-sixth. In the rest of the registration area the male death rate was 15.8 and that of females 15.0 per 1,000, the male rate exceeding the female by one-nineteenth.

\*The average size of families was 4.7 persons in 1900, against 5 in 1880 and 5.6 in 1850. Of the 15,963,965 private families in 1900, 14,042,546 had male heads and 1,921,419 female heads.

†Of 7,218,755 persons owning their homes in 1900, 5,064,848 were native whites, 1,730,970 were foreign whites, 372,444 were negroes, 43,219 were Indians, and 2,274 Chinese and Japanese.

The density of population is obtained by dividing the population of each State and Territory and of the United States by its total land area in square miles at each census. In computing density of population for the United States, the areas and population of Alaska and Hawaii in 1900, of Alaska in 1890, and of Indian Territory in 1860, 1870, and 1880 are not considered. The area of Indian reservations, outside of Indian Territory, is included in the area of the States and Territories in which they are severally situated, and in that of the United States, prior to 1890, although the population of these Indian reservations was not ascertained, and, for this reason, cannot be considered in figuring density of population at the censuses prior to 1890.

The density of population of the United States, exclusive of Alaska and Hawaii, according to the Census of 1900, is 25.6—that is, there were in the United States in 1900, on the average, 25.6 inhabitants to the square mile, using land surface only. At the Census of 1790 there were less than 5 inhabitants to the square mile, so that the density of the population of the country has increased in 110 years more than fivefold, although the land area of the country in 1900, exclusive of Alaska and Hawaii, was more than three and one-half times what it was in 1790.

NOTE.—The figures relating to conjugal condition are not absolute, as the statements as to those married and unmarried are not correctly reported, partly through unintentional misstatement and partly through a desire to conceal the facts. For instance, an incorrect return may be made through lack of knowledge, in the case of boarders and lodgers (particularly men) who are reported as single when in fact they are or have been married; or from motives of concealment, in the case of divorced persons who report themselves as single, of couples who have separated but are not legally divorced, or of persons who are not lawfully married.

\* Including all persons in the military and naval service of the United States. † Including all persons of negro descent.

The whole number of persons of school age—that is, from 5 to 20 years of age, inclusive—in 1900 is 26,110,788, of whom 21,573,492 are from 5 to 17 years of age and 4,537,296 from 18 to 20 years of age. These figures include, however, 217,523 persons of school age reported in Alaska, Hawaii, Indian Territory, and on Indian reservations. Eliminating the latter from the account there are native born, 24,689,118; foreign born, 1,204,147; native white (native parents), 14,775,476; native white (foreign parents), 6,371,221; foreign white, 1,193,443; colored, 3,553,125; persons of negro descent, 3,485,188; males, 12,972,994; females, 12,920,271.

The number of males of voting age is 21,329,819, of which there are native born, 16,227,285; foreign born, 5,102,534; native white (native parents), 10,636,893; native white (foreign parents), 3,466,721; foreign white, 4,932,524; colored, 2,293,676; persons of negro descent, 2,065,589.

The ratio of population to males of voting age in the entire country is 3.6. This ratio varies, however, for the several elements of the population, the ratio of negro population to negro males of voting age being 4.3.

AREA.—According to the Census of 1900, the largest county in the United States is Custer County, Montana, which has 20,490 square miles. The smallest is Bristol County, Rhode Island, which has 25 square miles.

\* No enumeration of mulattoes was taken in 1900. The returns of 1890 include quadroons and octoroons. † The whole United States being 100 per cent., the ratios show what proportion of the whole resides in each specified State. ‡ Less than one-tenth of one per cent.

The ten counties in the United States having the largest negro population are, in percentages, Isaquena, Miss., 94.0; Tensas, La., 93.5; Madison, La., 92.7; East Carroll, La., 91.6; Beaufort, S. C., 90.5; Tunica, Miss., 90.5; Washington, Miss., 89.7; Coalhoma, Miss., 88.2; Leflore, Miss., 88.2; Bolivar, Miss., 88.1.

The negro population of cities having the largest number of negroes in 1900 was: Washington, D. C., 86,702; Baltimore, Md., 79,258; New Orleans, La., 77,714; Philadelphia, Pa., 62,613; New York City, 60,686; Memphis, Tenn., 49,910; Louisville, Ky., 39,139; Atlanta, Ga., 35,727; St. Louis, Mo., 35,516; Richmond, Va., 32,230; Charleston, S. C., 31,522; Chicago, Ill., 30,150; Nashville, Tenn., 30,044; Savannah, Ga., 28,090.

More than three-fourths (77.3 per cent.) of the negroes live in the country districts.

Illiteracy among negroes is about seven times as common as among whites.

There are 3,992,337 negroes in Continental United States engaged in gainful occupations.

The death rate of negroes in the registration area in 1900 was 30.2 per cent.; that of whites in the same area was 17.3 per cent.

The proportion of negro children to negro women 15 to 49 years of age was largest in 1880 and smallest in 1900. There has been uniformly a larger proportion of negro children than of white children. That difference more than doubled between 1860 and 1880, but in 1900 it was less than half what it was in 1880 and less than at any other census except 1860.

Though the negroes have a larger proportion of children than the whites, it has been noticed that the whites of the South have a larger proportion than the whites in other sections of the country.

At the two censuses preceding the Civil War, the proportion of children for the two races at the South was substantially the same. The immediate effect of the Civil War and Reconstruction, if the figures of 1870 may be trusted to that extent, was to reduce the proportion of children among Southern whites by about one-eighth, and among negroes by about one twenty-fifth. The following decade saw an increase in the proportion for each race, but as the decrease among the negroes, 1860 to 1870, has been less, so was the increase, 1870 to 1880, greater. But between 1880 and 1900 there was a decrease of 160 in the number of negro children at the South to 1,000 negro women, and a decrease of only 75 white children to 1,000 white women. As a result, in 1900 there were for the first time more white children than negro children at the South to 1,000 women.

The above summary shows that of the 21,329,819 males of voting age in 1900, 19,002,279, or 89.1 per cent, were literate, and 2,327,540, or 10.9 per cent, were illiterate. By "illiterate" is meant all persons who can neither read nor write, or who can read but not write. There is a very large percentage of illiterates among each of the several classes of colored males of voting age, and a considerable proportion also among foreign white males of voting age. Of the two classes of native white males of voting age much the larger proportion of illiterates is found among those of native parentage, 5.8 per cent, of this class of voters being illiterate as compared with 2 per cent, for native white males of voting age who are of foreign parentage.

This table was prepared by the Census Office. The centre of the negro population in 1890 was near Rome, Ga., and was travelling Gulfward.

The centre of area of the United States, excluding Alaska and Hawaii and other recent accessions, is in Northern Kansas, in approximate latitude 39° 55' and approximate longitude 98° 50'. The centre of population is therefore about three-fourths of a degree south and more than thirteen degrees east of the centre of area.

## Women at Work in the United States.

(The Census Bureau issued in 1907 a report presenting statistics of Women at Work.)

In the United States the number of women at work as returned by the census of 1900 was almost five million. In continental United States—by which is meant the United States exclusive of Alaska, Hawaii and all other outlying territories or possessions—the exact number was 4,833,630.

### RACE AND NATIVITY.

The total number includes 1,771,966 native white women whose parents also were natives; 1,090,744 native white women one or both of whose parents were immigrants; 840,011 white women who were themselves immigrants; 1,119,621 negro women, and 11,288 Indian and Mongolian women. Thus the native white women of native parentage constituted 36.7 per cent., or more than one-third, of the total number of women who were breadwinners, the other classes being represented by the following percentages: Native white of foreign parentage, 22.6; foreign born white, 17.4; negro, 23.2; Indian and Mongolian 2-10 of 1 per cent.

### AGE.

Most of the women at work were young women; 68.4 per cent. of them were under 35 years of age, 44.2 per cent. were under 25, and 25.6 per cent. had not reached the age of 21. These figures are in marked contrast with those for the male sex. Of the men 16 years of age and over reported as workers or breadwinners, only 24.7 per cent. were under the age of 25, and only 12.7 per cent. were under 21. This contrast is indicative of the fact that large numbers of women who support themselves and others in early life cease to be breadwinners upon assuming the responsibilities of marriage and childbearing.

### MARITAL CONDITION.

This conclusion is substantiated by the statistics of marital or conjugal condition. Almost two-thirds, or 65 per cent., of the total number of women at work were single, while 15.9 per cent. were married, 17.7 per cent. were widows and 1.3 per cent. were divorced.

### PROPORTION OF WOMEN AT WORK.

The total number of women 16 years of age and over in continental United States in 1900 was 23,485,559. The number at work constituted 20.6 per cent. of this total. In other words, one woman in every five was a breadwinner, that term being used to designate persons reported by the Census as following a gainful occupation. Of the total male population of the same age—that is, 16 years and over—90.5 per cent. were breadwinners. This difference between the sexes as regards the percentage of breadwinners is probably not greater than would be anticipated. Men take up some occupation almost as a matter of course, and usually follow it the greater part of their lives. With women the adoption of an occupation, although by no means unusual, is far from being customary, and in the well-to-do classes of society is exceptional. Moreover, the pursuit of an occupation by women is probably more often temporary than permanent.

### OCCUPATIONS OF WOMEN.

In the reports of the Twelfth Census (1900), the detailed classification of breadwinners with respect to the kind of work in which they were engaged distinguishes 303 occupations.

Notwithstanding the increasing diversity of employments for women, domestic service still remains the most important by far of the occupations in which they are engaged. Of the 4,833,630 women in continental United States reported as engaged in gainful occupations at the time of the Twelfth Census, 1,124,383, or almost one-fourth of the total number, were returned as servants. It may seem surprising that the next most important occupation for women is that of farm laborer, and that the number of women reported as following this occupation was 456,405, or almost half a million. The significance of these figures will be better understood if it is pointed out that 442,006, or 96.8 per cent. of these female farm laborers were reported from the Southern States, and that 361,804, or 79.3 per cent. of the total number, were of the negro race. Moreover, it appears that 277,727, or 60.9 per cent. of the total number, were members of the farmers' families, representing the wives and grown-up daughters, assisting in the work on the home farms. Next to these two leading occupations come four occupations not far apart in numerical importance, though widely different in character. They are the occupations of dressmaker, laundress, teacher and farmer. The largest of these occupations—that of dressmaker—employed 338,144 women, and the smallest—that of farmer—employed 307,706. Of teachers, there were 827,206; of laundresses, 328,935.

Three-fifths of the total number of women reported as breadwinners were found in the six occupations employing more than 300,000 women each, the aggregate number in these occupations being 2,882,779. The total number of women reported as textile mill operatives—231,458—makes this the seventh occupation group in numerical importance. The occupation next in rank is that of housekeepers and stewardesses. This comprised 146,929 women. The housekeepers here referred to are those working for wages, the housekeeping or housework done by women in their own homes not being treated by the Census as a gainful occupation, although it has, of course, a great economic importance, not to be overlooked in any attempt to estimate the social value of woman's work. If there are added to the occupation groups already mentioned the group of saleswomen, comprising 142,265 women, and that of seamstresses, comprising 138,794, the list includes the ten leading occupations for women, and accounts for 3,542,155, or 73.3 per cent. of the total number of women who are breadwinners.

Teaching is also an occupation in which women predominate. The occupation is one in which both sexes have long been competing on terms of approximate equality, and it is significant that it is also one in which the predominance of women is increasing. In 1880, the percentage of female teachers was 67.8; it advanced to 70.8 in 1890, and to 73.4 in 1900. In the group of textile mill operatives the two sexes were represented in about equal numbers. But in the remaining three of the ten leading occupations mentioned above, women, though numerous, were in the minority, constituting 24.1 per cent. of the total number of salesmen and saleswomen, 13.6 per cent. of the farm laborers and only 6.4 per cent. of the farmers.

Ninety-four per cent. of the foreign-born population is resident in the Northern and 6 per cent. in the Southern States.

Of the population in the United States, in 1900, 34.3 per cent. was of wholly or partial foreign parentage. This includes 13.7 per cent. of foreign born.

## Finances of Largest Cities

The Census Office under date of October 4, 1907, issued a Bulletin presenting official statistics relating to the finances of cities having a population of over 30,000. This Bulletin summarized the contents of the annual report of the Census Office and covered the year 1905.

### POPULATION AND AREA.

The number of cities included in this report is 154, of which 15 had over 300,000 inhabitants, 25 between 100,000 and 300,000, 47 between 50,000 and 100,000, and 67 under 50,000. Of the 154 cities, New York had the largest land area—209,218 acres; New Orleans stood second, with 125,600; Chicago third, with 117,447; Philadelphia fourth, with 81,828, and Duluth fifth, with 40,556. The five cities named were the only ones with over 40,000 acres of land surface. Six cities had over 30,000 acres and less than 40,000. They are St. Louis, Mo., Washington, D. C., Denver, Colo., Des Moines, Iowa; St. Paul and Minneapolis, Minn., with areas in the order named. The other cities covering over 20,000 acres were, in the order of decreasing areas: San Francisco, Cal., Salt Lake City, Utah; Taunton, Mass., Sioux City, Iowa; Los Angeles, Cal., Cincinnati, Ohio; Buffalo, N. Y.; Cleveland, Ohio; Boston, Mass., Springfield, Mass., Portland, Ore., Worcester, Mass., Superior Wis., Detroit, Mich., San Antonio, Texas; Fall River, Mass., Wichita, Kans., Manchester, N. H.; Seattle, Wash., and Haverhill, Mass.

The city having the smallest land area was Hoboken N. J., with 825 acres. There is often great disproportion between the area covered by a city and the number of its inhabitants. Duluth, Minn., with 64,942 inhabitants, takes in more territory than St. Louis, with its 636,973; Salt Lake City, with a population of 6,554 less than Hoboken, includes an area thirty-five times as great. Of the cities containing over 100,000 population, Allegheny, Pa., had the smallest land area—4,726 acres. Paterson, N. J., had the next smallest—5,157 acres; St. Joseph, Mo., the next—6,240 acres; Atlanta, Ga., the next—7,680; Jersey City, N. J., the next—8,320, and Memphis, Tenn., the next—9,772 acres.

### COSTS OF GOVERNMENT.

The costs of government to the taxpayer were represented approximately for the several cities by what the Bureau of the Census calls "corporate payments." These payments exclude all temporary transactions and payments of one department or fund of the city to another. For the 154 cities they aggregated, in the fiscal year 1905, \$572,960,113, of which those of New York City constituted \$164,493,177, or 28.7 per cent.

Of the 154 cities whose statistics were presented in this special report, the Census had secured and presented in previous reports and bulletins of 1902, 1903 and 1904, the statistics of 148. The corporate payments for these cities for the four years, 1902 to 1905, were as follows: \$468,747,556, \$522,699,016, \$553,229,200 and \$569,503,687. The corporate payments or costs of government for these 148 cities for 1903, 1904 and 1905 were 11.5, 18 and 21.5 per cent greater, respectively, than for 1902. The corresponding payments for New York City in the four years mentioned were \$129,095,546, \$156,886,282, \$167,060,171 and \$164,493,177.

Of the total corporate payments of these 154 cities, 66.6 per cent. were for the current expenses of operation and maintenance, including the support of the departments and industries; 32.1 per cent. were for outlays, or improvements of a more or less permanent character; and 1.3 per cent. were for reduction of indebtedness. The corresponding percentages for the cities investigated in 1902 were 71.2 for expenses, 27.3 for outlays and 1.5 for reduction of debt. The relative increase of payments in the four years was, therefore, somewhat greater for permanent improvements than for mere expenses of operation and maintenance.

Of cities with an estimated population of over 300,000, the per capita corporate payments were largest in Boston and smallest in Milwaukee. Next in order, after Boston, were New York and Washington; and of the cities with small relative cost of government, New Orleans, Detroit and Chicago are close rivals with Milwaukee.

Of the payments for general expenses, 61.8 per cent. were for salaries and wages, and 38.2 per cent. were for other purposes. In 1904 the corresponding percentages were 61.7 and 38.3, respectively. The per cents. of the total expenses formed by those of the principal departments or branches of service were as follows: Schools, 25.9; Police Department, 12.7; highways, 10.8; interest on public debt, 10.1; Fire Department, 9.5; general government, 9; sanitation, including costs of Health Department, sewers, etc., 8.8; charities, 5.7; recreation, including parks, 3; miscellaneous protection of life and property, 1.7; libraries, 1.2, and other unclassified, 1.6.

### RECEIPTS.

During the fiscal year 1905 the corporate receipts for the 154 cities were \$575,814,774. The corresponding receipts for the 148 cities for which the Bureau of the Census secured reports for the years 1902 to 1905 were as follows: \$476,668,975, \$528,586,954, \$588,611,566 and \$572,404,512. It is to be noted that these receipts were largest in 1904, and smallest in 1902. As compared with 1902, the receipts were greater by 10.9 per cent. in 1903, by 23.5 per cent. in 1904 and 20.1 per cent. in 1905.

Of the corporate receipts of the 154 cities in 1905, 66.5 per cent. were derived from general revenues, including taxes, licenses and kindred sources; 20.7 per cent. from commercial revenues, including those from quasi private industries, and receipts in fees, charges, etc., for services performed, and 12.8 per cent. from loans which increased city indebtedness. The corresponding percentages for 1902 were 68.3, 19.3 and 12.4. These percentages indicate a slight tendency for the receipts from commercial revenues and from loans to increase faster than those from general revenues, or from taxation.

Of the commercial revenues, the most important were those derived from quasi private industries operated by cities. Of these industries, city water-works take the first place, and docks and wharves the second. The total municipal income from water-works in 1905 was \$47,657,957, of which amount New York City received \$9,748,870. The aggregate

receipts from docks and wharves were \$3,458,658, of which amount New York City received \$3,097,950.

Of the general revenue receipts, \$309,441,271 were derived from general property taxes and from penalties for delayed payment thereof; \$9,856,382 were from special property and business taxes; \$1,063,922 from poll taxes, and \$37,032,593 from licenses and permits, of which amount \$29,616,245 were derived from liquor licenses and taxes. The amount of \$2,875,882 was received from fines and forfeits; \$24,029,267 from subventions and grants from other civil divisions and from private donations and gifts, and \$194,018 was obtained from miscellaneous sources.

## MUNICIPAL QUASI PRIVATE INDUSTRIES.

The report presented a number of tables relating to the operation of quasi private industries by the 154 cities. Among those tables was one giving detailed data relating to the value, indebtedness, earnings, costs of operation and earning capacity of the water-works of the several cities. The table showed the earning capacity of these water-works on three different bases: (1) Excess of actual receipts from the public over the actual payments for operating expenses; (2) excess of the actual receipts from the public, plus an estimated charge for the value of water used by the city for public purposes, over the actual payments for operating expenses, plus an allowance of 3 per cent. of the value of the plant—this allowance being for depreciation and Sinking Fund provisions, and (3) excess of the receipts, etc., as in (2), over the costs and allowance given in (2), plus an estimate of the taxes which the city would have received had the industry been operated as a private enterprise. On the three bases, as above described, there was computed the principal which would produce the resulting excess of receipts if that principal earned the rate per cent. which the individual city pays on its outstanding indebtedness.

The total reported present value of water-works in these 154 cities was \$535,957,239; the outstanding indebtedness incurred by reason of water-works was \$270,733,611. The earning capacity on the basis first described was \$593,858,775; on the basis described under (2) it was \$354,170,467; while on the basis last described it was only \$199,263,378. A few cities showed no earning capacity on any of these bases, and only a very few showed such capacity, on the third basis, equal to the cost, or even to the reported valuation of the plant. Among the cities last referred to was New York, with water-works which were reported to have cost \$139,085,000, and whose present value was returned as \$74,672,087; these water-works had an earning capacity on basis (1) of \$195,592,617, on basis (2) of \$151,876,794, and on basis (3) of \$119,043,029. Another such city was Chicago, with water-works whose cost and present value were both reported as \$39,099,256; these water-works had an earning capacity on basis (1) of \$62,569,250, on basis (2) of \$46,267,925, and on basis (3) of \$42,172,250.

The reports stated that a great difficulty was experienced in obtaining comparative statistics of the cost of quasi private industries, principally because of the lack of uniformity in the methods of public accounting. Scarcely any two industries are operated with the same concept of the end to be obtained or the results to be secured in order that the management may be called a success.

The value of all properties of quasi private industries at the close of the fiscal year 1905 was \$831,368,707. The outstanding indebtedness on their account was reported as \$445,572,406, showing that, taken as a whole, the 154 cities had earned from revenues nearly one-half of the costs of these industrial plants. This large relative payment for the plants of quasi private industries, and the small relative amount of bonded indebtedness by reason of their establishment, is in marked contrast to the condition of affairs among the larger cities of Great Britain.

## CITY DEBT.

The total indebtedness of the 154 cities in 1905 was \$1,618,414,005, of which \$1,444,725,797 was classed as "funded" and the remainder as "floating." Of that remainder, \$75,494,792 was classed as "revenue or tax loans"; \$77,982,998 as "special assessment loans"; \$18,950,122 as "outstanding warrants," and \$1,260,296 as "miscellaneous obligations." Of the aggregate indebtedness thus reported by the 154 cities, \$1,521,630,914 was incurred by the city government, \$36,822,609 by independent school districts for the same territory as the city, and \$59,960,482 by civil divisions having such similar territory and also authorized to incur debt.

The total indebtedness of the 148 cities for which reports were received for the years 1902 to 1905 was \$1,297,735,510 in 1902; \$1,396,421,820 in 1903; \$1,528,724,360 in 1904, and \$1,610,074,280 in 1905.

The indebtedness, less Sinking Fund assets, for these 148 cities for the years mentioned was \$1,026,223,373, \$1,106,327,124, \$1,225,851,090 and \$1,290,673,632. In four years the population of these cities increased 7.9 per cent., while the indebtedness, less Sinking Fund assets, increased 25.8 per cent., or more than three times the per cent. of increase of population. As a result, the per capita net indebtedness, which was \$51.14 in 1902, had risen to \$58.48 in 1905.

## COSTS OF MAINTAINING PUBLIC SCHOOLS.

The report presents a table showing the costs of maintaining free public schools for the several cities, including in such costs the interest on investments in school buildings and grounds. The relative investments of the cities in school property may be noted by the varying amounts allowed for interest on such investments. These varied from 7 cents per capita in Charleston, S. C., and 22 cents in Atlanta, Ga., to \$1.33 in Denver, Colo., \$1.35 in Pueblo, Colo., \$1.43 in Newton, Mass., and \$1.53 in Spokane, Wash. In like manner the aggregate per capita costs of maintaining schools, including the foregoing allowance for interest, varied from \$1.57 in Charleston, S. C., \$1.96 in Knoxville, Tenn., and \$1.98 in Montgomery, Ala., to \$7.22 in Boston, Mass., \$7.90 in Newton, Mass., \$8.40 in Spokane, Wash., and \$8.67 in Pueblo, Colo. A part of the great variation is due to incorrect estimates of the value of school property and, in the case of the two cities last mentioned, to a probable low estimate of city population.

## National Municipal and Civic Organizations.

### NATIONAL MUNICIPAL LEAGUE.

*President*—Charles J. Bonaparte, Baltimore, Md. *First Vice-President*—Charles Richardson, Philadelphia. *Second Vice-President*—Thomas N. Strong, Portland, Ore. *Third Vice-President*—Hon. Henry L. McCune, Kansas City, Missouri; *Fourth Vice-President*—Walter L. Fisher, Chicago, Ill. *Fifth Vice-President*—Hon. James Phinney Baxter, Portland, Me. *Secretary*—Clinton Rogers Woodruff, 121 South Broad Street, Philadelphia. *Treasurer*—George Burnham, Jr., Philadelphia. *Executive Committee*—Chairman, Horace B. Deming, New York; Albert Bushnell Hart, Cambridge, Mass.; Robert Treat Paine, Jr., Boston; Charles S. De Forest, New Haven, Ct.; Dudley Tibbets, Troy; George Haven Putnam, New York; Charles W. McCandless, New York; Charles H. Ingersoll, New York; William G. Low, New York; Frederick Almy, Buffalo; Hon. Thomas M. Osborne, Auburn; Clarence L. Harper, Philadelphia; Thomas Raeburn White, Philadelphia; J. Horace McFarland, Harrisburg, Pa.; Hon. George W. Guthrie, Pittsburgh; Oliver McClintock, Pittsburgh; Prof. Harry A. Garfield, Princeton, N. J.; W. P. Baucroft, Wilmington, Del.; Charles Morris Howard, Baltimore; H. B. F. Macfarland, Washington; Elliott Hunt Pendleton, Cincinnati; Hon. L. E. Holden, Cleveland; Morton D. Hull, Chicago; J. L. Hudson, Detroit; John A. Butler, Milwaukee; David P. Jones, Minneapolis; Dwight F. Davis, St. Louis; Frank N. Hartwell, Louisville; Percy N. Booth, Louisville; E. C. Kontz, Atlanta; James H. Causey, Denver; Frank J. Symmes, Berkeley; Charles D. Willard, Los Angeles; Erastus Brainerd, Seattle; Harvey S. Chase, Boston, and the officers. The League is composed of associations formed in cities of the United States, and having as an object the improvement of municipal government. It has no connection with State or national parties or issues, and confines itself strictly to municipal affairs. Any association belonging to the League may withdraw at any time.

### LEAGUE OF AMERICAN MUNICIPALITIES.

*President*—J. Barry Mahool, Baltimore, Md.; *First Vice-President*—Silas Cook, East St. Louis, Ill.; *Second Vice-President*—Horace Wilson, Wilmington, Del.; *Third Vice-President*—Emerson Coatsworth, Toronto, Ont.; *Fourth Vice-President*—Henry M. Beardsley, Kansas City, Mo. *Secretary-Treasurer*—John MacVicar, Des Moines. *Trustees*—Wm. J. Hosey, Ft. Wayne, Ind.; W. H. Arnett, Kokomo, Ind.; E. F. Brush, Mt. Vernon, N. Y.; Hugo Grosser, Chicago; George T. Gastop, Detroit, W. H. Joyner, Atlanta; Henry Hudson, Hudson, N. Y.

The objects of the League of American Municipalities are as follows—The general improvement and facilitation of every branch of municipal administration by the following means: First—The perpetuation of the organization as an agency for the co-operation of American cities in the practical study of all questions pertaining to municipal administration. Second—The holding of annual conventions for the discussion of contemporaneous municipal affairs. Third—The establishment and maintenance of a central bureau of information for the collection, compilation, and dissemination of statistics, reports, and all kinds of information relative to municipal government. The membership of the League includes nearly all of the important cities in this country and Canada.

### NATIONAL GOOD ROADS ASSOCIATION.

*President*—W. H. Moore, St. Louis, Mo. *Secretary*—Arthur E. Jackson, Damariscotta, Me., with vice-presidents representing each State and Territory. This Association was organized by delegates from thirty-eight States in national convention at Chicago, November 21, 1900, and an extensive campaign for good roads all over the Union is in progress.

### AMERICAN CIVIC ASSOCIATION.

*President*—J. Horace McFarland, Harrisburg, Pa. *First Vice-President and Secretary*—Charles Clinton Rogers, North American Building, Philadelphia. *Vice-Presidents*—George B. Leighton, Mountainock, N. H.; Robert Watchorn, New York; L. E. Holden, Cleveland; Fielding J. Silson, Los Angeles, *Department Vice-Presidents*—Arts and Crafts, Mrs. M. F. Johnston, Richmond, Ind.; Children's Gardens, Miss Mary M. Butler, Yonkers, N. Y.; City Making, Frederick L. Ford, Hartford, Ct.; Factory Betterment, Mrs. George F. French, Portland, Me.; Libraries, Miss Mary E. Ahern, Chicago; Outdoor Art, Warren H. Manning, Boston; Public Recreation, Charles V. Garfield, Grand Rapids, Mich.; Press, R. E. Watrous, Milwaukee; Parks and Public Reservations, Henry A. Barker, Providence; Public Nuisances, Harlan P. Kelsey, Salem, Mass.; Railroad Improvement, Mrs. A. E. McCrea, Chicago; Rural Improvements, D. Ward King, Maitland, Mo.; School Extension, O. J. Kern, Rockford, Ill.; Social Settlements, Graham Romeyn Taylor, Chicago; Woman's Outdoor Art League, Mrs. Agnes McGiffert Pound, Ashtabula, Ohio. *Treasurer*—William B. Howland, New York.

The American Civic Association was formed by merger of the American League for Civic Improvement and the American Park and Outdoor Art Association, June 10, 1904. The Association seeks to combine and make efficient the country-wide effort for civic betterment. It has led in the effort to prevent the destruction of Niagara Falls for power purposes; it advocates rational forest treatment, it is inaugurating a campaign for the restraint and reduction of objectionable outdoor advertising as a defacement of nature, and it urges community beauty. It fosters parks, playgrounds, and outdoor recreation; it arouses communities, and leads them toward betterment. A lantern-slide service is maintained, and many bulletins are issued.

### SOCIETY OF BUILDING COMMISSIONERS AND INSPECTORS.

*President*—G. U. Hemburger, Commissioner of Buildings, St. Louis. *Secretary*—F. W. Fitzpatrick, 4200 Fourteenth Street Road, Washington, D. C. The International Society of State and Municipal Building Commissioners and Inspectors is organized by the building inspectors of the cities of the United States and Canada to promote "the improvement of building methods; the revision and perfecting of building ordinances and securing their more thorough enforcement; the lessening of our appalling fire losses; mutual assistance, the interchange of ideas, and the binding in closer union of the building bureaus of the several cities with the view of ultimate uniformity of building laws."

### INTERNATIONAL REFORM BUREAU.

International Reform Bureau, 206 Pennsylvania Avenue, S. E., Washington, D. C. *President*—Rev. J. G. Butler, D. D. *Superintendent and Treasurer*—Dr. Wilbur F. Crafts. Devoted to the repression of intemperance, impurity, Sabbath-breaking, gambling, and kindred evils, by lectures, letters, legislation, and literature. The Bureau has drawn twelve laws that have passed Congress.

GOVERNMENT OF THE DISTRICT OF COLUMBIA.

The municipal government of the District of Columbia is vested by act of Congress approved June 11, 1878, in three Commissioners, two of whom are appointed by the President from citizens of the District having had three years' residence therein immediately preceding that appointment, and confirmed by the Senate. The other Commissioner is detailed by the President of the United States from the Corps of Engineers of the United States Army, and must have lineal rank senior to Captain, or be a Captain who has served at least fifteen years in the Corps of Engineers of the Army. The Commissioners appoint the subordinate official service of said government, except the Board of Education which is appointed by the Supreme Court of the District of Columbia. The present Commissioners are H. B. F. Macfarland (Republican), President, whose term will expire May 5, 1909; Henry L. West (Democrat), whose term will expire February 1, 1909; Major John Biddle (non-partisan), Corps of Engineers, United States Army, detailed during the pleasure of the President of the United States, Secretary William Tindall. Offices of Commissioners, 464 Louisiana Ave., N. W., Washington, D. C.  
 Three separate local governments existed in the District of Columbia from its establishment until 1871, namely: the City of Washington, the Town of Georgetown, and the Levy Court. The latter had jurisdiction over the portion of the District of Columbia outside of the city and town mentioned. All three of these governments were abolished by an act of Congress approved February 21, 1871, which provided a territorial form of government for the entire District of Columbia, with a Governor, Secretary, Board of Public Works, and Council, appointed by the President of the United States, and a House of Delegates and a delegate in Congress elected by the citizens of said district. This form of government was abolished June 20, 1874, and a temporary government by three Commissioners substituted. The latter form was succeeded by the present form July 1, 1878. Congress makes all laws for the District, but has intrusted to the Commissioners authority to make police, building, and plumbing regulations, and others of a municipal nature.

### The United States Revenue Cutter Service.

THE United States Revenue Cutter Service is a military arm of the Government attached to and under the direction of the Treasury Department. The Service was organized in 1790 and constituted the original naval force of the country. There being at that time no Navy Department the Service was placed under the Treasury Department, where it has remained ever since. It is charged with the enforcement of the navigation and customs laws of the United States, the assistance of vessels in distress, the protection of the sealing industry in Alaska, the enforcement of the quarantine laws, and numerous other duties appropriate to its class of vessels. Each Winter, by direction of the President, a number of the cutters patrol the coast for the special purpose of assisting vessels in distress. The Service co-operates with the Navy when directed by the President and has so co-operated in every war in which the United States has been engaged. The officers of the Service are commissioned by the President and hold rank by law with officers of the Army and Navy as follows: Captains with Majors in the Army and Lieutenant-Commanders in the Navy; First Lieutenants with Captains in the Army and Lieutenants in the Navy; Second Lieutenants with First Lieutenants in the Army and Lieutenants (Junior Grade) in the Navy; Third Lieutenants with Second Lieutenants in the Army and Ensigns in the Navy.

There are now in the Service 220 commissioned officers and cadets on the active list, and 1,250 petty officers and enlisted men. The officers are: 37 Captains, 37 First Lieutenants, 37 Second Lieutenants, 5 Third Lieutenants, 33 Cadets of the line, 34 Chief Engineers, 17 First Assistant Engineers, 11 Second Assistant Engineers, 6 Cadet Engineers, 2 Constructors, and 1 Surgeon.

Commissioned officers of the line are appointed from Cadet graduates of the School of Instruction at South Baltimore, Md. The Cadet course covers three years and embraces professional and academic subjects. Cadets are appointed after competitive examinations, conducted by boards of commissioned officers of the Revenue Cutter Service. Candidates must be not less than eighteen nor more than twenty-four years of age.

Appointments to the Engineer Corps are made after competitive examination, and successful candidates are appointed Cadet Engineers for a period of six months prior to being commissioned Second Assistant Engineers in the Service. Candidates for the Engineer Corps must be not less than twenty-one nor more than twenty-six years of age.

The commandant of the Service is detailed from among the Captains by the Secretary of the Treasury. The present Chief of the Service is Captain Worth G. Ross, U. S. R. C. S. The Engineer-in-Chief is Chief Engineer, C. A. McAllister, U. S. R. C. S.

### The Life-Saving Service.

THE ocean and lake coasts of the United States are picketed with the stations of the Life-Saving Service attached to the United States Treasury Department. Sumner I. Kimball is general superintendent, with headquarters at Washington, and there is a corps of inspectors, superintendents, station keepers, and crews, extending over the entire coast line, together with a Board on Life-Saving Appliances, composed of experts selected from the Revenue Marine Service, the Army, the Life-Saving Service, and civilians.

At the close of the last fiscal year the life-saving establishment embraced 278 stations, 200 being on the Atlantic Coast, 60 on the lakes, 17 on the Pacific Coast, and 1 at the falls of the Ohio, Louisville, Ky. In the following table are the statistics of the service:

### United States Military Academy at West Point.

EACH Senator, Congressional District, and Territory—also the District of Columbia, Porto Rico and Alaska—is entitled to have one cadet at the Academy. There are also forty appointments at large, specially conferred by the President of the United States. The number of students is thus limited to 523.

Appointments are usually made one year in advance of date of admission, by the Secretary of War, upon the nomination of the Senator or Representative. These nominations may either be made after competitive examination or given direct, at the option of the Representative. The Representative may nominate two legally qualified second candidates, to be designated alternates. The alternates will receive from the War Department a letter of appointment, and will be examined with the regular appointee, and the best qualified will be admitted to the Academy in the event of the failure of the principal to pass the prescribed preliminary examinations. Appointees to the Military Academy must be between seventeen and twenty-two years of age, free from any infirmity which may render them unfit for military service, and able to pass a careful examination in reading, writing, spelling, English grammar, English composition, English literature, arithmetic, algebra through quadratic equations, plane geometry, descriptive geography and the elements of physical geography, especially the geography of the United States, United States history, the outlines of general history, and the general principles of physiology and hygiene.

The course of instruction, which is quite thorough, requires four years, and is largely mathematical and professional. The principal subjects taught are mathematics, English, French, drawing, drill regulations of all arms of the service, natural and experimental philosophy, chemistry, chemical physics, mineralogy, geology, electricity, history, international, constitutional, and military law, Spanish, civil and military engineering, art and science of war, and ordnance and gunnery. About one-fourth of those appointed usually fail to pass the preliminary examinations, and but little over one-half the remainder are finally graduated. The discipline is very strict—even more so than in the army—and the enforcement of penalties for offences is inflexible rather than severe. Academic duties begin September 1 and continue until June 1. Examinations are held in each December and June, and cadets found proficient in studies and correct in conduct are given the particular standing in their class to which their merits entitle them, while those cadets deficient in either conduct or studies are discharged.

From about the middle of June to the end of August cadets live in camp, engaged only in military duties and receiving practical military instruction. Cadets are allowed but one leave of absence during the four years' course, and this is granted at the expiration of the first two years. The pay of a cadet is \$609.50 per year, and, with proper economy, is sufficient for his support. The number of students at the Academy is usually about four hundred and seventy.

Upon graduating cadets are commissioned as second lieutenants in the United States Army. The whole number of graduates from 1802 to 1906, inclusive, has been 4,642. It is virtually absolutely necessary for a person seeking an appointment to apply to his Senator or Member of Congress. The appointments by the President are usually restricted to sons of officers of the army and navy, who, by reason of their shifting residence, due to the necessities of the service, find it next to impossible to obtain an appointment otherwise. The Superintendent is Colonel Hugh L. Scott, U. S. A., and the military and academic staff consists of 101 persons. Capt. Joseph S. Herron, 2d Cavalry, is adjutant. A list of the Superintendents of the Military Academy since its foundation will be found on page 557.

### United States Naval Academy at Annapolis.

The students of the Naval Academy are called Midshipmen. Two Midshipmen are allowed for each Senator, Representative, and Delegate in Congress, two for the District of Columbia, and five each year from the United States at large. The appointments from the District of Columbia and five each year at large are made by the President. One Midshipman is allowed from Porto Rico, who must be a native of that island. The appointment is made by the President, on the recommendation of the Governor of Porto Rico. The Congressional appointments are equitably distributed, so that as soon as practicable each Senator, Representative, and Delegate in Congress may appoint one Midshipman during each Congress. The course for Midshipmen is six years—four years at the Academy, when the succeeding appointment is made, and two years at sea, at the expiration of which time the examination for graduation takes place. Midshipmen who pass the examination for final graduation are appointed to fill vacancies in the lower grade of the Line of the Navy, in the order of merit as determined by the Academic Board of the Naval Academy. The act of June 29, 1906, prescribes that the Secretary of the Navy shall as soon as possible after June 1 of each year preceding the graduation of midshipmen in the succeeding year, notify in writing each Senator, Representative, and Delegate in Congress of any vacancy that will exist at the Naval Academy because of such graduation, and which he shall be entitled to fill by nomination of a candidate and one or more alternates therefor. The nomination of a candidate and alternate or alternates to fill said vacancy shall be made upon the recommendation of the Senator, Representative, or Delegate, if such recommendation is made by March 4 of the year following that in which said notice in writing is given, but if it is not made by that time the Secretary of the Navy shall fill the vacancy by appointment of an actual resident of the State, Congressional District, or Territory, as the case may be, in which the vacancy will exist, who shall have been for at least two years immediately preceding the date of his appointment an actual and bona fide resident of the State, Congressional District, or Territory in which the vacancy will exist, and of the legal qualification under the law as now provided. Candidates allowed for Congressional Districts, for Territories, and for the District of Columbia must be actual residents. Candidates at the time of their examination must be physically sound, well formed, and of robust constitution. Attention will also be paid to the stature of the candidate, and no one manifestly under size for his age will be received at the Academy. The height of candidates for admission shall not be less than 5 feet 2 inches between the ages of 16 and 18 years, and not less than 5 feet 4 inches between the ages of 18 and 20 years; and the minimum weight at 16 years of age shall be 100 pounds, with an increase of not less than 5 pounds for each additional year or fraction of a year over one-half. Any marked deviation in the relative height and weight to the age of a candidate will add materially to the consideration for rejection. Candidates must be unmarried, and any Midshipman who shall marry, or who shall be found to be married, before his graduation, shall be dismissed from the service, and no midshipman may marry between the date of his graduation from the Naval Academy and his final graduation after two years' service at sea, except by permission of the Secretary of the Navy. All candidates must, at the time of their examination for admission, be between the ages of 16 and 20 years. The pay of a Midshipman is \$500, beginning at the date of admission. The regulations regarding places and times of examinations and subjects of examinations may be obtained by addressing the Chief of the Bureau of Navigation, Navy Department, Washington, D. C. A list of the Superintendents of the Naval Academy since its foundation will be found on page 557.

(a) Includes non-commissioned staff. (b) The companies that composed the organized militia were mustered out May 20, 1906.  
 \* Includes Mounted Signal Corps. † Includes Ambulance Corps. ‡ Includes Engineer Corps.  
 Alaska has no militia, though provision is made for such if need arises. Guam and Samoa each has a small provisional force used more for police purposes than for military. The Philippines have a constabulary force which can be used either for police or war purposes, provided the latter is on the islands. Porto Rico has a provisional regiment of 8 companies of infantry which is attached to the army, 700 foot and 100 mounted men, 100 non-commissioned officers, and 26 officers, the whole under command of a lieutenant-colonel of the United States Army. The reserve militia in the Southern States is assumed to include negroes capable of bearing arms.

THE NAVY.

The active list of the Navy comprises 1,785 commissioned and 453 warrant officers on the active list, and 641 commissioned and 76 warrant officers on the retired list. The enlisted strength allowed by law is 33,500 men and apprentice seamen.

MARINE CORPS.

The United States Marine Corps consists of a force of 311 officers and 6,000 men. Brigadier-General George P. Elliott is commandant.

The origin of the Navy Department may be said to date from October 13, 1775, when Congress authorized the equipment of two cruisers, mounting respectively 10 and 14 guns. Before the end of that year 15 more vessels of from 20 to 36 guns were authorized. The affairs of the Navy were at that time entrusted to a "Marine Committee." In 1798 the present department was formally created, and Benjamin Stoddard appointed the first Secretary.

OLD VESSELS.

There are in the Navy a small number of old vessels which are unserviceable for war purposes. Seven of these vessels are in service as receiving ships at the principal navy yards.

TUGS.

There are 41 tugs in the Naval Service, of which the Potomac has a displacement of 785 tons, and the two smallest, the Chickasaw and Rapido, 100 tons. These vessels are distributed among the various naval stations in the United States and the Philippine Islands.

VESSELS USED BY NAVAL MILITIA.

The following vessels are being used by the various State naval militia: Aileen, Alert, Alvarado, Dorothea, Elfrida, Enterprize, Gopher, Hawk, Huntress, Inca, Oneida, Monongahela, Pinta, Portsmouth, Puritan, Shearwater, Stranger, Sylvia, and Yantic.

All officers paid under this table, below the rank of Rear-Admiral, are entitled to 10 per cent. increase upon the full yearly pay of their grades for each and every period of five years' service as "longevity pay," computed upon their total actual service in the Navy or Marine Corps, provided that the total amount of such increase shall not exceed 40 per cent. upon the full yearly pay of their grade.

Officers of the line, medical and pay corps, commissioned prior to July 1, 1899, are entitled to receive pay according to the then existing law whenever it is in excess of the pay of officers of corresponding rank in the Army.

Officers ordered to "shore duty beyond seas" are entitled to sea pay plus 10 per cent. increase while taking passage in a merchant vessel to their posts of duty.

Chaplains above rank of Lieutenant receive the pay and allowances of a Lieutenant-Commander in the Navy according to the length of service under the provisions of law for that rank.

Warrant officers (boatswains, gunners, carpenters, sailmakers, pharmacists, and warrant machinists) are paid from \$1,200 to \$1,800 a year.

Commandants' clerks and paymasters' clerks receive from \$1,000 to \$1,800 a year.

Petty officers (masters-at-arms, boatswains' mates, gunners' mates, gun captains, quartermasters, machinists, hospital stewards, yeomen, bandmasters, first musicians, coxswains, electricians, boiler-makers, coppersmiths, blacksmiths, plumbers and fitters, sailmakers' mates, carpenters' mates, oilers, printers, painters, water tenders, and hospital apprentices, first class, receive from \$360 to \$540 a year.

The pay of first-class seamen per month is \$24; seamen gunners, \$26; firemen, first class, \$35; musicians, first class, \$32.

The pay of second-class seamen per month is: Ordinary seamen, \$19; firemen, second class, \$30; shipwrights, \$25; musicians, second class, \$30.

The pay of third-class seamen per month is: Landsmen, for training, \$16; coal passers, \$22; apprentices, third class, \$9.

## 678 Examinations for the Consular Service.

In pursuance of the Executive order of June 27, 1906, whereby the President promulgated regulations governing appointments and promotions in the consular service, the following rules have been adopted by the Board of Examiners, who, under that order, have been designated to formulate rules for and hold examinations of applicants for admission to the consular service whom the President shall have designated for examination to determine their eligibility for appointment therein:

1. The examinations will be the same for all grades and will be to determine a candidate's eligibility for appointment in the consular service, irrespective of the grade for which he may have been designated for examination and without regard to any particular office for which he may be selected.

2. The examinations will consist of an oral and a written one, the two counting equally. The object of the oral examination will be to determine the candidate's business ability, alertness, general contemporary information, and natural fitness for the service, including moral, mental and physical qualifications, character, address, and general education and good command of English. In this part of the examination the applications previously filed will be given due weight by the Board of Examiners, especially as evidence of the applicant's business experience and ability. The written examination will include those subjects mentioned in the Executive order, to wit, French, German, or Spanish, or at least one modern language other than English; the natural, industrial and commercial resources and the commerce of the United States, especially with reference to possibilities of increasing and extending the foreign trade of the United States; political economy, and the elements of international, commercial and maritime law. It will likewise include American history, government, and institutions; political and commercial geography; arithmetic (as used in commercial statistics, tariff calculations, exchange, accounts, etc.); the modern history, since 1850, of Europe, Latin America, and the Far East, with particular attention to political, commercial and economic tendencies. In the written examination, composition, grammar, punctuation, spelling and writing will be given attention.

3. To become eligible for appointment, except as student interpreter, in a country where the United States exercises extra territorial jurisdiction, the applicant must pass the examination outlined above, but supplemented by questions to determine his knowledge of the fundamental principles of common law, the rules of evidence, and the trial of civil and criminal cases.

4. The examinations to be given candidates for appointment as student interpreters will follow the same course as in the case of other consular officers, provided, however, that no one will be examined for admission to the consular service as a student interpreter who is not between the ages of nineteen and twenty-six, inclusive, and unmarried; and, provided further, that upon appointment each student interpreter shall sign an agreement to continue in the service so long as his services may be required, within a period of ten years.

5. Upon the conclusion of the examinations the names of the candidates who shall have attained upon the whole examination an average mark of at least eighty, as required by the Executive order, will be certified by the Board to the Secretary of State as eligible for appointment in the consular service, and the successful candidates will be informed that this has been done.

6. The names of candidates will remain on the eligible list for two years, except in the case of such candidates as shall within that period be appointed or shall withdraw their names. Names which have been on the eligible list for two years will be dropped therefrom and the candidates concerned will not again be eligible for appointment unless upon fresh application, designation anew for examination, and the successful passing of such second examination.

### DUTIES OF CONSULAR OFFICERS.

Consular officers are expected to endeavor to maintain and promote all the rightful interests of American citizens, and to protect them in all privileges provided for by treaty or conceded by usage; to *visa* and, when so authorized, to issue passports; when permitted by treaty, law, or usage, to take charge of and settle the personal estates of Americans who may die abroad without legal or other representatives, and remit the proceeds to the Treasury in case they are not called for by a legal representative within one year; to ship, discharge, and, under certain conditions, maintain and send American seamen to the United States; to settle disputes between masters and seamen of American vessels; to investigate charges of mutiny or insubordination on the high seas and send mutineers to the United States for trial; to render assistance in the case of wrecked or stranded American vessels, and, in the absence of the master or other qualified person, take charge of the wrecks and cargoes if permitted to do so by the laws of the country; to receive the papers of American vessels arriving at foreign ports and deliver them after the discharge of the obligations of the vessels toward the members of their crews, and upon the production of clearances from the proper foreign port officials; to certify to the correctness of the valuation of merchandise exported to the United States where the shipment amounts to more than \$100; to act as official witnesses to marriages of American citizens abroad; to aid in the enforcement of the immigration laws, and to certify to the correctness of the certificates issued by Chinese and other officials to Chinese persons coming to the United States; to protect the health of our seaports by reporting weekly the sanitary and health conditions of the ports at which they reside, and by issuing to vessels clearing for the United States bills of health describing the condition of the ports, the vessels, crews, passengers, and cargoes; and to take depositions and perform other acts which notaries public in the United States are authorized or required to perform. A duty of prime importance is the promotion of American commerce by reporting available opportunities for the introduction of our products, aiding in the establishment of relations between American and foreign commercial houses, and lending assistance wherever practicable to the marketing of American merchandise abroad.

In addition to the foregoing duties, consular officers in China, Turkey, Siam, Korea, Maskat, Morocco, and a few other so-called un-Christian countries, are invested with judicial powers over American citizens in those countries. These powers are usually defined by treaty, but generally include the trial of civil cases to which Americans are parties, and in some instances extend to the trial of criminal cases.

## AMUSEMENT PLACES IN MANHATTAN AND BRONX—Continued.

The hours for beginning theatrical performances in New York are dictated by the length of the plays. Owing to the increasing lateness of the dinner hour in New York, the beginning of theatrical performances is steadily growing later. Theatre-goers should consult daily newspapers for the time of the rise of curtains, although the doors of all theatres open at 7.30 P. M.

All New York theatres give Saturday matinees, the curtains rising at 2 P. M. Midweek matinees are generally given on Tuesdays, Wednesdays or Thursdays, the day varying in the cases of different attractions. Some of the popular-price theatres and the vaudeville houses give daily matinees.

The standard price for best orchestra seats in New York theatres of the first class is \$2. The scale at these houses grades down to 50 cents for seats in the top balcony. Occasionally, when eminent foreign stars visit New York, \$3 is charged for best seats, the scale being raised in equal ratio in the balconies. In most theatres of the first class seats may be reserved in any part of the house.

The standard price for best orchestra seats in the so-called popular-price theatres is \$1. The scale in these houses grades down to 25 cents for seats in the top balcony. It is not customary to reserve top balcony seats in these theatres.

The standard price for best orchestra seats at the Metropolitan and Manhattan Grand Opera-Houses is \$5. The scale at these houses grades down to \$1 for seats in the top balcony. At the Metropolitan Opera-House boxes are leased or subscribed for by the season. Some of the privately owned boxes are valued at \$100,000.

The New Theatre, now building at Central Park West and Sixty-second Street, will be, it is claimed, New York's nearest approach to an endowed theatre. Stock to the amount of \$2,000,000, it is stated, has been subscribed for by capitalists and lovers of dramatic art, who announce that no return will be expected for their investment, and that the play-house, which will be devoted both to drama and opera comique, will be conducted on altruistic lines. A permanent stock company will be maintained; otherwise no definite policy has been adopted. It is expected that the play-house will be opened to the public during the season of 1909-10.

It is true that many of the best seats in New York theatres fall into the hands of ticket speculators, who hold them at premiums of from 25 to 200 per cent., according to the popularity of the attraction. Theatre ticket speculation is sanctioned by law in New York, and speculators are licensed by the city government. Most theatres allow one large agency large blocks of their best seats for sale at the hotels at a premium of 50 cents each; but most theatre managers discountenance sidewalk speculation, although they are powerless to prevent it. Many of them, however, frequently announce that tickets purchased of sidewalk speculators will be refused at the door.

At 7 o'clock each evening the hotel agencies return unsold tickets to the respective theatres, and good seats, even at the best patronized performances, can usually be obtained at that hour.

Seats may be reserved in advance at New York theatres from two to six weeks preceding the date of use. In the case of new productions, managers claim that they fill orders in the order in which they are received. Reservations by mail are filled for out-of-town theatre-goers, but such orders must always be accompanied by a check or money order covering the full amount of the price of such seats.

In the number, beauty and convenience of its theatres New York leads all other cities of the world except, perhaps, London. There are, however, in a few cities of Continental Europe theatres under municipal or State endowment which, as works of architectural art, are more beautiful than the best New York theatres. The New Amsterdam Theatre is the most costly privately owned theatre in the world. The Hippodrome, seating 5,600 people, is the largest theatre of its kind in the world.

The Court of Appeals of the State of New York has decided that the proprietor of a theatre has the right to decide who shall be admitted to witness the plays he sees fit to produce, in the absence of any express statute controlling his action. He derives from the State no authority to carry on his business, and may conduct the same precisely as any other private citizen may transact his own affairs. But the holder of a ticket which entitles him to a seat at a given time and place of amusement, being refused admission, is entitled to recover the amount paid for the ticket and, undoubtedly, such necessary expenses as were incurred in order to attend the performance.

## A Shakespearian Table.

PROFESSOR ROLFE, the Shakespearian scholar, has counted the lines which the principal characters in Shakespeare's plays have to speak. His rule was to consider parts of lines, beginnings and endings of speeches as full lines. This is the result:

Lines to Speak.	Lines to Speak.	Lines to Speak.
Hamlet..... 1,569	Macbeth..... 705	Mistress Page..... 361
Richard III..... 1,161	Cleopatra..... 670	Viola..... 553

### The Stage in New York City, 1907.

A RECORD OF NEW PLAYS AND REVIVALS FROM DECEMBER 1, 1906 TO NOVEMBER 30, 1907.

THERE are, in New York City, about sixty-eight theatres devoted to drama, opera, spectacles, concerts, vaudeville, and other forms of stage entertainment (see WORLD ALMANAC, 1908). The total number of events, changes of bill, special performances, trials of plays, etc., in all these theatres during the regular dramatic season of forty weeks approximates 800. Of the above mentioned number of theatres, thirty are producing houses, devoted to productions and runs of their own plays or those of producing managers who are not theatre managers, and also revivals of standard plays. The following summary of dramatic events include all the productions and revivals in these thirty producing theatres, but excludes the German (Deutscher) Theatre, where about forty dramas in German are given during the regular season.

**Banks in Manhattan and Bronx.**

The Clearing-House is at 77 Cedar Street, Manhattan Borough. Wm. Sherer is manager, Wm. J. Gilpin, assistant manager. Fifty-four banks are associated for the purpose of exchanging the checks and bills they hold against each other. Other banks, not members of the association, clear through members. The representatives of the members appear at the Clearing-House at 10 o'clock A. M. every business day, with the checks and bills to be exchanged. The resulting balances are ascertained in about an hour, and before half-past one o'clock those indebted pay their balances, and after that hour the other banks receive the amounts due them. The Clearing-House has been in operation since 1853.

Following are extracts from the Manager's annual report for year ending September 30, 1907: The Clearing-House transactions for the year have been as follows: Exchanges, \$95,315,421.237; balances, \$3,813,926.108; total transactions, \$99,129,347.346. The average daily transactions: Exchanges, \$513,537.569; balances, \$12,545,809; total, \$526,083.379. Total transactions since organization of Clearing-House (54 years): Exchanges, \$1,856,617,161,435; balances, \$86,285,126,899; total, \$1,942,902,288,335.

Banks are open from 10 A. M. to 3 P. M., and on Saturdays from 10 A. M. to 12 noon. Commercial paper, except sight or demand bills, falling due on Saturday is payable on the following business day.

## Pawnbrokers' Regulations in the City of New York.

PAWNBROKERS in New York City are regulated by statute. The rate of interest fixed by law is 3 per cent. a month or any fraction of a month for the first six months, and 2 per cent. per month for each succeeding month upon any loan not exceeding \$100, and 2 per cent. a month for the first six months and 1 per cent. a month for each succeeding month on any loan exceeding \$100. Pledges cannot be sold until after they have been kept one year, and then at public auction by a licensed auctioneer, after publication of at least six days in two daily newspapers designated by the Mayor. Pawnbrokers pay a yearly license fee of \$500 to the city and are under the control of the Mayor. The license is issued through the Bureau of Licenses, and their books must be kept open to the Mayor, Criminal Courts, Magistrates, and Police.

### PROVIDENT LOAN SOCIETY (EXECUTIVE OFFICE, 105 EAST 22D ST.) LOANING OFFICES: 279 4TH AVE., 186 ELDRIDGE ST., 119 WEST 42D ST., 105 EAST 125TH ST., 409 GRAND ST. BROOKLYN, 24 GRAHAM AVE.

Office hours: 9 A. M. to 5 P. M.; Saturday to 6 P. M. Ticket good for one year only. Loans may be paid by instalments, in sums not less than \$1. Rates of interest: One per cent. per month, or any fraction thereof. Only one-half month interest charged on all loans redeemed within two weeks after date of pledge. Condition of loan, agreed to by the holder of the ticket in consideration of interest being charged at less than the rate allowed by law. The Provident Loan Society of New York shall not be liable for loss or damage by fire, breakage, dampness, theft, or moths; nor shall it be liable in any event for more than 25 per cent. in addition to the amount loaned. James Speyer, President; Frank Tucker, Vice-President; Otto T. Bannard, Treasurer; Mortimer L. Schiff, Secretary; M. G. Hopf, Assistant to Treasurer.

When making payment by instalment, the full amount of interest due on the sum loaned must be included, and the ticket must be returned. The interest due on the loan cannot be paid by instalment. The Society has thus far limited the classes of personal property on which it has made loans to clothing and so-called "jewelry," including under that designation all articles of gold or silver, precious stones, opera-glasses, eye-glasses, also men's clothing in good condition, and ladies' and men's furs.

The preceding table shows that the area comprised within the present limits of the City of New York had an estimated population of 49,401 in 1790, which had grown to 696,115 in 1850, representing an increase of 646,714, or 1,309.1 per cent. The population of the present City of New York had grown to 2,507,414 in 1890, or an increase since 1850 of 1,811,299, or 260.2 per cent. Since 1890 there has been an increase of 929,788, or 37.1 per cent., the population in 1900 being 3,437,202.

**New York Chamber of Commerce.**

ORGANIZED April 5, 1768. Incorporated by George III, March 13, 1770. Reincorporated by the State of New York April 13, 1784. Its object is indicated in the following words of the original charter: "Sensible that numberless inestimable benefits have accrued to mankind from commerce; that they are, in proportion to their greater or lesser application to it, more or less opulent and potent in all countries; and that the enlargement of trade will vastly increase the value of real estates as well as the general opulence of our said colony," and "to carry into execution, encourage, and promote, by just and lawful ways and means, such measures as will tend to promote and extend just and lawful commerce."

During the decade 1760-1770, according to Lord Sheffield's *Observations*, the average yearly value of American Colonial imports from Great Britain was £1,763,409, and of exports to the same country £1,044,591. Up to the evacuation of the city by the British and its occupation by the Americans, on the 25th of November, 1783, the New York Chamber of Commerce had had seven presidents, thirteen vice-presidents, eight treasurers, one secretary, and 135 members. In May, 1763, the Sandy Hook Light-House was lighted up for the first time. In 1786 the Chamber of Commerce first suggested the construction of the Erie Canal, and in 1784 petitioned the New York Legislature (which so ordered) that duties should be levied under a specific instead of an *ad valorem* tariff—a system of which the Chamber of Commerce has ever since been the constant advocate.

As a society the Chamber of Commerce consists of fifteen hundred resident and two hundred and fifty non-resident members. Initiatory fees have varied between the sum of ten Spanish dollars, required in 1770, and \$50, which is now demanded from every accepted candidate. Annual dues, \$50 per annum. Non-resident members, \$25 per annum.

The building of the Chamber is at 65 Liberty Street, New York. Officers: *President*, J. Edward Simmons; *Secretary*, George Wilson; *Treasurer*, James G. Cannon.

## Subway Systems of New York City.

The existing subway systems consist of:

- 1—A four-track trunk line from City Hall Park, through Lafayette Street, 4th Avenue, 42d Street, and Broadway, to 96th Street.
- 2—A two-track southern extension, from the City Hall loop, through Broadway to South Ferry, whence it is to connect with the tunnel under the East River to the Brooklyn subway system now under construction. This extension would now be in operation but for errors in construction in the tunnel under the river.

The Brooklyn subway through Joralemon and Fulton Streets is practically ready. It promises to run cars from the Battery to the Flatbush Avenue terminal of the Long Island Railroad by the first of 1908.

The rapid transit authorities of the city have contracted for an extension of the Brooklyn subway system, from Flatbush and Atlantic Avenues along 4th Avenue to 65th Street, Bay Ridge. The next step is to continue the subway on 4th Avenue to Fort Hamilton, with a spur from Bay Ridge to the West End of Coney Island. Ultimately the 4th Avenue subway will go under the Narrows to Staten Island.

- 3—Three two-track northern extension, as follows:

A—One on Broadway, to Van Cortlandt Park. It has been put in operation as far as Kingsbridge at the Harlem Ship Canal.

B—One under Central Park and Lenox Avenue, to the Harlem River at 139th Street.

C—One from 135th Street and Lenox Avenue, under the Harlem River, and through 149th Street, Westchester Avenue, and the Southern Boulevard to Bronx Park.

To the existing subway systems is soon to be added an underground loop in Manhattan, connecting the Brooklyn, Manhattan and Williamsburg bridges. Bids on this work have been advertised for. The next step will be to connect the Brooklyn ends of the three bridges named with a system of subways reaching out all over that borough.

Extensions to the present subway system have been formally adopted and authorized by the Rapid Transit and Public Service Commissions, as follows:

- Route 1—1st Avenue, Bronx, beginning at East 138th Street and Alexander Avenue running southerly, a four-track subway under Alexander Avenue and the Harlem River to 1st Avenue; continuing under 1st Avenue to 2d Street, to 1st Street, to East Houston, to Essex, to Hester (where a two-track loop will begin—passing through private property, Seward Park, East Broadway, Canal and Essex Streets); from Hester continuing two tracks through Essex and Rutgers Streets to Madison Street, to Roosevelt Street and New Bowery; to Pearl, to Water, to Pine Street, to Wall, to Beaver Street and Bowling Green to Battery Park.

Beginning at Alexander Avenue and 138th Street, a four-track subway through Alexander, 3d, Melrose and Webster Avenues to 171st Street; a two-track loop through Webster Avenue and Claremont Park, returning to Webster Avenue at 171st Street.

The McAdoe syndicate now merged into Pennsylvania RR. interests, is building two sets of twin tubes under the Hudson. One is from the Pennsylvania terminal at Montgomery Street, Jersey City, to Cortlandt Street, Manhattan, where a twenty-two-story terminal is now going up. These tubes are to connect, underground, at Cortlandt Street, with the Broadway subway.

The other set of twin tubes is being bored from Jersey City, from a point between the Erie and Lackawanna terminals, to Morton Street, in Manhattan. The tubes to Morton Street are bored. Those to Cortlandt Street are under way, and more than half finished. In Jersey City they come to the surface south of the Heights and connect with the Pennsylvania Railroad. There is to be a subway in Jersey City, joining the two sets of McAdoe tubes there. It is said nothing heavier than steel trolleys will be operated in either set of tubes, the trolleys to connect in Jersey with the various steam and electric lines.

The McAdoe syndicate is also building a subway in Manhattan, to connect its upper set of tubes with traffic over there. The subway has been built through Christopher Street to and some distance up along 6th Avenue, whence it is to end at the Pennsylvania Railroad terminal at 31st Street. A branch is to be constructed from Christopher Street through 9th Street to 4th Avenue, where it will connect with the Interborough subway.

The Pennsylvania is tunnelling the Hudson and the East Rivers at 31st Street, and is connecting the river tubes with a subway across Manhattan which will enable it to run trains direct from Jersey under this city to Long Island City, and thence north by an immense bridge over the upper East River to the Bronx, and so on north and east. The tubes under the Hudson and those under the East River are completed.

## Bridges in and About the City of New York.

### BROOKLYN BRIDGE.

The bridge connecting Manhattan and Brooklyn over the East River from Park Row, Manhattan, to Sands and Washington Streets, Brooklyn, was begun January 3, 1870, and opened to traffic May 24, 1883. Total cost of the bridge to December 1, 1897, about \$21,000,000.

The tolls are: For foot passengers, free; railway fare, 3 cents, or 2 tickets for 5 cents; one horse, 3 cents; one horse and vehicle, 5 cents; two horses and vehicle, 10 cents; each extra horse above two attached to vehicle, 3 cents; bicycles, free. On July 1, 1898, the bridge railway was leased to the elevated railroad companies (now operated by the Brooklyn Rapid Transit), paying therefor \$250 per day; trolley cars, 5 cents per round trip. About 120,000 surface cars cross the bridge each month. The carriage ways are under control of the Bridge Commissioner, and about \$60,000 per annum is derived from this source.

The following are the statistics of the structure: Width of bridge, 85 feet. Length of river span, 1,595 feet 6 inches. Length of each land span, 930 feet. Length of Brooklyn approach, 998 feet. Length of New York approach, 1,562 feet 6 inches. Total length of carriage way, 6,016 feet. Total length of the bridge, with extensions, 7,580 feet.

Size of Manhattan caisson, 172 x 102 feet. Size of Brooklyn caisson, 168 x 102 feet. Timber and iron in caisson, 5,253 cubic yards. Concrete in well holes, chambers, etc., 5,669 cubic feet. Weight of Manhattan caisson, about 7,000 tons. Weight of concrete filling, about 8,000 tons.

Manhattan tower contains 46,945 cubic yards masonry. Brooklyn tower contains 38,214 cubic yards masonry. Depth of tower foundation below high water, Brooklyn, 45 feet. Depth of tower foundation below high water, Manhattan, 78 feet. Size of towers at high water line, 140 x 59 feet. Size of towers at roof course, 136 x 53 feet. Total height of towers above high water, 278 feet.

Clear height of bridge in centre of river span above high water at 90° F., 135 feet. Height of floor at towers above high water, 119 feet 3 inches.

Grade of roadway, 3¼ feet in 100 feet. Height of towers above roadway, 159 feet. Size of anchorage at base, 129 x 119 feet. Size of anchorage at top, 117 x 104 feet. Height of anchorages, 89 feet front, 85 feet rear. Weight of each anchor plate, 23 tons.

Number of cables, 4. Diameter of each cable, 15¼ inches. Length of each single wire in cables, 3,578 feet 6 inches. Ultimate strength of each cable, 12,000 tons. Weight of wire, 12 feet per pound. Each cable contains 5,296 parallel (not twisted) galvanized steel, oil-coated wires, closely wrapped to a solid cylinder, 15¼ inches in diameter. Permanent weight suspended from cables, 14,680 tons.

### NEW YORK AND NEW JERSEY BRIDGE.

Commissioners—F. W. Devoe, R. Somers Hayes, Isidor Straus. Assistant Secretary—Charles H. Swain. Commissioners' office, 29 Broadway, Manhattan. The Commissioners of the New York and New Jersey Bridge and the Sinking Fund Commissioners of the City of New York selected a location midway between 49th and 51st Streets, Manhattan. And the State Commissioners have located a freight approach along the marginal wharf, or place, 5 feet west of the westerly line of West Street, with power of the Dock Department saying what docks and turnouts shall be built upon in order that cars can be loaded from ships without extra handling. The maximum length of span is 2,731 feet. Guaranteed cost of the bridge is \$20,000,000, and will be a double-deck bridge, as approved by the Secretary of War, July 3d, 1900, for trolley and steam traffic. The law provides that the bridge must be completed within ten years. The Union Bridge Company has made a contract with the companies to construct the bridge within six years from the time it commences work, and gave a bond of \$1,000,000 for the faithful performance of the contract. It is intended to begin work of construction when the freight approaches to the bridge have been approved by the Sinking Fund Commissioners of New York City.

### WILLIAMSBURG (NEW EAST RIVER) BRIDGE.

The tower foundations for the bridge in Manhattan are at the foot of Delancey Slip, and in Brooklyn at a point between South Fifth and South Sixth Streets. The bridge ends at Clinton Street in Manhattan, and at Haveneyer Street in Brooklyn. The dimensions of the bridge are as follows: Main span, 1,600 ft.; entire bridge, between terminals, 7,275 ft.; width of bridge, 118 ft.; minimum height of bridge above mean high water, 135 ft.; height of centre of cables at top of towers above mean high water, 332 ft. 8½ in.; width of carriage ways, each 20 ft.; width of two foot-walks, each 10½ ft.; width of two bicycle paths, each 7 ft.; width of four trolley-car tracks, centre to centre, 9¾ ft.; width of two elevated railroad tracks, centre to centre, 11 ft. New York side—North caisson, 55 ft. below low water mark; south caisson, 65 ft. Brooklyn side—North caisson, 107.5 ft. below low water mark; south caisson, 91.9 ft. The tower foundations are 23 ft. above high water mark and the towers that are placed on top of them are made of steel. The cost is about \$12,000,000, exclusive of real estate. The bridge was opened to the public in December, 1903.

### PROPOSED BRIDGES OVER THE EAST RIVER.

Manhattan Bridge (No. 3). Work of construction of tower foundation in Brooklyn commenced August 29, 1901. The construction of the anchorages, the towers, cables and the suspended superstructure is now under way. Title to land vested in the city September 14, 1901.

Blackwell's Island Bridge (No. 4). Plans approved by the War Department, February 23, 1901. Ordinance providing for the issue of stock to the extent of \$550,000 signed by the Mayor, May 21, 1901. Title to land vested in the city December 22, 1901. Work of constructing the piers commenced July 19, 1901. The construction of the cantilever spans is in progress.

### CENTRAL PARK.

The great park of New York extends from 59th St. to 110th St., being over  $2\frac{3}{4}$  miles long, and from 5th Ave. to 8th Ave., being over half a mile wide. It covers 843 acres, of which 185 are in lakes and reservoirs and 400 in forest, wherein over half a million trees and shrubs have been planted. There are 9 miles of roads,  $\frac{5}{8}$  of bridle paths, and 31 of walks. The landscape architects of the Park were Frederick Law Olmsted and Calvert Vaux. Public park carriages can be found (except in Winter) at the entrances on 5th Ave. and 8th Ave. The fare for an extended ride through the Park is 25 cents. Work was begun on the Park in 1857. The following fanciful names have been officially applied to the several entrances to the Park: 5th Ave. and 59th St., Scholar's Gate; 6th Ave. and 59th St., Artist's Gate; 7th Ave. and 59th St., Artisan's Gate; 8th Ave. and 59th St., Merchant's Gate; 8th Ave. and 72d St., Woman's Gate; 8th Ave. and 81st St., Hunter's Gate; 8th Ave. and 85th St., Mariner's Gate; 8th Ave. and 96th St., Gate of All Saints; 8th Ave. and 100th St., Boy's Gate; 8th Ave. and 110th St., Stranger's Gate; 5th Ave. and 67th St., Student's Gate; 5th Ave. and 72d St., Children's Gate; 5th Ave. and 79th St., Miner's Gate; 5th Ave. and 90th St., Engineer's Gate; 5th Ave. and 96th St., Woodman's Gate; 5th Ave. and 102d St., Girl's Gate; 5th Ave. and 110th St., Pioneer's Gate; 6th Ave. and 110th St., Farmer's Gate; 7th Ave. and 110th St., Warrior's Gate.

### FACTS ABOUT PUBLIC PARKS.

Union Square was purchased by the city in 1833 for \$116,051; Madison Square, in 1847, for \$65,952; Tompkins Square, in 1834, for \$93,358; Washington Square, in 1827, for \$77,970, and Manhattan Square, in 1839, for \$54,657. The latter is assessed as a part of Central Park. The other four are assessed at over \$16,000,000, and are easily worth \$20,000,000, while their original cost to the city was only \$353,331. Prospect Park, Brooklyn, contains 516 1-6 acres. In woodland, 110 acres; in lakes and watercourses, 77 acres; in meadows, 70 acres; in plantations, 259 1-6 acres; in drives, 9 miles; in bridle roads, 3 1-10 miles; in walks, 12 miles. Ocean Parkway is 5 1-2 miles long and 210 feet wide. Eastern Parkway is 2 1-2 miles long and 210 feet wide. London has 271 public parks, containing 17,876 acres of ground. The largest European city park is in Denmark; it contains 4,200 acres. The great forest of Northern New York covers an area of 3,588,803 acres.

# HOW MEN MAKE BIG SALARIES

By VICTOR FORTUNE

*The Story of Workers Who Make Their Work Pay Big Dividends—How They Do It.*

Does your work pay?  
Not just day wages, but a good, round, stiff salary.

If not, why don't you make it pay?  
You see men about you who earn dollars where you earn dimes, yet they work no harder than you.

Why don't you make your work count, too?

You can.  
What makes the difference? Luck?  
Not often. What then?

In one word—*training*.  
To illustrate: A. M. Fowler, Springfield, Mo., was a journeyman pattern-maker when he faced the proposition that now confronts you.

## HOW ONE MAN DID IT.

His first step was to enroll for a Mechanical Course in the International Correspondence Schools, Scranton, Pa., an institution whose sole business is to raise the salaries of workers. Mr. Fowler is now General Manager of the Phoenix Foundry and Machine Company, Springfield, Mo., at an increase in salary of about 400 per cent.

In telling how he made *his* work count, he writes:

"I must say that I think the International Correspondence Schools the greatest boon existing for the working man. In my own experience, they have been worth to me, without any exaggeration whatever, *thousands of dollars*."

That is how one man did it. Take another case: Russel Cooper, 2340 North Penn Street, Indianapolis, Ind.

Mr. Cooper was janitor of a church at the time he enrolled for the Electrical Course of the I. C. S. Within two years he became Electrician in charge of the Main Shop of the Terminal Railroad Association of St. Louis. He is now Superintendent of the Indianapolis Light and Heat Company. He writes:

"My earnings are now over six times as much as when I enrolled,

and I can see even further progress ahead."

## AN INCREASE OF 1,000 PER CENT.

How G. A. Collins made *his* work pay would read like romance if it were not actual fact. Mr. Collins was a chainman with a Railroad Maintenance of Ways Department at the time of enrolling with the I. C. S. After a few months he was promoted to rodman, and then to transitman. Not being satisfied, he resigned and went into irrigation work for the government. Now he has an office of his own as Civil Engineer and, in addition, is Chief Engineer of a large coal company. He reports: "My earnings have been increased during this time nearly 1,000 per cent. I can recommend your schools to any ambitious and earnest man. The I. C. S. is certainly a wonderful institution."

1,000 per cent. is a pretty fair return on the small investment required for an I. C. S. Course, isn't it?

Mr. Collins's address is 717 New York Block, Seattle, Wash.

Here is the name and address of another worker who made his work return big dividends with the aid of the I. C. S., Joseph Cain, Searles, Ala.

When Mr. Cain enrolled for one of the I. C. S. Mining Courses he was a Mine Foreman at \$90 per month. He now holds the position of Mine Superintendent with the Alabama Consolidated Coal and Iron Company, at a salary of \$225 a month. Mr. Cain says:

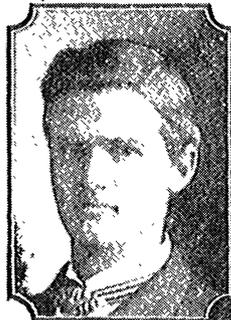

"I know of no other method than the I. C. S. by which a man can advance so quickly and surely."

Advancement quick and sure, right where you are, is the record of I. C. S. men throughout the world. At your present work, without the loss of a minute's time or a dollar's pay, the I. C. S. takes you, trains you, and shows you how to make that work pay, how to advance in it, or how to change to

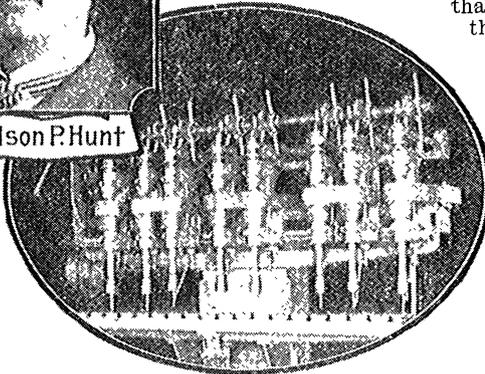

a more congenial occupation. The I. C. S. can do this because it has a staff of 2,700 people and an invested capital of \$6,000,000 devoted to the express purpose of training you to *make your work pay*.

When a man who is willing to do his part gets the I. C. S. organization behind him, don't you think it ought to help—a little?

Take, for instance, the case of a young man like Wilson P. Hunt, Moline, Ill. While still a machinist's apprentice, 20 years of age, Mr. Hunt enrolled for the Mechanical Course. On finishing the course and receiving his diploma, he became a draftsman and then a machine designer. Later he started the Moline Tool Company, Moline, Ill., becoming Secretary and Superintendent of the concern. The I. C. S. supplied just the help needed by Mr. Hunt to realize his ambition.

Wilson P. Hunt

FROM APPRENTICE TO PROPRIETOR—GANG-DRILL NOW MADE IN HIS OWN FACTORY.

When Chas. E. Norberg, 1026 Albany Street, Los Angeles, Cal., got in line with the I. C. S., his income began to increase in a most surprising way.

Mr. Norberg's remuneration as carpenter was \$3 a day when he enrolled for the Architectural Course. He tells us: "Previous to this I had only a common school education, but the instruction given was *so plain, so easy to follow, and so practical* that I have now become a General Contractor, and my earnings range from \$75 to

\$100 a week. The I. C. S. is certainly a great blessing to the wage-earner."

What Mr. Norberg says about the simplicity of his instruction is characteristic of all I. C. S. lessons and text-books. They are easy to *learn*; easy to *remember*; easy to *apply*. Not even a common school education is required, only the ability to read and write. But one obstacle can stand in the way of the success of an I. C. S. man—his own lack of ambition.

Still another Californian, who dates his rise from his enrollment with the I. C. S., is Albert K. Harford, 854 Fifty-third Street, Oakland, Cal.

At the time of enrolling Mr. Harford held the position of engine-room storekeeper at \$35 a month. Let him tell what happened in his own words:

"For those who have to work for a living, there is no better way of advancement than through the I. C. S.

Their excellent instruction and help enabled me to advance from one position to another rapidly, and I am now Foreman Machinist for the Pa-

cific Steamship Company, at a salary of \$130 per month."

WHAT A BRICKLAYER DID.

Does training pay? Can you make it pay? Ask Daniel K. Albright, 319 McKean Street, Kittanning, Pa. Mr. Albright writes:

"When working as a bricklayer at bricklayers' wages, I was *induced* to enroll in the I. C. S. After studying nights, through the perfect manner in which the schools carry on their instruction, I was soon able to read

blueprints, and was appointed foreman at an increase of wages."

Note that the I. C. S. taught him not to work harder, but to read blueprints—trained him to make his work pay.

Was Mr. Albright satisfied with this advance? Being a true I. C. S. man—never! Hear the rest of his letter:

"Resigning this position (foreman), I entered the employ of the Kittanning Plate Glass Company, of which firm I am now General Superintendent, and my earnings are now nearly 600 per cent. more than when I enrolled. The I. C. S. instruction is so simple and easily understood that any man may gain unspeakable good through it."

Knowing what he does now, how much persuasion do you think would be necessary to induce Mr. Albright to enroll with the I. C. S., if he had it to do over again?

#### WHAT WOULD PERSUADE YOU?

If you were really awake to your own interests, how much persuasion do you think ought to be necessary to induce you to write and ask how the I. C. S. can help you?

But, you say, these men are exceptions. On the contrary, they are cases picked at random out of thousands of successful I. C. S. men. The I. C. S. has gone to the trouble of putting a thousand of their names

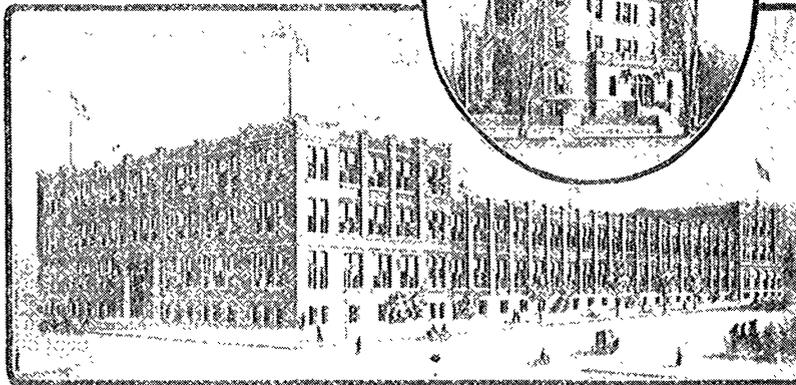

and addresses with their stories in a book, which will be sent to you for the asking. The I. C. S. organization is so perfect that it reaches, instructs and trains these men in any State of the Union or in any part of the world.

Here is former street railway worker T. T. Buzzill, care of J. E. Henry & Son, Lincoln, N. H., who writes:

"I knew nothing about electricity when I took out my course in the I. C. S. I now have charge of the telephones and lights for J. E. Henry & Son, and my salary has been increased 100 per cent. I would never have been able to get above the pit work in the power-house if it was not for the instruction received from the I. C. S."

Another New Englander, Harry E. Green, Waterville, Me., a former transitman, writes:

"I now have an office of my own, and have increased my earnings 200 per cent. My course has made me more valuable to my customers, and I have been enabled to understand

SCHOOL BUILDINGS OCCUPIED ENTIRELY BY THE I. C. S.

many things which I could not have learned otherwise. I will gladly correspond with any one desiring to better himself by taking a Course."

Henri B. Bixler, Akron, Ohio, a former mill hand in a screen-door factory, testifies:

"I have advanced to Superintendent of Construction of the Tri-County Telephone Company, and have increased my earnings 250 per cent. All this success I attribute to the I. C. S. I consider this method of instruction the *best plan in existence* for the young man who has his own way to make in the world."

**A SURE AND QUICK WAY.**

The I. C. S. gives a man who has no regular trade or profession a paying start. Before enrolling with the I. C. S., Harry M. Moxley, 1427 Williams Building, Cleveland, Ohio, was office boy, farmer boy, and painter by turns. He writes:

"After I had gone a short way in my Course, the Students' Aid Department secured for me a position with a firm in Cleveland, and from that time I have had steady advancement up to my present position as chemist with the Cleveland Steel Casting Company. During this time I increased my earnings \$80 a month. My experience with the Schools proves that the I. C. S. plan is the most *sure and quick way* for any ambitious man to gain advancement and increased earnings."

The Students' Aid Department, which helped Mr. Moxley to obtain a higher position, is organized specifically to assist all I. C. S. men in their efforts to make their work pay. Its connection with the largest employers of trained men in the country has enabled it to place thousands of men in better positions at larger salaries. During 1906 voluntary reports were received from 3,376 I. C. S. men who had been advanced in salary or position—only a fraction of the thousands who were advanced and did not report. What the I. C. S. did for them, it can and will do for you.

**ARE YOU GETTING YOURS?**  
This is an era of unexampld

wealth. These dozen men named are just a few of the thousands whom the I. C. S. has helped to place in the stream of prosperity. They are *trained* to get their share, and are getting it.

Are you getting yours? If not, why not? It's waiting for you!

The I. C. S. points the way, but you must take the initiative. The first step is yours. The expression of willingness must come from you. Are you willing to write to the I. C. S. and ask to be shown how to make your work pay? Or are you content to sit back with small wages and let your companions, who work no harder than you, walk off with all the rewards?

Bear in mind, no man need leave his own State, or town, or work. Right where he is, the I. C. S. is most valuable. *It goes to the man*, stands by him, works with him and for him, equipping him to secure that due share to which his energy and talents entitle him.

Why labor for little when, with training, you may have much? Indicate on the following coupon the position you prefer. Cut out coupon and mail at once. Do not be a lag-gard in the race! *Make your work pay!*

# THE ANATOMY OF A PIANO

Wonderful Method of Construction Employed in Modern Labor Utopia,  
where it takes years to make a single instrument.

EVERY now and then some sociologist discovers a certain labor Utopia, whose abiding place is in the Middle Western States. The said Utopia is a giant factory where hundreds are employed and where the workers are treated much as members of one big family. Hardly a newspaper or magazine in the whole country but which has at times commented upon the existence of the great Western factory, dwelling at length upon the fellowship that exists among all the

WORK, WHICH GIVES SUCH EXCELLENT RESULTS THAT IT HAS  
NEVER BEEN CHANGED.

men and women employed therein. So widely has this Western factory been exploited that the public has possibly reached the conclusion that it is the only model factory in the world. Such is not the case.

As a matter of civic pride, a search has been made of New York, and a mate, if not a superior, to the Western Utopia has been discovered by the World. It is a mammoth piano factory, or, rather, a series of piano factories, operated by one company—Steinway & Sons. The great factories of this famous old piano manu-

facturing concern are real models in every sense of the word, and they are the cleanest factories in the world.

#### REMARKABLE CONDITIONS OF MANUFACTURE.

Everyone, of course, knows the international reputation of the Steinway piano, although but few know of how it is made and under what remarkable conditions it is prepared for the grand service to which it is eventually put. It will therefore be the object of this article to carry the reader through the wonderful workrooms of the Steinway model factories, showing as clearly as possible just what goes into a Steinway piano and why its place of manufacture is the certain realization of the Utopian dream.

There are three Steinway factories in New York. Two of them are located at Steinway, Long Island, a booming little town just opposite and paralleling the upper eastern section of Manhattan. The site of Steinway comprises about four hundred acres, which immense tract was purchased by the original Steinway about fifty years ago. At that time the ground was only nominal in value, but to-day it is worth millions of dollars.

#### THE PIANO'S ORIGINAL HOME.

The third factory, which was the original Steinway factory, is located in Manhattan, at the corner of Fifty-third Street and Park Avenue. It has been standing for fifty years, and, although at one time all Steinway pianos were manufactured under its roof, it is now used only as a finishing factory, while the operation of manufacture begins at Steinway, at what is known as the Riker Avenue factory. From this factory it proceeds to the Ditmars Avenue factory, which is a mile distant, and thence to the Manhattan finishing factory.

At the Riker Avenue factory site are also located the immense lumber yards of Steinway & Sons, possibly the most remarkable lumber yards in the world. It is well known, of course, that lumber composes the main parts of a piano, and consequently the utmost care is employed in its selection and care.

In the construction of the Steinway piano about twenty different kinds of lumber are used, and more than six million feet are always on hand in the yards. The method of seasoning the lumber is unique. It remains in the yards and sheds for from five to ten years before it is ready to be used for piano parts. This means that the manufacturers have constantly tied up in lumber alone a sum of money approximating half a million dollars. As the lumber is used, it is immediately replaced, so that at all times the yard is full.

#### COMPARED TO A MOTHER'S LOVE.

The care taken of the Steinway lumber may be compared to that of a mother for a child. In the first place, it is a well-known fact among those conversant with the making of pianos that the house of Steinway pays a substantial bonus to owners of lumber yards for the privilege of having its buyers take their pick of the lumber before any one else has an opportunity to get at it. In this way the finest lumber is obtained exclusively by the Steinways.

The Steinway lumber buyers are no doubt the best judges of piano lumber in the world. They go into a lumber yard and examine every plank minutely. Selecting just exactly what they want, they keep guard over it until it is delivered safely into the Steinway yards at the Riker Avenue factory. As soon as it reaches this destination each plank is recorded, just the same as a bank cashier would record dollars. Then the lumber is piled, and across the end of each plank a small strip of wood is nailed so that the plank is prevented from checking. In addition, the date of its reception is stamped upon the plank, as well as the name of the buyer.

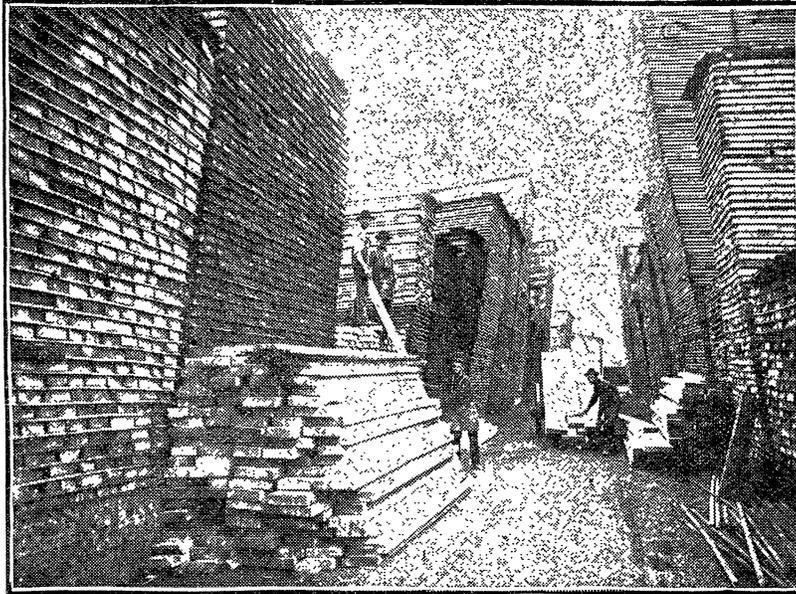

#### REMAIN IN LUMBER YARDS FOR YEARS.

Some of these planks remain in the yard for years before they are regarded

as perfect enough to start on their way through a seasoning shed, where they remain on an average of about two years, and thence through a series of drying kilns. After making the proper test, a test which is secret, by the way, in the drying kilns, the lumber is ready to become a part of a Steinway piano, but it is many months, and sometimes years, before it is finally put out as the finished Steinway piano.

It is little wonder, in view of the lumber preparation, that a Steinway piano lasts perfectly through several generations. In fact, a very considerable part of the reputation of the Steinway piano is based upon the preparatory treatment of lumber.

At the cost of about \$100,000 an immense lumber shed was erected at the Riker Avenue plant, the only lumber shed of its kind in the world. It has an area of

AN ALLEY OF LUMBER AT RIKER AVENUE PLANT, WORTH HALF A MILLION DOLLARS.

27,000 square feet, with a capacity of about five million feet of lumber. The shed is built on open pillar work, with open work under its roof, so that at all times there is perfect circulation of air, as well as protection from rain, etc.

#### GLUE A VERY IMPORTANT FACTOR.

Glue plays a very important part in the making of a piano. It may be surprising to know that, although the Steinways for fifty-four years have used only the Peter Cooper glue, every shipment of glue received at the factories is subjected to a chemical analysis, and unless it conforms perfectly to such a test it is thrown out.

A similar test is made of the mixture of iron, which, as used to-day, is identically the same as that used forty years ago, and which has never been improved

upon. This mixture of iron is used for making the plates, and has a transverse strength of between 42,000 and 48,000 pounds to the square inch.

All the tests are made in the offices of Mr. A. J. Menzl, who is in charge of the Riker Avenue factory, and who has been making Steinway pianos for twenty-five years, and is an expert in every sense of the word.

#### AN ENTIRE ABSENCE OF "HUSTLE."

One thing very noticeable as one goes through the Steinway factories is the entire absence of hurry on the part of the workmen. They take plenty of time in preparing the wood products, and do not allow themselves to be disturbed in any way while at their tasks. They are not urged to make haste, and would probably rebel if they were required to relinquish their work before they, and not the foreman, were satisfied with it. Nearly all of these men have been making Steinway pianos for years. Many of them began as boys and are now grown old in the service. It is not uncommon to meet men who have been there thirty or forty years, and some who have spent half a century there. As one old gentleman put it:

"We never think of leaving. We live and die right here."

A great many of the men now thirty and forty years in the Steinway factories followed in the footsteps of their fathers, many of whom came to this country at the behest of the first Steinway, from Germany.

#### MANY BUILDINGS MAKE VAST PLANT.

The Riker Avenue factory, complete, includes a two-story administration building, a five-story piano case factory, a four-story drying kiln, a two-story sawmill, a three-story metal factory, a foundry, a plate-casting storage building, a plate-casting shop, a plate-japaning and bronzing shop, a glue-boiler-house, three lumber storage buildings, a boiler-house, a pump-house, a coal and coke shed, and a foundry sand shed. One hundred and twenty-two machines are in use in the cabinet and metal shop. They are driven by 9,000 feet of belting.

Nearly five hundred men are employed at the Riker Avenue factory, who furnish about \$1,000,000 worth of the raw product to the Ditmars Avenue factory, where the next steps are taken in building the Steinway pianos.

In the Ditmars Avenue factory the piano cases are assembled, the sounding-boards placed in them, and the varnishing done. This factory covers several city blocks and is three stories high. The sounding-boards are made in this factory. There are some wonderful machines to be found here. The immense rubbing machines are so perfect that they do the fine rubbing equally as well as could be done by hand. The varnishing process in vogue is the most thorough and complete to be found anywhere.

#### GOING THROUGH THE VARNISH ROOMS.

Every grand piano case receives six coats of varnish. After the varnishing has been completed the pianos are put away for two or three months, and then they are ready to be rubbed. And such a rubbing they do get! They are rubbed until they are as smooth and as brilliant as a mirror, and when the rubbers are through with them they get the last coat of varnish, technically known as the "flowing coat," and then, after drying several days, they are sent to the big factory in Manhattan where the action and keys are placed in them and all the fine work necessary to make them playable is done. Here also the cases are hand polished.

After going through several departments the pianos reach the finishing floor, which is in charge of Mr. Otto Koch, who is seventy-five years old, and who has been making Steinway pianos for more than fifty years. He has seen more Steinway pianos made than any other living man. Mr. Koch came to this country shortly after the founder of the Steinway house, and from the first day he landed here until the present time he has been employed in the Steinway factories.

#### EVERY FOREMAN HAS AN "UNDERSTUDY."

While every department in the Steinway factories is presided over by men who have devoted their lives to making the famous piano, each executive has an

understudy, so to speak, and in the event of illness or death of any of the heads of departments their places are immediately filled by men who have studied under them and who are capable of carrying on the work without the slightest deviation from the original plan.

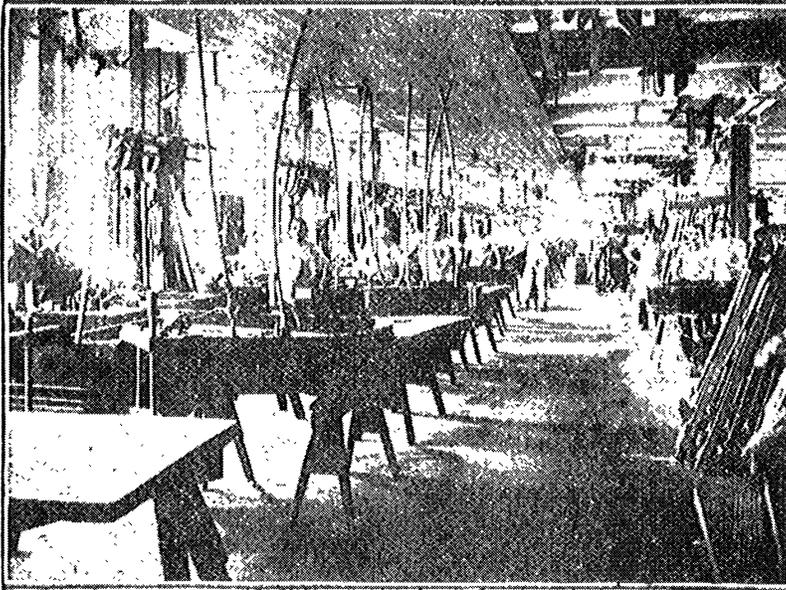

In all the Steinway factories, including the immense export factory which is located at Hamburg, Germany, there are about 2,000 men employed, and every man is as loyal to the house as though it were his own. They all seem proud of their connection with the firm, and regard their work as a labor of love. Harmony prevails throughout the great Steinway industry from the heads of the house down to the lowliest employee.

There are about 6,000 Steinway pianos made annually. Four thousand are made here, averaging 2,400 grands and 1,600 uprights, and 2,000 are made at Hamburg.

#### HOW A SOUNDING-BOARD IS MADE.

The sounding-boards that go into the Steinway pianos are doubtless the best in the world. This part of a piano must be perfect, and the manner of making them is very costly because of the waste necessary.

The Steinway sounding-boards are made in the Ditmars Avenue factory. There is one man, a grizzled old fellow, in this factory who has been selecting the lumber

DITMARS AVENUE FACTORY  
"BELLYMEN" PUTTING SOUNDING-BOARDS IN GRAND PIANOS.—BENDING POLES  
ARE REQUIRED FOR THIS IMPORTANT TASK.

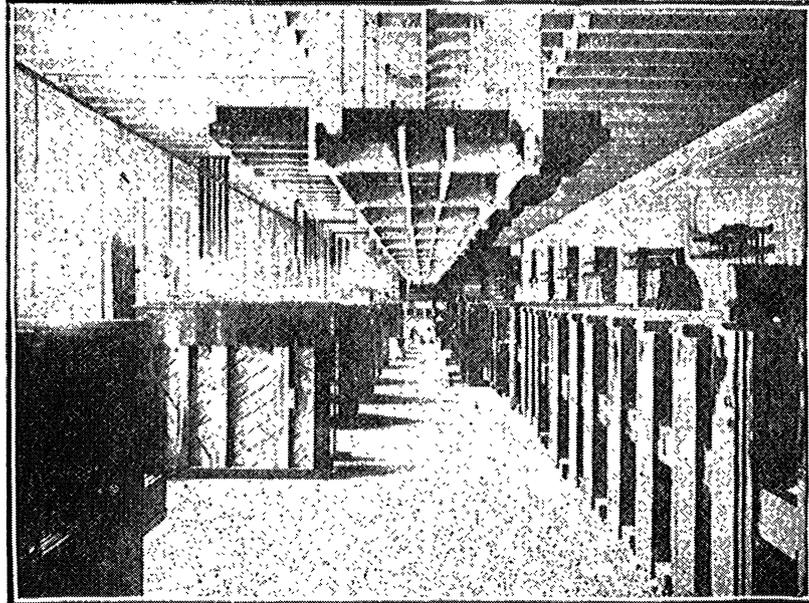

for the sounding-boards for many years. He does nothing else. The sounding-boards are made of about seventeen small boards, but when they are finished and placed in the pianos they look like a single board, so perfectly are the small pieces mated. In matching the small boards the expert in charge throws out nearly half of them, because they do not conform as to grain and color. The boards thus

thrown out, despite the fact that they have been in treatment for years, are an utter loss, so far as the sounding-boards are concerned. The sounding-boards are always made of spruce lumber.

When the sounding-boards are placed in the pianos and fastened to the plate, the inside of a Steinway piano is as though it were made entirely of one huge piece. This is due to the many patented devices controlled by the Steinway house, which have been the result of years of experiment.

#### IDEAS OF FOUNDER ARE STOLEN.

When the original Steinway came to this country and began the manufacture of pianos—some fifty-five years ago—he failed to secure patents upon several of

A ROW OF THE POPULAR VERTEGRANDS AT THE FIFTY-THIRD STREET FINISHING FACTORY.

his great improvements, with the result that many competitors appropriated his ideas and began the manufacture of "imitation Steinways," for commercial purposes alone, with the result that the strictly commercial piano came into being, and is to-day sold by the thousands to persons who know a piano only by its outside appearance, and cannot understand why the Steinways demand such a good price for their product when something that "looks as nice" can be obtained for much less.

Some of these commercial pianos are made from lumber that is not seasoned two weeks, and in many cases actually fall apart after being used a short time. Such pianos are merely "assembled." For instance, a commercial piano manufacturer, who is after only the money, buys his piano cases of one firm, his plates of another, his action and keys of a third, and so on until he acquires all the parts. Then he throws them together after a fashion, and they are ready for sale. This sort of manufacturer seldom puts his own name on his "assembled" products.

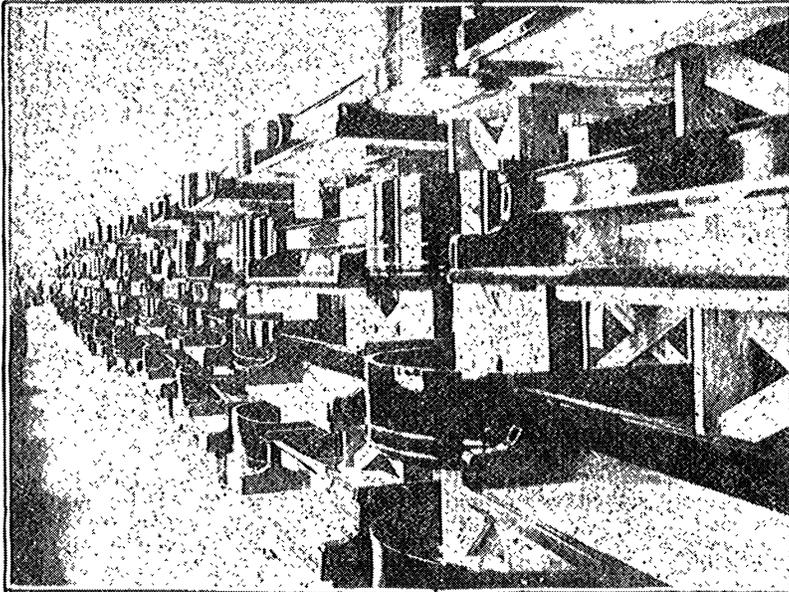

He puts them out under what is known as a "stencil name," or he will put a dealer's name on the piano, and the dealer palms it off, in many cases, as a high-class piano that is made especially for his esthetic trade.

#### MUCH TRICKERY TO ENSNARE THE INNOCENTS.

There is more trickery in the piano industry from the commercial standpoint than in any other, and it behooves the innocent purchaser to be sure of his ground before he undertakes the purchase of a piano.

The Steinways are the only piano manufacturers in the world who make every component part of their piano. This principle was established by the founder of the house, and has been rigidly adhered to ever since.

The history of the Steinway family, founders of one of the greatest industries

800 GRAND PIANOS IN ONE ROW AT DITMARS AVENUE PLANT.

in the world, is an interesting one. There are at the present time seven members of the Steinway blood conducting the business of the firm and perpetuating the Steinway traditions.

#### ROMANTIC HISTORY OF FIRST GENIUS.

The first Steinway to build a piano was Henry Engelhard Steinway, who was born February 15, 1797, in Wolfshagen, a forest town of the Hartz Mountains, in the Grand Duchy of Brunswick, Germany. He came of a family of soldiers, many of whom had gained high distinction in the army. Owing to war and a domestic tragedy, he found himself the sole survivor of his family at the age of fifteen and without means. His father and three older brothers had been struck dead by a bolt of lightning while he was walking with them in a forest. He was unhurt by the horror, many believers in Destiny to this day believing that he was saved that he might perform a greater service to the world.

Penniless and homeless, the young man entered the army, where he served

until he was twenty-one, when he was honorably discharged. After leaving the army he settled in the hamlet of Seesen, at the foot of the Hartz Mountains. He married in 1825, and a year later his first child, a son, was born. This boy was christened C. F. Theodore Steinway, and he afterward became the great piano scientist and inventive genius who designed the world-famed Steinway grands.

#### AMBITION FOR HIS FIRST SON.

Henry E. Steinway had always been a lover of music, and was somewhat of a musician. Upon the birth of his son his greatest ambition was that the boy should become a musician, and, being a cabinet-maker, he set to work at once to build a piano upon which the lad was to learn to play. He worked day and night upon the instrument, and when it was completed he was the proudest father in the world. He had no thought of becoming a piano manufacturer at that time, and it was not until one of the rich men of the town saw and heard his piano that Steinway began to see a future in the piano trade. Instead of the piano becoming an instrument for his son to play, it was sold for a high price, and Steinway at once entered into the business of manufacturing pianos. He improved upon every piano of that day, and raised the status of the instrument from a state of almost worthlessness to a standard that attracted the attention of the civilized world.

#### A LARGE AND HAPPY FAMILY.

For many years Henry E. Steinway continued a piano manufacturer in Seesen, and became the father of a large and happy family. The second child born was a girl, Doretta Steinway, who later became the mother of Henry Ziegler, at present the head of the Department of Inventions and Construction of the Steinway industry. His next child was Charles Steinway, the father of Charles H. Steinway, now president of Steinway & Sons, of Frederick T. Steinway, now vice-president of the company, and of Henry W. T. Steinway. The next child was Henry Steinway, Jr., and then came Wilhelmina, the second daughter of the founder of the Steinway house.

William Steinway was the next born, and then came Albert Steinway, the last of the seven children, every one of whom was to play an important part in the great business their father had founded.

The revolution of 1848 greatly crippled the business of Henry E. Steinway in Germany, and he decided to emigrate to America. Careful in all things, he decided to investigate the new country before making the move, and in 1849 he sent his second son, Charles Steinway, to this country on a tour of inspection. The young man's reports to his father were so favorable that the entire family, with the exception of C. F. Theodore Steinway, came to the United States. C. F. Theodore remained behind to complete unfinished work, and in a few years more he joined his father and brothers in this country.

#### FATHER AND SONS BECOME JOURNEYMEN.

For three years Steinway and his boys worked as journeymen in piano factories here in order that they might learn the exact conditions existing in this country, and then they started the business which has been the most wonderful in all the piano industry.

An insignificant building on old Varick Street was the first Steinway factory in this country. The first pianos made here and turned out from the Varick Street factory created a furore among the Americans. It was not long after their first efforts that the Steinways were famous all over the world. They moved to a larger factory on Walker Street, and then, a short time afterward, built the New York City factory at Fifty-third Street and Park Avenue.

The Steinways invented the "overstrung system" for the piano. They invented other great improvements that made the tone of their pianos superior to all others. The crowned heads of Europe, by royal warrant, appointed the Steinways as

makers of their pianos, and they are still making the pianos used in the homes of royalty, as well as for the greatest musicians of the times.

#### BOYS COMPELLED TO WORK AS APPRENTICES.

Henry E. Steinway compelled every one of his sons to go into the factory and learn how to build a Steinway piano. They in turn compelled their sons to work at the bench until they were capable of turning out the perfect Steinway. In this manner the great house has continued to develop members of the blood, and consequently the pianos are made according to the precepts of the originators.

The sons of the present generation learned the trade at the bench. They were taken into the big factories as mere apprentice boys and, under hard taskmasters, were required to learn every step of the piano-building business. Each of the

boys graduated, and, in addition to their proficiency in piano building, they were all given a thorough education in music. These boys of the present generation are preparing to take the reins of their elders, and in future years will guide the destinies of the house.

#### SEVEN MEMBERS OF THE BLOOD NOW ACTIVE.

The seven members of the Steinway blood who are now actively engaged in conducting the affairs of the company are Charles H. Steinway, President; Frederick T. Steinway, Head of the Department of Manufacture; Henry Ziegler, Head of the Department of Inventions and Construction; William R. Steinway, Assistant to President Charles H. Steinway; Theodore E. Steinway, Theodore Cassebeer, and Edwin Cassebeer. The last four named are the fourth generation of Steinways.

Steinway Hall, on Fourteenth Street, in this city, once famous as the country's greatest music hall, while practically devoted entirely to warehousing purposes now, nevertheless is still the most noted music centre in the United States, being the acknowledged rendezvous for musicians from all over the world.

## AN EXQUISITE MUSICAL INSTRUMENT WITHIN REACH OF YOUR PURSE.

**T**HE Laffargue Piano is pre-eminently a high-grade instrument at a moderate cost. In its manufacture no detail has been considered too small to be overlooked by the manufacturers. Each particle of material that enters into its construction is thoroughly examined, and, unless reaching the required high standard of excellence, is rejected; so that a purchaser of a Laffargue Piano may rest content that there is no better instrument on the market.

The firm that makes the piano takes pride in putting only the best products of up-to-date science into it. The same uniform care is used in selecting the material, whether it be the plate, the soundboard, or the wires, or the case, the action keys or any other part.

A point regarding which particular attention is paid, and which has much to do in producing the perfect musical tone of the piano, is the testing that is made of all its materials. When once the perfect material is found it is never changed for a cheaper quality. The resulting tonal qualities, therefore, never vary, and one Laffargue Piano is of the same lofty standard of perfection as every other one.

One of the most noteworthy features of the piano is its durability. It has an unexcelled reputation for wearing well and for standing long in tune. In order that these high attributes may continue, the heads of the firm have always given to each instrument built at the factory their personal supervision. No piano is ever shipped out of the company's plant that has not received this careful inspection. It is a matter of congratulation among the firm's chiefs that the established fame of their instruments, as undoubtedly the best value for the money, is still maintained.

While the firm has turned out a most beautiful looking piano, the directors adhere to the principle that such an instrument should not be selected for its looks, but for its durability and quality, so that it is a cardinal rule with them never to sacrifice tone and lasting qualities to mere outward appearance.

Eminent musicians have frequently commented on what they term "the unrivalled tone" of the Laffargue Pianos. The firm explains this splendid feature by the care that the scale receives. It was only after the most untiring efforts that this perfection of the scale was attained. The musical and refined treble, the long vibrating and single qualities, and the full and smooth bass, found only in the very best makes of pianos, are accentuated in these instruments, where they are found in their fullest measure.

This firm makes a special point of having its employees masters of their craft. Great care is taken in selecting men to do the delicate work required in the building of these pianos, as a bungler might spoil the best efforts of his co-workers. The men are put through a thorough examination before they are permitted in the factory.

And now a word about the Laffargue Piano Player. This is an ideal instrument for the home. It combines the piano and the automatic player in such harmony that every shade of music, from the most delicate pianissimo to the most intense forte, is equally at its command. The automatic control is perfection, and by its intelligent use the rendition of the most classical compositions is easy. The adjustments of the mechanical parts of the Player are so cleverly contrived that even a child may find no difficulty in playing the instrument. A feature of the Player is that it retains all the famous singing qualities for which the Laffargue Piano is distinguished.

So highly does the firm think of its piano that with each sale of one it gives to the purchaser a guarantee for six years, agreeing to put it in good repair at the factory, provided the instrument has not been subjected to abuse.

An inspection of the Laffargue factory is most interesting. To see the men actually at work putting into the case the wires and other parts is an impressive sight. One cannot but be struck by the great care and pains taken to have everything just right. One may well say, when he sees these clever experts at work, that they are all geniuses, for they have "such an infinite capacity for taking pains," which is the accepted definition of a genius.

The makers of this instrument are always pleased to send information, catalogues, etc., to inquirers. The company's firm name is Laffargue & Co., and their factory and main office is at One Hundred and Thirty-fourth street and Southern Boulevard, New York.

## An Old Musical Enterprise that Keeps in the Van of Modern Triumphs and Achievements.

**W**HEN a musical instrument has stood the test of time and has steadily gained in popularity and sales throughout a long term of years, sterling merit is behind this triumph. History tells us that it is only the fittest that survive, and this is as true of musical instruments as it is of races of mankind. The Behning Piano is an instrument that, placed on the market years ago, has steadily won its way to the foremost ranks of the trade, and each year sees more of these splendid pianos sold.

The Behning Piano is one of the oldest makes in the country. It is noted for its exceptional wearing qualities. In tonal quality, in sweet, singing properties, it is at the very summit of the piano making art. In appearance it is very handsome, and both quality of looks and quality of musical tone are of the kind that endure. This piano will stay in tune longer than any other on the market with proper care.

Since the company first began to manufacture pianos it has made it a maxim of its business policy to keep in the very fore of the development of the piano-making science. Whatever new was discovered or invented that was found superior to the old in helping to turn out a perfect instrument was at once adopted, extra cost not being considered at all. The object has always been to produce the most perfect musical instrument possible, the question of expense being of minor importance in the eyes of the firm. At the same time, the cost to the purchaser has been kept down to the lowest possible point, so that in the Behning Piano there is more value than is to be found in other makes.

With its progressive policy, it was most natural that the company should take up the Player-Piano when the invention first appeared on the musical horizon. At once the firm went to work to turn out the most perfect Player-Piano that could be made, experts being sent wherever in the world the development of these inventions could be studied to the best advantage. In these pianos the player part comes in the natural size piano, and is the only one that does. This is not true of any other make.

There is no weakening of any of the parts of the piano in cutting down the thickness of the back, which other players cut down from one-half to three-quarters. The player-action can be taken out in less than a half-minute's time, exposing all the strings, so that a new string can be readily put in. This accessibility makes the instrument very handy for tuners to get at. It is very easy to produce the slightest pianissimo effect, and pressure with the feet in an instant brings out the fortissimo.

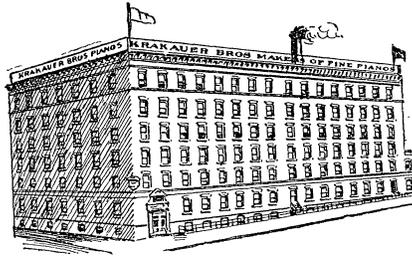

The company makes a specialty of providing for the needs of persons who dwell in small quarters. The firm manufactures the smallest Player-Piano on the market, as well as the larger sizes. It makes one as small as four feet four inches in height by twenty-six inches in depth. Another convenient size that is much sought is four feet eight and a half inches in height by twenty-seven in depth.

A recapitulation of the peculiar advantages of the Behning Player-Piano are: There is no increase in the size of the case; no decrease in the thickness of the back; it pumps as easily as it can be taken apart; the entire piano is accessible for tuning, voicing, regulating, and replacing of broken strings.

In producing what they consider the most perfect Player-Piano on the market the officials of the Behning Piano Company have had in mind the growth of the musical spirit in America. They say that only men in the trade have an adequate conception of the widespread interest in music in this country, and they are convinced that this means that America will soon take the leading role in the musical world. There is a demand for good music on far Western plains, amid fastnesses of the Sierra Madre Mountains of New Mexico, and in the cabins of Alaskan miners. The demand throughout the middle West and the South is very great and constantly increasing. In the cities of the North, Middle, and the New England States it is enormous. The reason that the popularity of the Behning Player-Piano in all these sections is so great is that it does not get out of order and is so easily manipulated. Should any repairing be required, the construction is such that it can be done with very little trouble and expense. The durability of the Player-Piano insures its lasting for years, a lifetime with ordinary attention.

The Behning Piano Company, whose headquarters are at One Hundred and Thirty-first Street and Park Avenue, New York City, always is pleased to give all particulars and information desired.

## The Krakauer Piano is the Product of Musical Genius

THE KRAKAUER FACTORY,  
Cypress Avenue, 136th to 137th Streets.

The business of the Krakauer Piano had its inception under somewhat different auspices from business concerns of to-day. The Krakauer family was one with a talent for music. They were natural musicians. In addition, they had practical ideas about piano-making. They wanted to make an instrument that would interpret music to the best advantage. They made some on these advanced lines, and it was so superior to other pianos that they determined to go in business more extensively. The result is that to-day the most refined homes in the United States and other countries are equipped with a Krakauer Piano.

No better tribute to the excellence of the Krakauer Piano is possible than the enormous popularity that it has gained. Never, since the firm of Krakauer Bros. was formed, has it been able to make enough of its pianos to keep up to the demand. There have always been sheaves of orders waiting to be filled. And they are filled, with as little delay as possible, and it is an invariable experience that the purchasers write enthusiastically to the manufacturers extolling the merits of the instrument.

The Krakauer business has grown so fast that it is now second to none in its line. The factory where the pianos are made is a huge structure, and the State Inspectors have pronounced it the best equipped, the most substantial and perfectly adapted to its needs of any piano factory in the great Empire State.

The men who make the various complicated parts that go into the being of this piano are all leading experts of their several lines. They must have passed a crucial test before they can obtain a place among the brilliant staff of expert workmen. They are all under the personal supervision of the President of the Company, Mr. Julius Krakauer, himself a finished musician.

Besides their rare tone qualities and the absolute perfection of the mechanical working of the Krakauer Pianos, they are beautiful instruments and add charm to the most exquisitely furnished apartments. Their possession is an indication of the refinement of a household.

The prices of the Krakauer Pianos vary from \$400 to \$575, in the cabinet variety, and from \$650 to \$750 in the grands, according to size. They are the biggest value for the money that can be found in the piano trade. The absolute minimum price is charged that will enable the Company to put the instruments on the market. It is conscientiously stated that no greater musical bargain can be found in the world than a Krakauer Piano. This piano will last a lifetime and will retain its vigor and rich tonal qualities during all the years of its use.

In sending your order, kindly specify the date at which you must have the piano, in order that we may use all haste in getting it to you, as our orders on hand are sufficient to keep our factory busy for months ahead.

The Krakauer catalogues will explain in detail the perfection of these instruments and form interesting reading for the music lover.

## HOW A MUSICAL FAMILY PUT ITS GENIUS TO PRACTICAL USE

**T**RAITS, mental and physical, are inherited. We all know how some quality of an ancestor, perhaps many generations back, will crop out in a descendant. The descendants of a seafaring family, though themselves born in the interior, have an eager longing for the sea—they are happier dwelling on the seacoast than among the mountains away from it.

Just so does the love of music run in families. The famous Decker family, of New York, is an instance of this. Music has been the diversion of generations of the Decker family. It is a talent handed down from father to son. It was most natural, therefore, that the Decker family, when seeking a business, should turn instinctively to the manufacture of a musical instrument that should embody all the elements desired by a thorough musician. The late Myron A. Decker, founder of the house of Decker & Son, was a musical genius. He criticised various faults in the pianos of the day, and was seized with the ambition to make a perfect musical instrument. For this purpose he made a deep study of piano-making in all its branches. With this knowledge, superimposed upon a thorough musical education, he set to work to produce the perfect piano.

Just as he studied harmony at the conservatory so he studied the art of making piano wire, gained a complete knowledge of which woods were the best to enhance the tone of the instrument, of how these woods could be seasoned to the best possible advantage. Every mechanical device for improving the quality of a piano was mastered by him, and all this wisdom he handed down to his son, the present head of the firm, Mr. Frank C. Decker. Mr. Frank C. Decker, in turn, is handing this knowledge down to his son, Frank C. Decker, Jr.

The result is that these musicians turn out an instrument that is wonderful in tone, in touch, in richness of volume, in durability, in the elements that go to make a perfect piano. Nor must the beauty of the instrument be overlooked. Its superb case construction, its graceful outlines, its beautiful finish, that appeal to the eye of the artist, make it an acquisition for any home.

Piano making has advanced to such a perfect science that there has been a distinct growth in the musical talent of the American public. The statistics of musical colleges and conservatories prove this. Decker & Sons, Nos. 699-703 East One Hundred and Thirty-fifth Street, New York, have done a great share in spreading this talent throughout the country by the appealing qualities of their instruments.

\*European Plan, †American Plan, ‡American and European Plans.

# THE H. B. CLAFLIN COMPANY

**I**N the heart of the "dry goods district" of New York stands a business house that is pre-eminently above its neighboring business-houses. It is more than a mercantile establishment. It is an institution. If there were a truly competent system of guides to New York, as there is in all the greater cities of Europe, the tourist would be taken to this corner and shown the house of The H. B. Claflin Company, at Church and Worth streets, as one of the things not to be missed in even a hurried inspection of the sights to be seen in the greatest American city.

For this is a clearing-house of the whole dry goods business, East, West, North, and South, for the whole United States. That is not to say that every merchant who comes to town buys all his goods in this one place. It does mean that scarcely a merchant comes to New York without visiting this house, and that every such merchant's visit means the sale of a bill of goods. That would mean a highly desirable state of trade to any other house, and one upon which most mercantile establishments would be content to limit their business. Not so here.

There are hundreds of great manufacturing concerns that require one special thing which is "out of their line." Many shoe manufacturers buy annually a great quantity of a fabric suitable for the lining of shoes from this concern. In the South the great plantations which ship to New York vegetables grown out of the New York season protect their growing crops on chilly nights with a thick muslin cloth. These planters order thousands and thousands of yards from this establishment of that particular cloth. Harness-makers call upon this same market for no end of things, which either go into their finished products or which are demanded by their trade. These illustrations merely serve to make the fact known that hardly a large manufacturer in the United States markets his product without having bought an immense quantity of some special line of goods out of this universal mart. These are a few instances of which people in general would not think, and it is not necessary to mention the thousands of manufacturers whose products are more particularly in the line of goods that this house carries, such as waist manufacturers, skirt manufacturers, garment manufacturers of all sorts, and, in fact, any into whose finished product cotton or woollen fabrics enter.

The United States, through various bureaus which bear upon commerce, even including the State Department, has taken immense pains to develop an export trade for the benefit of the merchants and manufacturers of the whole country. It has been seen that no small part of the circumstances which culminated in the greatest war of our time—that between Russia and Japan—was the negotiations undertaken by the American Secretary of State, Mr. Hay, for securing a market open to all traders of the whole world in Manchuria. The H. B. Claflin Company was interested above all American traders, perhaps above all European traders, in Mr. Hay's successful efforts to establish the principle that not Russia, nor Germany, nor France, nor

England, nor even the United States might be able to fence off so large a portion of the world from the open trading privileges of all merchants and all parts of the world. This great house has intimate and steadfast relations with the great distributing centres of the Chinese Empire, having opened, within the last few years, channels of trade with the largest operating firms, with which the Clafin house does a direct business, instead of, as formerly done, the Chinese business through its Manchester house. This trade has grown to an enormous extent. The firm also ships immense quantities of goods to all European ports. The firm sells to dealers all over the United States, to the largest houses as well as the smallest. The struggling young merchant in a country town who is ambitious comes to Clafin's for aid and advice.

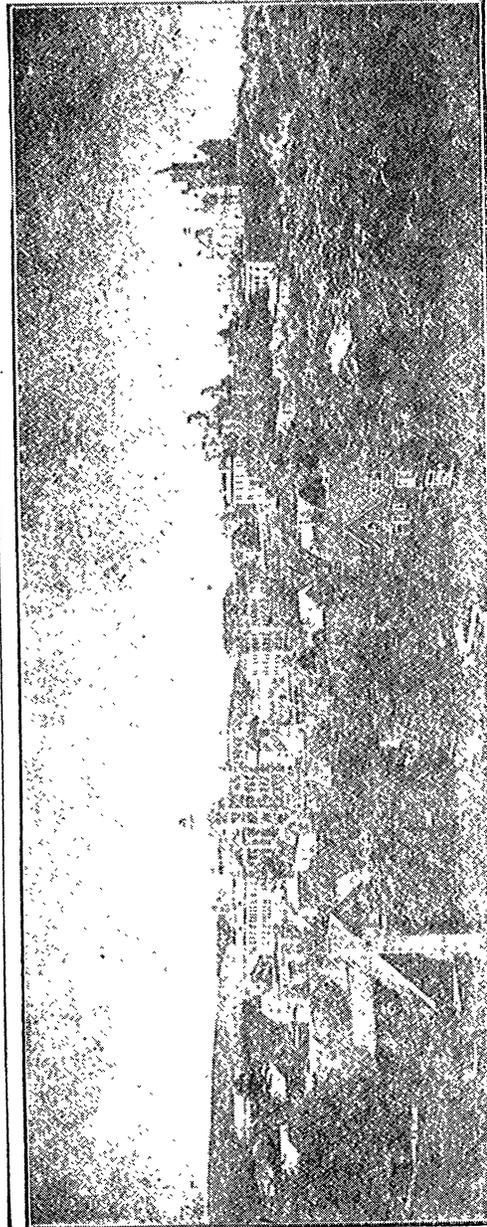

Horace B. Clafin, as a young man, established a retail dry goods business in 1831, and set up in the year after a branch at Worcester, Mass. Mr. Clafin and his brother-in-law, who was his partner, developed a business that outgrew the partnership. In 1833 Mr. Clafin took the Worcester house and devoted the next ten years of his career to that business. Advertising was a new science in those days, but Clafin made the most of it. He devised new methods of extending his business. He "did things" that other merchants had never thought of doing. Boston at that time monopolized the whole business in New England. New York, then a city of less than 100,000 population, was coming to be Boston's rival. His business grew. Rival merchants, who had predicted failure, saw he was right and followed his example. The Boston dealers, seeing their trade carried away, began to try to outbid the favorable terms of New York. The germ of the Clafin house of this day was in the policy that these conditions forced upon the mind of the young merchant of Worcester.

In 1843 he found Worcester a place that he had outgrown and came to New York and with William F. Bulkley started the wholesale dry goods business of Bulkley & Clafin at No. 46 Cedar street. The partners had a cash capital of \$30,000, and each owned property outside of his individual share in the business. Those were times when a business man worth \$30,000 was a considerable personage in the community. Cedar street was at that time the centre of the dry goods business. New York grew and the house grew with it, so that in seven years the young merchants had to look for a place in the new centre. They settled at No. 57 Broadway in 1850. A year later Mr. Bulkley had retired with a comfortable fortune. Clafin formed a new partnership with William H. Mellen and several juniors of the old house, under the firm name of Clafin, Mellen & Co. They moved uptown. They built the Trinity Building at No. 111 Broadway, which only recently has been removed to make way for a "skyscraper." In 1850 this firm's business footed up the enormous total, for those days, of \$13,500,000. That meant that the Clafin idea already shown had become a dominant factor in mercantile business. The firm was at the head. It has stayed there ever since. That development made necessary another move uptown. The firm settled on the block where its present quarters are—Church and Worth streets and West Broadway. Mr. Mellen retired in 1864, and the name of the house became H. B. Clafin & Company. In 1866 the business had grown to a total of \$64,000,000 sales, a phenomenal figure. After the war it was plain to some far-sighted merchants that business conditions were about to change with the changes wrought by the new conditions. Mr. Clafin saw that a revolution in his own business was necessary if he would keep the commanding position in the mercantile world. Before this the jobber, the importer, the manufacturer, each had occupied his own field. Mr. Clafin's judgment was that his business to succeed must combine the functions of all three. The house of Clafin now combines those three functions, as it has since the day when its founder first put his ideas into practice. It would be a long and difficult story to tell how, year by year, this business acquired control, one by one, of mills and factories, marketing their entire product; of how it embarked into manufacturing enterprises that have since, in its hands, become great among manufacturing interests.

This growing business means an expanding organization. In a smaller concern of the ante-bellum days one man could do all the buying, fix the prices, command all the agencies in selling. In the concern of to-day, with all its ramifications, a great system with many branches, each with a responsible and trusted head, has necessarily developed. The concern must maintain central buying bureaus in the great markets of the world. Its men must have specialized knowledge of markets in strange and unfamiliar parts of the world. Its chief must study possible and probable demands which are swayed by the caprices of fashion.

It should be said here that at the death of Mr. Clafin, in 1885, the business was in the full tide of its still advancing career. The business for five years was carried on by his son and the surviving partners. In 1890 the present corporation was formed. Its president is John Clafin, son of the founder.

One of the long-pursued ideas of the house is to supply the demands of any trade, no matter how such demands may differ from those of the general run of its trade. The buyer coming from Mexico to New York is not suited with the goods which find ready sale, for instance, in Sixth avenue. He wants merchandise that meets the taste of his own customers. In the Clafin stock he finds not only the things he knows are salable at home, but an organization which supplies him a seller who is familiar with his home requirements, who speaks his language, and who understands whatever differences there may be in the trade conditions of his own country as compared with those in New York. The buyer from Mexico is cited merely as an illustration of the broadness of the system. South America, Central America, the West Indies, South Africa, Australia, India, China, Japan, indeed the most remote countries of the world, send traders to New York, assured that in this immense institution they will find an accurate understanding of their customs and their customers.

# SYRACUSE UNIVERSITY.

**S**YRACUSE UNIVERSITY, New York, as the name implies, is situated in the city whose name it bears. The location is unusually healthful and attractive, surveying the hills of Onondaga, the valley of the Indian Reservation, with its remnants of several tribes, and Lake Onondaga.

The University comprises six Colleges: The usual College, which enrolls more students than any College in the State, with elective courses covering the entire range of College learning; the College of Fine Arts, with courses in Architecture, Belles Lettres, Music and Painting; the College of Medicine, with thoroughly furnished laboratories; the College of Law, within easy access of the courts and great law libraries; the College of Applied Science, with courses in Civil, Electrical and Mechanical Engineering, in new buildings and with the latest machinery and apparatus; and the Teachers College, which occupies fourteen acres covered with rare trees and shrubbery. Syracuse furnishes a much larger per cent. of teachers to the public schools of New York than any other institu-

tion in the State. Graduate courses are given in the various departments. The campus comprises one hundred acres. The buildings are large and imposing and the most of them having been built recently are adapted to the most approved forms of instruction.

The Library, the gift of Mr. Carnegie, is furnished with about twenty seminar rooms. The School of Library Economics is in this building.

The dormitories are sanitary and planned for the safety and comfort of the students. It is the plan of the University to furnish board without profit, securing to the students as much as possible for the price paid. The last dormitory erected was opened this year. It comprises five fireproof apartments accommodating forty students each. It has been planned and constructed with great care. The occupants are self-governing.

The University furnishes its own heat, light and power from a Central

Heating Plant, thus eliminating the danger from fire in dormitories and recital buildings.

The Library is endowed with \$250,000. Books, therefore, are being added constantly.

The museums are receiving frequent additions of illustrative material.

The University is non-sectarian, but positively Christian in ethical requirement and influence. The Christian Associations are vigorous organizations. The students select church attendance according to their religious preferences. The usual College sports are encouraged. The physical instruction is systematic and seeks to secure the sound body for the sound mind.

A stadium of great proportions and expense has recently been erected. It

will accommodate over 20,000 without extra seatings. The largest College gymnasium in the country is now in process of erection.

Rowing has received much attention, and the crews of the University have given good account of themselves at Poughkeepsie.

The faculty comprises 220, representing more than seventy of the leading Universities of Europe and America. The student enrollment is about 3,200.

The plans for the future call for more buildings and further equipment. Six buildings were in process of erection the past year.

of New York and a little more than a night of Chicago, in a city that is very near the top of the list for healthfulness, in a convention town to which come many instructive conventions, secures to Syracuse University many advantages and the certainty of a great future.

There are many opportunities for self help, and the fees are so moderate and the student habits are so economical as to render it possible for any student of grit and courage to successfully complete a College course.

While self-government is encouraged, sound morals and careful habits are regarded as prerequisite to the soundest and safest scholarship and are insisted upon uncompromisingly.

# THE BOWERY SAVINGS BANK

## OF NEW YORK

More Than One Hundred Million Dollars in Its Vaults

No Similar Institution in All the World Has Such an Immense Volume of Deposits

**T**HE Bowery Savings Bank of New York City, located in the very centre of Gotham's famous East Side district, is the largest and most successful savings bank in the entire world. This wonderful institution has a depositors' list of more than one hundred and fifty thousand, which is made up of representatives of every race on the globe.

Founded for the sole purpose of protecting the savings of the thrifty poor, The Bowery Savings Bank has never deviated from that purpose in its long existence, and to-day stands as a monument to the nation's prosperity, and furnishes an irrefutable argument of the thrift and saving habit of a large proportion of the masses.

Absolute confidence is the foundation rock upon which The Bowery Savings Bank stands, and there is not one of its depositors, no matter how lowly, but knows that his or her individual interests are perfectly safe therein. There is, moreover, a distinctly human side to this famous bank, which is little dreamed of by those not cognizant with its working. It is constantly reaching out a helping hand to the thousands of struggling men and women who are on its rolls, inviting them to economize and save. If a depositor—who is withdrawing his money apparently to put into some wild-cat scheme—will listen to advice, he is invited to "talk the matter over with the president." The depositor nearly always consents to do this, in which event, if he is about to enter into some foolish speculation, he is usually saved. The president of this famous bank and all of its officers are always on the alert to protect the depositors against the thousands and one pitfalls that beset the unsophisticated, and that is one very potent reason why the bank has grown to be the monarch of the savings bank world. This one bank has greater savings than all Canada, all Norway, or all Holland; it has one-tenth as much as all Great Britain. It is paying its depositors \$4,000,000 a year on their savings. This is a record unparelled in the world.

Any person may become a depositor in The Bowery Savings Bank, no matter where he lives, so long as he can write his name in English. That is the only requirement. Thousands of depositors transact their business with the bank by mail, and are thus enabled to participate in the splendid interest on their deposits, that is made possible by the gilt-edge securities held by the bank, which is in possession of the highest character of collateral to be obtained. Under the laws of New York, savings banks are subjected to rigid control. The management is in the hands of men of known integrity, whose services are entirely gratuitous, and who delight in conserving the interests of such an institution. In all other States the funds of a savings bank may be loaned much as by commercial banks, while in New York the restriction imposed by the statutes assures absolute safety.

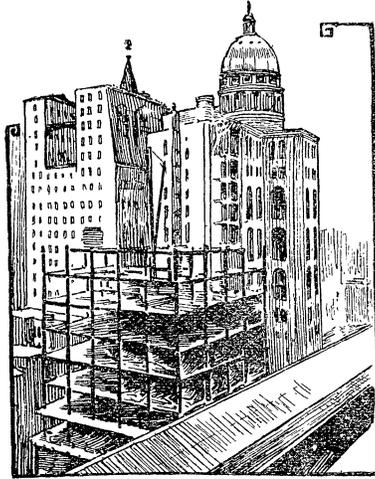

The "Banking-by-Mail" system has been conducted by The Bowery Savings Bank for many years. It is said that this bank originated this method of banking in the State of New York.

To send a dollar from any point in the United States to The Bowery Savings Bank by Post-Office Money Order costs five cents, including the stamp to carry the letter, while, if one lived in New York City, in nearly every case it would cost twice that amount to get the same dollar to the same bank because of street car fare. So the out-of-town depositor has really the advantage over his New York brother in the question of strict economy.

Mr. William H. S. Wood, one of the most prominent men in New York, is president of The Bowery Savings Bank. Every working day of the year he is at his desk in the big bank building on the Bowery, and he knows every detail of the vast machinery that keeps the institution going, and keeps it ahead of all of its fellows. Mr. John J. Sinclair, also a splendid citizen of New York, is the vice-president, and Mr. Robert B. Woodward, equally eminent, is the second vice-president. Mr. Henry A. Schenck, the comptroller, is a man of marked ability.

We earnestly advise all our readers to send for a copy of this bank's little pamphlet entitled, "Banking by Mail," which will be forwarded free upon request to The Bowery Savings Bank, 128 and 130 Bowery, New York.

## Some of the Important and Successful Building Operations of D. C. Weeks & Son.

REARING STEEL FRAMEWORK OF  
NEW PULITZER BUILDING,  
JULY 25, 1907.

**E**ARLY in the Spring of 1840, De Witt Clinton Weeks came to the city and started in the building business. Since that time the firm he established has been continuously in business—the present head of which is Mr. Francis M. Weeks, the son of De Witt Clinton Weeks—and many large operations and finest class of residences have been built by it. The Fourth Avenue Presbyterian Church, Fourth Avenue and Twenty-second Street, is an existing monument of the work of De Witt Clinton Weeks.

The old St. Thomas Church, at the corner of Fifty-third Street and Fifth Avenue, built in 1869 and burned a few years ago, was the first building erected under the firm name of D. C. Weeks & Son. Prior to that time De Witt Clinton Weeks had been operating under his own name. The result of the fire, which completely consumed everything burnable in the building, leaving the walls practically intact, is proof of the claim of the Messrs. Weeks that nothing but the very best of

workmanship has ever entered into their buildings since the earliest days of the firm's operations. The ruins of the old St. Thomas Church stand to-day as a monument to this fact.

The first building of the American Museum of Natural History, the old Queens County Court House, Long Island City, are other buildings constructed about the same period.

Of the modern work of the firm the following are a few examples of its successes:

The estate of G. W. Vanderbilt, the well-known "Biltmore," on which work was carried on continuously for seven years.

The Morton Building, at the corner of Ann and Nassau Streets. This is a twelve-story building, of which the foundations were laid in October and the tenants were moving in on the first of the following May.

The residences of Mr. Samuel Thorne and John W. Sterling, on Fifth Avenue, between Seventy-second and Seventy-third Streets, which are among the best examples of the work of the late Bruce Price, Architect.

"The Marble Twins," two residences with seventy-five feet frontage on Fifth Avenue, between Fifty-first and Fifty-second Streets.

Residence of Mr. Morton F. Plant, corner of Fifty-second Street and Fifth Avenue.

Alterations to the residence of Mr. G. W. Vanderbilt, at the corner of Fifth Avenue and Fifty-first Street.

Residence for Mr. Robert Olyphant, East Fifty-second Street.

Residence for Mr. George W. Blumenthal, West Fifty-third Street.

Residence for Mr. Anson R. Flower, 601 Fifth Avenue.

Residence of Mr. W. K. Vanderbilt, "Idle Hour," Oakdale, L. I.

Residence of Mr. Oliver Harriman, White Plains, N. Y.

Winter Club House, Tuxedo Park, N. Y.

Two ten-story buildings for Huyler's Candy Factory.

Ten buildings for the New York Telephone Company, New York City.

Two buildings for the Central New York Telephone Company at Syracuse.

One building for the Chesapeake and Potomac Telephone Company at Baltimore, Md., on which the world's record was made for speed of construction, as several stories of a nine-story building were ready for occupancy 149 days after the excavation was started.

On a telephone building on East Twenty-ninth Street, between Fourth and Madison Avenues, one of the most novel engineering feats ever attempted in the building line was carried out by this firm. The supporting walls for four floors and the roof of the building were entirely removed and the floors were supported by iron rods fastened to beams at the top of the building, which were supported by heavy timber towers. The new addition was completed and the floors picked up and connected with the new structure, and the whole building completed without so much as cracking the plaster in the old portion.

Among the firm's heavy contracting work the foundations for the Seventy-fourth Street Power House of the Manhattan Elevated Railway Company and the foundations for the Port Morris Power House, supplying power for the New York Central Railroad Company's Grand Central yards, which included cofferdam work, heavy earth and rock excavation and an enormous amount of the piers going down rock foundation.

ing of New York's landmarks, will be retained, and so will the front elevation—but the enlarged building will give THE WORLD a magnificent business office on the main floor for the adequate transaction of its increased business, which can with difficulty be taken care of in the cramped quarters now occupied. There will be editorial and composing rooms of nearly double their present capacity, and there will be a great press room, sixteen feet high, in which will be installed presses of the largest and most improved pattern. New electric devices for driving power, new elevators, new systems of ventilation and water supply, new decorative effects—in a word, an enlarged and completely remodelled plant for the production of a great newspaper, and one of the most complete and convenient as well as beautiful office buildings in the country.

The enlarged Pulitzer Building fills the whole block bounded by Park Row, Frankfort Street, North William Street and the approach to the Brooklyn Bridge. The New York Press Club and the Lorillard estate owned the land on which the new addition is nearing completion, from whom Mr. Pulitzer purchased it. No. 12 Frankfort Street, included in this plot, was the birthplace of the New York Staats-Zeitung. Historical associations are also

connected with the site of the original Pulitzer Building. The first mention of the spot in the annals of New Amsterdam was in 1642, and it is known to many living New Yorkers as the location of French's Hotel.

In the construction of the enlarged building Messrs. Weeks & Son had several difficulties to overcome. For instance, that portion of the site which is bounded by the approach to the Brooklyn Bridge was troublesome when the foundations were being prepared. They had to dig down under the bridge approach wall for a distance of eighteen feet and underpin it, but this was accomplished without the slightest interruption to the Bridge traffic, a minute's delay to which oftentimes means an hour of congestion. The tests for the foundations were of the most severe character. A block of concrete two feet square was fitted into the earth as the base of the excavation. Fifty tons was loaded upon this small block, and there was practically no settlement, proving conclusively that the structure would stand upon virtually a foundation of solid rock.

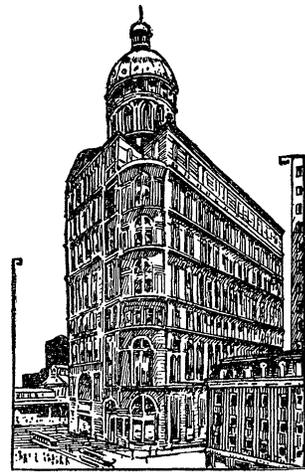

The most serious difficulty encountered by the contractors was in attaching the new building to the old; because the welding had to be accomplished without interruption to the work of publishing the newspaper and without inconvenience to the many tenants occupying the old building. The taking down of the old east wall, the cutting off of about six feet of the old building and the joining of the new and the old, were accomplished substantially without a hitch. In one instance part of the old wall had to be torn down before the steel skeleton of the new building was started. The smokestack in the old building was left standing, and when the steel skeleton was finished the smoke from the old building was turned into the new stack, which had risen with the steel structure of the new building. Then the balance of the old wall was removed, the floor beams fitted together and the welding of the two mammoth buildings was completed.

In another instance it was found necessary, in order to avoid interference with the publication of the newspaper, to build a new floor under a line of autoplate machines, which were at the time being operated to the fullest capacity.

The cost of the new Pulitzer Building, without equipment, will be in round figures about One Million Dollars. Briefly, it is a steel skeleton, with concrete floors, strong enough to stand the weight of any machinery desired to be placed upon them. The outside walls are of granite, with terra cotta and brick trimmings. The window frames, sashes, etc., are of copper; all the interior partitions are of fireproof tiling—in short, a thoroughly fireproof, earthquake-proof structure.

The greatest care has been exercised in the construction and assembling of the steel used in the erection of the skeleton to prevent flaws or rust, with the result that it is absolutely perfect. After the steel had been painted it was not exposed to the weather or loaded for shipment until it had been carefully inspected and the paint found to be thoroughly dry. At no time after the application of the first coat of paint was the steel laid on the ground, but each part was placed on skids or trestles, and in the handling and unloading extreme caution was observed to avoid scraping off of the preservative coating, and even in transportation, to avoid nesting of the pieces, packing material was placed between them. After the erection of the steel skeleton the work was thoroughly inspected, cleansed, and repainted. The tests for sustaining weights were of the most stringent nature and have been more than satisfactory.

In the new building six large elevators and two smaller ones will take the place of the three elevators in the old building. Two smaller elevators are to be so equipped that they may be easily turned into service for general passenger use at rush hours in the great building. There will be new systems of heating, ventilating, lighting, and new plans of decoration, which will bring the enlarged Pulitzer Building up to the standard set by the contractors, if it does not place it ahead of the very best of the many beautiful structures erected by this extraordinarily successful and competent firm of builders.

THE RECONSTRUCTED AND ENLARGED PULITZER BUILDING, COMPLETED MAY 10, 1908.

# OSOL, DENATURED ALCOHOL

Remarkable New Fuel that Gives Perfect Heat and  
Light at Very Small Cost.

**W**HEN the United States Government recently removed the tax on denatured alcohol, it conferred a great boon on the American people. It gave to them a fuel at once far superior to electricity, coal, gas or kerosene, and much cheaper. It is doubtful if even the legislator who first studied the subject and was the prime mover in getting Congress to take off the tax foresaw the great material benefits that would result.

It is not an exaggeration to say that no recent legislation has more widely affected the economic welfare of the Nation. By abolishing the duty on this perfect fuel Congress placed within the reach of all citizens a substitute for expensive heating and lighting commodities that will go far toward ending the monopolies created by the Coal Trust and the Standard Oil concerns.

Osol, or denatured alcohol, is alcohol that has been made undrinkable by a special process. It is non-explosive. It possesses sterling virtues besides its cheapness. Chief among these is its cleanliness. A heater fed by denatured alcohol will warm a large room or several connecting rooms at a total cost of a trifle more than a cent an hour. The heat radiated from this heater is very agreeable, totally devoid of that quality usually styled "dryness" so often complained of in hot air furnaces and steam apparatus. Another great advantage is that this heater is as easy to run as an ordinary lamp. A child can tend it. A small reservoir at the base of the heater is filled with the osol, the wicks are lighted and that is all there is of it.

How the housewife will rejoice in her osol heater, in her osol cooking range, in her osol sad-irons! No black, messy coal to be carried from the cellar. No odoriferous kerosene to be smeared about her clothes and furniture. No exorbitant gas bills to be paid each month. It is, indeed, a great step in advance in the comfort and well-being of our Nation—this introduction of denatured alcohol into the economies of our daily life.

In the cooking range the cleanliness of osol and its convenience are peculiarly gratifying; but no less so than in the sad-irons on ironing day. The osol is burned inside the irons, and there is no frequent changing of irons because they grow cold. An osol-fed iron is always ready for duty. The time of the ironer is saved; she has no worry over her irons.

The osol heaters and ranges have been found to be of peculiar value to hospitals and the sick room. No noise attends the care of them, and no gases or other unpleasant odors emanate from them, while their heat-glow is more comforting than from other fuels.

The light shed by an osol-fed lamp is soft, brilliant and white, and burns with a flame of great steadiness. It is like sunlight. Indeed, it possesses the properties of sunlight. It is as good for the eyes as sunlight, too. If you work or read by an osol-fed lamp your eyes will last longer and stay young longer than with any other kind of light.

For the last twenty years, while the United States Government was keeping a prohibitive duty on denatured alcohol, people in Europe and other countries had been enjoying its benefits. In Germany, the land of good housekeeping, the housekeeper would deem herself very ill-used were she forced to do without denatured alcohol in the conduct of her home. She prefers the brilliant, incandescent light of denatured alcohol to the really high-grade gas that the German city authorities insist upon.

Now, for the first time, osol has been put on the general market in the United States. It can be had at any grocer's or hardware dealer's. As soon as the public learns of osol there is certain to be a great rush to get it. As yet the public really knows little of it. The heating and lighting trusts have taken care that as little information as possible shall be circulated concerning it. It was only when newspaper editors awoke to a realizing sense that a great, new fuel was at hand to the people and began printing articles lauding its cheapness, cleanliness, safety, abundance and perfection that its merits have become known at all.

Just as electricity is supplanting steam on our railroads, so is denatured alcohol, apparently, destined to supplant coal, gas and kerosene oil as fuel for heating and lighting.

Denatured alcohol has another virtue besides those of heating and lighting. It is a splendid cleanser. For cleaning household utensils, windows or clothing, for removing all kinds of grease, paints, etc., etc., it is invaluable. It is the basis of most of the patent cleaning compounds on the market.

Osol, or denatured alcohol, is now on sale practically everywhere in the United States in any desired quantity.

Every dealer in osol carries a complete line of heating and lighting utilities, such as heaters, stoves, ranges, lamps, sad-irons, etc., etc. These are supplied by the Alcohol Utilities Company, No. 156 West Twenty-third Street, New York, who will gladly furnish, gratis, any information regarding denatured alcohol and its uses, or send circulars and catalogues giving in detail the articles manufactured for utilizing this grand new fuel.

## PATENTS, TRADE-MARKS, LABELS, PRINTS AND COPYRIGHTS.

By Edward S. Beach, Attorney and Counsellor at Law, 60 Wall Street, New York.  
Specialist in Patent, Trade-Mark and Corporation Cases.

For THE WORLD ALMANAC AND ENCYCLOPEDIA.

Mr. Justice Bradley, of the United States Supreme Court, said: "The design of the patent laws is to reward those who make some substantial discovery or invention which adds to our knowledge and makes a step in advance in the useful arts. Such inventors are worthy of all favor. It is never the object of those laws to grant a monopoly for every trifling device, every shadow of a shade of an idea which would naturally and spontaneously occur to any skilled mechanic or operator in the ordinary progress of manufactures."

The greatest "vice of the patent laws," frequently complained of, is not in the laws themselves, but in neglect of inventors to secure sound professional advice in the preparation and prosecution of their patent applications.

Patents are contracts between (1) the Government, (2) the patentee, and (3) the public; and patent specifications are among the most difficult contracts that trained lawyers are called on to prepare.

The real value of a patent lies in its force as a contract capable of being enforced by the courts, and the claims of a patent are its vitals. Everything, however well illustrated and described, but which is not claimed in a patent, is abandoned to the public—except when properly reserved for the subject-matter of another patent; and to draw legally proper patent claims demands the hardest labor of experienced patent lawyers. A patent without at least one sufficient claim for the invention is like a house with a foundation of sand.

Inventors and patent investors should consider the following:

1. Don't apply for a patent on an invention which does not fill or is not likely to fill some real want, or for an invention for which no actual market exists or can be probably created.

2. Don't invest (as a general rule) in a patent unless its claims cover the actual invention; nor unless the invention can be made and sold at a profit without infringing other patents; nor unless the claims of the patent are broad enough to cover the invention and also substantial imitations of it.

3. Don't make too many claims. They are a sign of weakness, and inducements to litigation. The courts do not favor such patents. One sufficient claim is stronger than forty uncertain claims.

4. Don't take out foreign patents unless sure that they can be worked or disposed of when obtained. In deciding this question, consult consular reports, exporters and other authorities.

5. Don't make doubtful claims in foreign patents. In some foreign countries invalidity of one claim invalidates the patent.

6. Don't think that patents will run alone. However important the invention, adequate capital and sound business judgment and energy are essential.

7. Don't fail to mark patented inventions with the word "Patented," and also with the date of the patent.

8. Don't keep inventions secret. Disclose them to trustworthy persons, who can be called as witnesses in case an "interference" is declared in the Patent Office between your application for your invention and the applications of rival inventors.

Remember that the Patent Office has nothing to do with questions of infringement, but deals exclusively with Patentability and Interferences. The Federal courts have exclusive jurisdiction of Infringement—i. e., the unauthorized manufacture, use or sale of a patented invention.

Remember that (1) patents, (2) trade-marks, (3) prints and labels for articles of manufacture, and (4) copyrights, are distinct things.

Patents are granted for 17 years, for machines, articles of manufacture, compositions of matter and processes.

Design patents are granted for 3½ or 7 or 14 years, for ornamental designs for articles of manufacture.

Prints and labels for articles of manufacture are registrable in the Patent Office, under the Copyright Law.

Copyrights are obtainable from the Copyright Office in the Library of Congress, and relate only to literary or artistic subject-matter.

Trade-marks consist of arbitrary, non-descriptive, non-geographical words (or symbols), and, unlike patents, are not based on invention.

Registration of a trade-mark is not essential to its protection. Trade-mark rights are secured by mere adoption and actual use of lawful trade-marks on articles of merchandise, and are lost by non-use. Trade-marks are registrable in most of the States of the United States, and also in the United States Patent Office when used in interstate or foreign commerce.

Trade-marks should never be adopted without careful consideration of their substantial legality and of the question of their essential novelty on the classes of goods to which they are appropriated. Registration of trade-marks in the Patent Office is frequently of doubtful advisability, often leading to otherwise avoidable litigation.

### U. S. Volunteer Life-Saving Corps.

(Incorporated and Organized in most of the States.)

*Officers*—James R. Howe, President, Ernest H. Luebbens, Jr., Secretary; K. F. Mehrtens, Assistant Secretary; Wm. P. Jackson, Treasurer; George A. Thormann, General Superintendent, 63-65 Park Row, New York.

The United States Volunteer Life Saving Corps has 2,000 patrolled stations and 22,000 enrolled members, all expert swimmers, yachtsmen and boatmen, with about 6,000 boats, from dories to expensive sail, steam, naphtha and gasoline launches. It has twenty life boats of its own in Greater New York, three in New York State, one in Connecticut, one thirty foot launch, two row boats and two canoes in Rhode Island, four dories in Massachusetts.

The corps is well organized in New York State, Massachusetts, Connecticut, New Jersey, Maryland, District of Columbia and Pennsylvania, with minor organizations throughout the other States as far west as California. It has saved 7,002 lives, has been giving free instructions in swimming in both male and female departments of all the Public Free Baths of Greater New York, and has built five life-saving stations throughout the Greater City.

The corps furnishes its various crews, free of charge, according to the funds available for the various districts and departments, ring life preservers, metallic life preservers, ice balls, medicine chests, flags, signs, charts and boats, and builds life-saving stations at the most dangerous points. It is supported wholly by voluntary contributions with the exception of the Departments of Greater New York, Youkers and Rhode Island, which are aided by appropriations from the cities and States, respectively.

The Department of Greater New York is particularly well organized, and is divided into sixteen commodores' and forty-eight vice-commodores' districts, containing 640 patrolled stations, with 7,000 members and 1,200 boats devoted to its life-saving work.

## National Cemeteries.

### Soldiers' Homes.

#### NATIONAL HOME FOR DISABLED VOLUNTEER SOLDIERS.

*President of the Board of Managers*... Maj. James W. Wadsworth, 346 Broadway, New York City, N. Y.  
*Secretary*..... Col. W. P. Brownlow, Jonesboro, Tenn.

There are branches of the National Home at Dayton, O.; Milwaukee, Wis.; Togus, Me.; Hampton, Va.; Leavenworth, Kan.; Santa Monica, Cal.; Marion, Ind.; Danville, Ill.; Johnson City, Tenn., and Hot Springs, S. Dak. The aggregate number of members cared for is about 30,000.

#### REQUIREMENTS FOR ADMISSION.

1. An honorable discharge from the United States service during a war in which it was engaged.  
 2. Disability which prevents the applicant from earning his living by labor.  
 3. Applicants for admission will be required to stipulate and agree to abide by all the rules and regulations made by the Board of Managers, or by its order; to perform all duties required of them, and to obey all the lawful orders of the officers of the Home. Attention is called to the fact that by the law establishing the Home the members are made subject to the Rules and Articles of War, and will be governed thereby in the same manner as if they were in the Army of the United States.

4. A soldier or sailor must forward with his application for admission his Discharge Paper, and when he is a pensioner, his Pension Certificate, and if he has been a member of a State Home, he must be honorably discharged from that Home six months, before his application will be considered; which papers will be retained at the branch to which the applicant is admitted, to be kept there for him, and returned to him when he is discharged. This rule is adopted to prevent the loss of such papers and certificates, and to hinder fraudulent practices; and no application will be considered unless these papers are sent with it. If the original discharge does not exist, a copy of discharge, certified by the War or Navy Department, or by the Adjutant-General of the State, must accompany the application.

There are State Homes for disabled volunteer soldiers provided by the States of California, Colorado, Connecticut, Idaho, Illinois, Indiana, Iowa, Kansas, Massachusetts, Michigan, Minnesota, Missouri, Montana, Nebraska, New Hampshire, New Jersey, New York, North Dakota, Ohio, Oregon, Pennsylvania, Rhode Island, South Dakota, Vermont, Washington, Wisconsin, and Wyoming.

#### UNITED STATES HOME FOR REGULAR ARMY SOLDIERS.

The United States Soldiers' Home in the District of Columbia receives and maintains discharged soldiers of the *regular* army. All soldiers who have served twenty years as enlisted men in the army (including volunteer service, if any), and all soldiers of less than twenty years' service who have incurred such disability, by wounds, disease, or injuries *in the line of duty while in the regular army*, as unfits them for further service, are entitled to the benefits of the Home.

A pensioner who enters the Home may assign his pension, or any part of it, to his child, wife, or parent, by filing written notice with the agent who pays him. If not so assigned, it is drawn by the treasurer of the Home and held in trust for the pensioner, to whom it is paid in such sums as the commissioners deem proper while he is an inmate of the Home, the balance being paid in full when he takes his discharge and leaves the Home.

Inmates are subject to the Rules and Articles of War, the same as soldiers in the army. They are comfortably lodged, fed, and clothed, and receive medical attendance and medicine, all without cost to them. There are 1,250 men now receiving the benefits of the Home.

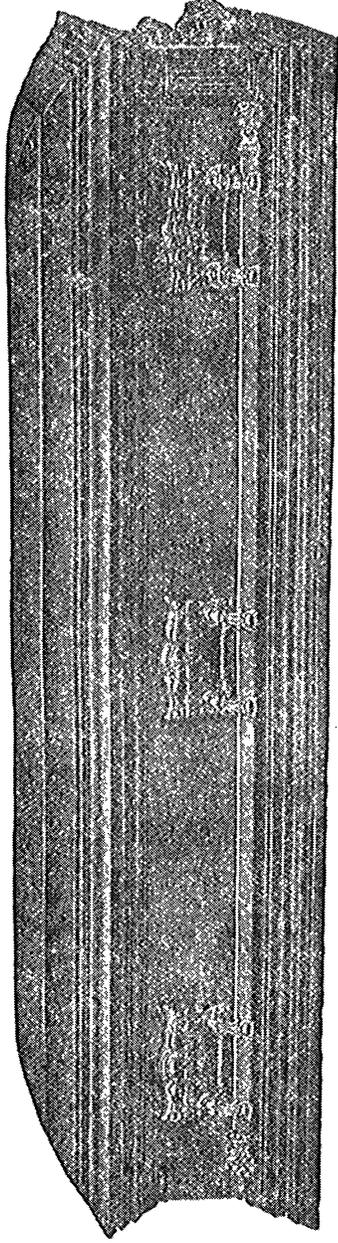

Applications for admission to the Home may be addressed to the "Board of Commissioners, Soldiers' Home, War Department, Washington City, D. C.," and must give date of enlistment and date of discharge, with letter of company and number of regiment for each and every term of service, and rate of pension, if any, and must be accompanied by a medical certificate showing nature and degree of disability if any exists.

## Are You a Smoker of Imported Havana Cigars?

We say "Imported Havana" because our proposition appeals to the man with a preference for tropical growth of tobacco manufactured into cigars before it leaves the tropics.

Our Puritanos Chicos are made of the finest Puerto Rican grown leaf, made by hand in our own factory at Caguas, Puerto Rico, and is so thoroughly Havana in its flavor that we will send you a box (25 at \$1.88) and agree to the return of them, or as many as are left, after you have thoroughly sampled them, in case they are not all you expect in a cigar sold under this guarantee.

Taste is the real test of a cigar, and it is taste only by which every smoker determines his choice. We do not sell our cigars as Havanas coming from the Island of Cuba. They need no deception. It is only necessary for you to understand that the delicious y flavored tobacco of the Cayey and Caguas districts of Puerto Rico has, until Cuba became independent, always been bought up by Cuban manufacturers and taken to the City of Havana where it was manufactured and afterward sold as the choicest Habana Cigar.

We import our Puerto Rican cigars and have them laid down in sealed boxes right at the Puerto Rican steamer docks, fresh every week, without one cent of import duty, and thus we sell tropical made cigars at prices that are mighty nearly as low as you pay for rank domestic tobacco.

I want to repeat that I guarantee these cigars, and will immediately refund the purchase price to anyone who isn't well pleased with them.

The cigar offered here is but one of 16 shown in our "Miltonesa" booklet sent to anyone who wants fine imported cigars at 4c to 18c each.

Send today for a box of 25 Puritanos Chicos—our most suitable cigar for a trial order. If you don't like this cigar, remember that we pay the express both ways, and refund your money. It is im-

portant to state whether you prefer a LIGHT, ME- DIUM or DARK cigar. Puritanos Chicos 100 - - - \$7.50 Box of 25 - 1.88

## THE ART PRESERVATIVE

IN none of the arts is the advance of the beautiful more pronounced than in that of the art preservative of arts. And it is by a return to the past, idealizing the typography of the Fifteenth Century, that the highest form of the beautiful has been attained. Within ten years the greatest changes for the better have been made. William Morris, of the noted Kelmscott Press, is quoted as saying in 1890 that no good book printing has been done since the middle of the Sixteenth Century, and that the degradation of the art had been largely due to mean types. He urged the use of better types, a tolerance of quaintness, and the revival of mediæval methods.

The adverse criticism of 1890 does not hold good now. A revolution has taken place from the over-ornate to the attractive and restful in typography. America has not been behind in this regard. The Jenson type is, perhaps, the best-known illustration. Between Nicholas Jenson and the American Type Founders' Company stretch nearly 450 years. It was in 1458 that Jenson, an engraver of the Paris mint, was sent to Mainz by Charles VII., King of France, to learn the new art of printing. He studied for three years and returned to Paris. In 1471 Jenson printed four books in Venice. He remained in that romantic city to the end of his life, in 1481. It is said that he was not the first printer to make Roman types, but that he made them better than did his rivals.

In honor of this old typemaker the Jenson type of to-day is named. Like the French pioneer of the craft, the American type foundry excel in their time in making the best faced type. On reflection, however, it seems strange that this handsome Roman letter, used in Venice in the Fifteenth Century, reached in the highest degree the necessary qualities of legibility and purity of line, and that the Twentieth Century can do no better than borrow its beauties for to-day's readers.

From the inception of printing from movable types, the masters who have handed down the honorable calling have taken pride in their work, like all true artists. Pierre-Simon Fournier, in his *Manual Typographique*, wrote:

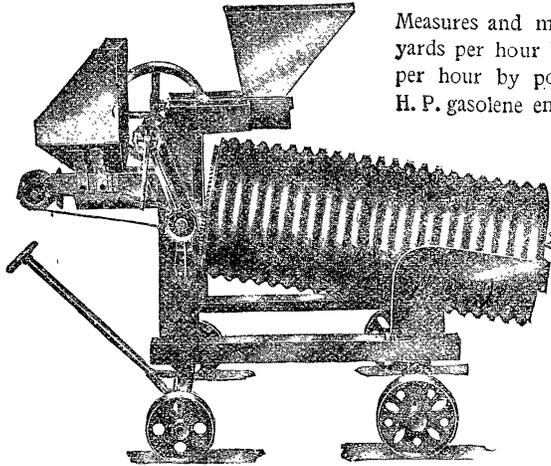

"Type-founding is not like other arts, in which imperfect workmanship may find a use proportionate to its relative value. Printing should tolerate nothing that is bad, nor even that which is mediocre, since it costs as much to found and print bad types as it does to found and print perfect ones."

It is safe to say that the time will never come when the handicraft of the type-founder will be a lost art. The demand for the artistic in type, as well as in the other finer fancies of the age, is growing, and is being met by "the founders," by which appellation the printers of the entire country designate the American Type Founders' Company, embracing the best-known and oldest-established concerns of a dozen cities.

This Company is the originator of all the leading type designs, and has unequalled facilities for supplying everything required in printing offices. It has lately issued very attractive specimen books, which cover the widest range in type faces in both plain and original designs. Among the new faces are the Cloister Black, Tabard, and the extensive Cheltenham family.

Additional specimen sheets are constantly being issued from the office, corner of Rose and Duane Streets, New York City, showing the new faces as soon as they are brought out for the public verdict.

## YOUMAN'S HOUSEHOLD GUIDE

By A. E. YOUMAN, M.D.

Containing Twenty Thousand Recipes in Every Department of Human Effort. It Will Save \$100 a Year to All Who Own This Book.

The following description of this book may have an appearance of exaggeration, yet, when compared with the book itself, the impartial reader will allow that the description only faintly echoes the vast fund of information contained in it.

No trade, profession, or occupation but what is represented therein. The housewife will find aids and suggestions therein innumerable. The Carpenter, the Builder, the Blacksmith, will find material aid each in their respective departments. The young lady will find innumerable aids to pass her time not only pleasantly, but profitably. The Farmer and Stock-raiser will there reap such valuable hints as cannot be found outside a small agricultural library. The Trapper can find in no other book or books the secrets contained in Youman's. The Sick can turn therein to the particular disease with which they are troubled, and learn the latest remedies, with methods for home treatment. But it is impossible to enumerate every particular branch of every employment that Youman's does not advance new and valuable information thereon. The following gives briefly the different trades, etc., etc., valuable information for which is found in Youman's Household Guide.

Book-keepers,	Glass Workers,	Gilders,	Varnishers,	Electrotypers,
Stock-raisers,	Hair Dressers,	Painters,	Cooks,	Fish Dealers,
Gardeners,	Hatters,	Shoemakers,	Engravers,	Gunsmiths,
Florists,	Ink Makers,	Brewers,	Furriers,	Lithographers,
Liquor Dealers,	Lumber Dealers,	Builders,	Carvers,	Milliners,
Druggists,	Miners,	Dairymen,	Jewellers,	Dentists,
Photographers,	Opticians,	Glaziers,	Dyers,	Plasterers,

## OLDS ENGINES "BEST BY EVERY TEST."

### Do You Want an Engine?

We have one you can afford to buy. We have been building nothing but engines for 25 years. We guarantee the Olds Engines will run properly. The price is right. The engine is reliable and simple. We treat you right. There is an agent near by to see everything is right and kept so.

We have a liberal proposition to make to you, besides furnishing you the best engine made. Let us tell you about it, because it will surely interest you.

We can furnish you our Type A engine, set up on skids if desired, 3 to 8 h. p. ready to run when you get it—does not have to be set up—no piping to connect, no foundation to build—simply fill with gasoline (or distillate) throw on the switch, turn the wheel and it goes. Easy to start in Winter or Summer. The cheapest of all engines for farm and stationary power. Has removable water jacket, all latest improvements, and has been adopted by the United States Government.

Send for our catalog of 3 to 50 h. p. engines, and be sure you take advantage of our proposition and save money.

It is the one phonograph that gives you all the sound vibrations. It has not only two horns, but two vibrating diaphragms in its sound box. Other phonographs have one diaphragm and one horn. The Duplex gets all the volume of music; other phonographs get the half. Not only do you get more volume, but you get a better tone—clearer, sweeter, more like the original. Our

will explain fully the superiority of The Duplex. Don't allow any one to persuade you to buy any other make without first sending for our catalogue.

## Save all the Dealers' 70% Profits

The Duplex is not sold by dealers or in stores. We are Actual Manufacturers, not jobbers, and sell only direct from our factory to the user, eliminating all middlemen's profits. That is why we are able to manufacture and deliver the best phonograph made for less than one-third what dealers ask for other makes not so good.

**DUPLEX PHONOGRAPH CO., 214 Patterson St., Kalamazoo, Mich.**

## All the Latest Improvements

The Duplex is equipped with a mechanical feed that relieves the record of all the destructive work of propelling the reproducer across its surface. The needle point is held in continuous contact with the inner (which is the more accurate) wall of the sound wave groove, thus reproducing more perfectly whatever music was put into the record when it was made.

The Duplex has a device by which the weight of the reproducer upon the record may be regulated to suit the needs of the occasion, thus greatly preserving the life and durability of the records. These are exclusive features of the Duplex and can not be had upon any other make of phonograph. Plays all sizes and makes of disc records.

# A Mile a Month

THAT'S how far the average business man pushes a pen point—a mile a month. It makes a whole lot of difference if you use a speedy pen that never hitches or stumbles, never catches or splutters—a pen that will travel faster than you can steer it. Aluminoid is a firm, smooth metal that never rusts or corrodes, and it makes a pen that glides over the paper as if it had wings. Aluminoid No. 15 we call the "Cannon Ball," because it is so fast. It writes on anything, and lasts until the metal actually wears out.

Until you use one, it looks a lot like an ordinary pen, but prominent business men all over the country take the trouble to write us that they think it is unlike any other pen in the world, and thank us for calling it to their attention.

This pen will save you dollars worth of annoyance every month, and give you ease and comfort and satisfaction. Send your office boy to the stationer's for a box of "Cannon Balls." We will send samples free to any business man.

A. L. SALOMON & CO., 345 Broadway, New York City.

**FREE  
TRIAL OF  
TREAT-  
MENT**

**RUPTURE  
CURED**

We want every ruptured sufferer to write us for a FREE TRIAL of Treatment, and illustrated book, we want to "SHOW YOU" that the PLASTER-PADS will CURE Rupture QUICKLY and PERMANENTLY. Experience has taught every ruptured person that the truss will not cure, and every treatment which has here-to-fore been offered to ruptured people, has been nothing more or less than a TRUSS IN DISGUISE.

Dr. W. P. Markland, Cuba, Ill., writes:—"Your PLASTER-PADS are the best all round treatment for rupture I have ever experimented with, and I can't think how many I have tried."

Mrs. J. C. Stover, Glen Rock, Pa.,—was cured in thirty days by the PLASTER-PADS after trying many other treatments.

Mr. Fred Stebbins, Carthage, Mo., writes:—"The PLASTER-PADS are by far the "greatest thing ever invented for rupture."

RUPTURE CURED BY STUART'S PLASTER PADS means a PERMANENT CURE, ABSOLUTELY GUARANTEED and you do away with the painful irritating unsatisfactory truss altogether. No BUCKLES—no STRAPS—no SPRINGS. Adheres closely to body, holds the rupture IN PLACE and cures the most obstinate cases. Easily applied—soft as velvet—will not irritate or blister most delicate skin. Only SHORT TIME required for PERMANENT CURE. Has cured thousands, on our GUARANTEE. If YOU wish to be cured, WRITE AT ONCE to

STUART PLASTER-PAD CO. DEPT 99, St. LOUIS, Mo.

# MIXED PAINTS

At Wholesale Prices and Save Dealer's Profits

FROM THE OLDEST MIXED PAINT HOUSE IN AMERICA

Manufacturers of INGERSOLL LIQUID PAINTS, proved by 65 years' use to be the most durable and color lasting. Indorsed by the Grange.

## SAVE ONE-HALF YOUR PAINT BILLS

When you buy paints from the store or supply house, only half your money goes to the man who made the paint—the other half is divided between the wholesale dealer, travelling salesman and local store-keeper, to cover their profits and expenses. *Quite a lot of people for you to help support.*

The store is nearer your house, but I am nearer to you. I am a manufacturer and deal direct with you, not through a whole chain of middlemen, each going into your pocket for his share of profit.

You save all dealer's profits by buying "direct from Ingersoll," and receive full value for your money in the Best Paint.

## INGERSOLL PAINT BOOK FREE

## ELECTRO-CHEMICAL RING

Trade-Mark, E-C. Copyright, 1904, by W. G. Brownson.

The following diseases are caused by acid in the blood, and are cured by this ring, which takes from twenty-four hours to two weeks, according to disease and circumstances. The ring and the acid create an electro-chemical action, removing the acid and curing the disease. Rheumatism—Articular, Inflammatory, Sciatic, Muscular, Gout, Lumbago, Neuralgia, Heart, Fever. Rheumatic Paralysis—Typewriters, Pen, Operators, or wherever located. Asthma, Goitre, Blood Cancer, Varicose Veins, Varicocele, St. Vitus's Dance, Nervous Prostration, Acidity of Stomach causing Constipation, Bright's Disease, Sugar Diabetes, Diabetes, Dropsy, Prostatitis, Congestion of Kidneys, Catarrh of Bladder, Gravel, Gall-stone, Stone in Bladder, Calculi, Salt-rheum, Psoriasis, Painful and Excessive Monthly Periods, Epilepsy, Chronic Dysentery, Bloody Flux, Nosebleed, and all Internal Hemorrhages. Price, \$2.00. Gold-covered, \$4.00. By Mail or by Express, Collect on Delivery. Send paper size of finger. Agents wanted at places not taken. Send for additional information. The \$2.00 ring is sold on a three weeks' guarantee; ring can be returned and money will be refunded if not satisfactory. Not for sale by jewellers or druggists. Any person who uses our name or copies from our advertising is fraudulently trying to do business on the reputation of this ring.

This ring is not for sale by wholesale houses or any firm advertising cheap rings and can only be obtained from us and our authorized agents.

PEOPLE WHO ARE SUBJECT TO RHEUMATIC, KIDNEY, AND ALL ACID DISEASES, HAVE EXPERIMENTED FOR HUNDREDS OF YEARS, AND SPENT MILLIONS OF DOLLARS, TAKING AND APPLYING REMEDIES. The time will certainly come when intelligent people will not submit to be experimented with to see if a medicine can be made to cure acid diseases.

Any reputable physician will advise you that a permanent cure in that manner is impossible, as the acid is liable to accumulate again at any time after you quit using the best remedies known to the medical profession. That acid in the blood caused a limited number of diseases has always been admitted, but the knowledge of the fact that an excess of acid is the cause of so many diseases of hitherto unknown pathology has been a revelation to the medical profession.

Electricity, if applied continuously, and in the proper proportion, will remove acid from the blood and this is admitted by all who are good authority in acid diseases. By the use of the Electro-Chemical Ring the best results are obtained by an electro-chemical action, as it acts directly on the acid, reducing the intensity and quantity, until there is no surplus, when the ring will quit working, and will work only when it is necessary to keep the acid reduced.

**3 FEEDS FOR ONE CENT**

My stallions, Dan Patch 1:55, Cresceus 2:02 1/4, Directum 2:05 1/4, Arion 2:07 1/4, Roy Wilkes 2:06 1/4, Buttonwood 2:17 and my one hundred high-class brood mares eat "International Stock Food" every day. Dan Patch has eaten "International Stock Food" every day for over four years and during this time has broken Twelve World Records and his physical condition has been marvelous. It will pay you to use it for your Stallions, Brood Mares, Colts, Race Horses, Show Horses, Carriage or Coach Horses and Work Horses because it gives more Nerve Force, Endurance and Strength. "International Stock Food" is prepared from finely powdered medicinal Roots, Herbs, Seeds and Barks and is fed in table-spoonful amounts as an addition to the regular grain feed. It is equally good and very profitable to use for Horses, Colts, Fattening Cattle, Cows, Calves, Hogs, Pigs, Sheep or Lambs, because it Purifies the Blood, Tones Up and Permanently Strengthens the Entire System, Keeps them Healthy and Greatly Aids Digestion and Assimilation so that each animal obtains more nutrition from all grain eaten. In this way it saves grain and will make you a large extra profit. We have thousands of reliable testimonials on file in our office, and every pound of "International Stock Food" is sold by over 125,000 dealers, on a "Spot Cash Guarantee" to refund your money if it ever fails. Constantly used by over two million stockmen throughout the world. If you desire any further information I will be pleased to have you write me.

50,000 IN SATISFACTORY USE

OUR OFFER—Tear off the Coupon at the bottom of this page, fill it in, inclose \$3.50, mail it to us, and we will ship to you, express paid, one U. S. Automatic Pencil Sharpener and two extra blades. You will screw this Machine down in your office, use it for ten days or more, and if it makes good all our claims for it and is satisfactory, keep it. If, however, it is not what you expected, pack it up and ship it back to us, express collect, and we will refund your money in full.

DOESN'T THIS PROVE OUR ABSOLUTE CONFIDENCE IN THE MACHINE?

OUR CLAIMS FOR THE U.S. AUTOMATIC PENCIL SHARPENER

- 1st—It saves \$70 a year wherever three pencil users work.
2nd—It cuts off just enough and no more. After a Pencil is sharpened you can turn the handle of the machine all day and it won't cut any more from the Pencil.
3rd—It's absolutely simple, and has no parts which can get out of order.
4th—It don't grind, it CUTS.
5th—It makes a working "point," and not a wasteful "needle point."
6th—Can't Break the LEAD.

For Proof of These Claims, Accept Our REFUND TRIAL OFFER

Send for our Booklet "A SAVING POINTER." It tells you how to stop a heretofore intangible Office Expense Leak.

## HOW TO RUN AN AUTO.

“A GOOD INVESTMENT.”

This work is now the accepted standard, on the practical care and management of motor cars—explaining the principles of construction and operation in a clear and helpful way, and fully illustrated with many diagrams and drawings.

The presentation of subjects has been determined by consideration of the needs of the man behind the wheel. It is clear and concise in its treatment, and comprehensible to the most inexperienced automobilist at the same time; it is so thorough that the expert will learn much from its pages.

This good book will be sent to any address in the world, postpaid, upon receipt of two dollars, or if desired, will be sent on approval to be paid for after examination.

# 200 EGGS A YEAR PER HEN

HOW TO GET THEM.

The sixth edition of the book "200 Eggs a Year Per Hen" is now ready. Revised, enlarged, and in part rewritten, 96 pages. Contains among other things the method of feeding by which Mr. S. D. Fox, of Wolfboro, N. H., won the prize of \$100 in gold offered by the manufacturers of a well-known condition powder for the best egg record during the Winter months. Simple as a, b, c—and yet we guarantee it to start hens to laying earlier, and to induce them to lay more eggs than any other method under the sun. The book also contains recipe for egg food and tonic used by Mr. Fox, which brought him in one Winter day 68 eggs from 72 hens, and for five days in succession from the same flock 64 eggs a day. Mr. E. F. Chamberlain, of Wolfboro, N. H., says: "By following the methods outlined in your book, I obtained 1,496 eggs from 91 R. I. Reds in the month of January, 1902." From 14 pullets picked at random out of a farmer's flock the author got 2,999 eggs in one year—an average of over 214 eggs apiece. It has been my ambition in writing "200 Eggs a Year Per Hen" to make it the standard book on egg production and profits in poultry. Tells all there is to know, and tells it in a plain, common-sense way. Price, 50 cents, or with a year's subscription, 75c.; or given as a premium for two yearly subscriptions to the American Poultry Advocate at 50c. each.

Our Paper is handsomely illustrated 44 to 80 pages, 50 cents per year. 3 months' trial, 10 cents. SAMPLE FREE.

# Elmcroft

**I**T is absolutely essential, in the selection of a site for a Sanatorium, that the surrounding landscape shall impart a feeling of rest, ease and peace to the patrons. In this particular, none of this class of institutions throughout the United States is more favored than "ELMCROFT," which was established in 1890 for the care and treatment of persons suffering from nervous and mental

ELMCROFT.

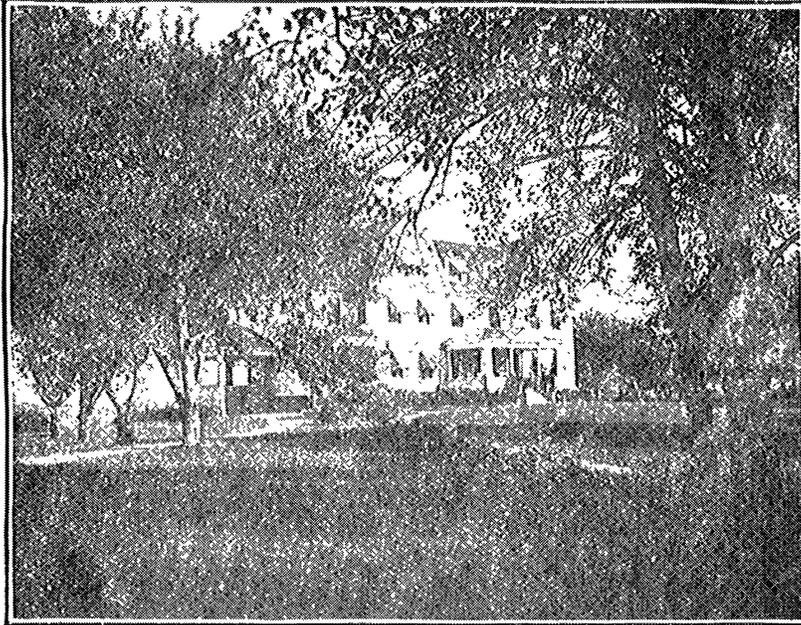

diseases, and which has, under the management of Dr. Edwin Smith Vail, enjoyed seventeen years of professional prosperity. Dr. Vail is peculiarly fitted to conduct an efficient institution for people with mental disabilities.

The Sanatorium takes its name from the typical old New England mansion "ELMCROFT," which forms part of the institution and is the residence of Dr. Vail. It is of the usual quaint and restful construction with an emerald setting of beautiful foliage.

The Sanatorium building is a three-story structure and is thoroughly modern

in all of its details. No appliance that science can suggest for comfort or cure is missing. This building, which is adjacent to the old mansion home of the Doctor, is placed in an elm-studded lawn, on a wide elm-shaded street, in the beautiful old New England town of Enfield, Ct. The town is situated on the N. Y., N. H. & H. R. R., a direct route between New York and Boston, and between the cities of Hartford and Springfield. The electric railroad connecting these two cities passes the Sanatorium grounds. Fifty acres of shady lawns, orchards, meadow and woodland surround the buildings and make it an ideal resting place for nervous invalids who demand beauty of surroundings as well as quiet and retirement. The material care of the invalid has been thought of as well as the mental, for, attached to this model institution, there is a herd of Jersey cattle, kept constantly in a sanitary condition; a large poultry yard; a kitchen garden; fruit in abundance, and everything that would go to make up a perfectly appointed country home.

The Sanatorium buildings are attractive and of modern exterior design. They are heated by steam, lighted by electricity, have open fireplaces, and are finished in hard wood. The first story has a reception-hall, billiard-room, patients' parlor, dining-room, consultation-room, kitchen, etc., on the east and west sides of which are large verandas from which beautiful views can be had of the Con-

SANATORIUM.

necticut River and Valley. The second and third stories are devoted to patients' rooms. They are two sizes—12 x 14 and 15 x 16. All are light, airy and cheerful, with restful views of the surrounding country. There are large modern bathrooms at the end of each hall. These floors will accommodate fifteen patients, and this is the capacity of the institution.

Dr. Vail has practised for twenty-five years and enjoys the confidence and patronage of members of his profession because his institution is conducted along strictly ethical lines. He was for a time on the staff at Ward's Island, where he made a study in the psychopathic ward of that famous institution.

Dr. Vail has surrounded himself with a staff of agreeable and competent nurses and attendants, and the State Inspector of Sanatoriums declares that "Elmcroft" is the most pleasantly situated and one of the best conducted institutions in this country. Applications should be made to DR. EDWIN SMITH VAIL, Physician-in-Charge and Proprietor, P. O. address, Thompsonville, Ct.

☐ The Heating of the home involves three things---comfort, health, economy.

☐ The **KELSEY** fulfills the requirements for each. **NO OTHER DOES.**

☐ The great battery of **ZIG ZAG HEAT TUBES** forming the fire box of the **KELSEY** is the secret of its efficiency. These heat tubes take the heat direct from the live coals, they give more than double the heating surface of other heaters and warm much larger volumes of air, thus securing perfect ventilation as well as heating.

☐ **ZIG ZAG HEAT TUBES** force the warmed air to distant or exposed rooms warming them perfectly,---the only warm air heater that does.

## IDEAL SUBURBAN TOWNS ON LONG ISLAND

The well-known fact that during the last few years there has been a great increase in the permanent population of the towns and villages constituting the suburbs of the large business centres, is particularly true of the delightful suburban places along the Long Island Railroad.

Those residing in cities have of late years been greatly interested in the advantages of living in the country the year round, and business men who must needs be at their desks or stores daily, are locating their families where they may have all the benefits of the country and where they themselves may spend each night without making the journey to and from the city a tiresome feature of their daily life.

Probably the most essential thing in living in a suburban town is quick and satisfactory transportation facilities to the city, and in referring to Long Island it is sufficient to say that the frequent and well regulated service of the Long Island Railroad is all that can be asked for.

Long Island's topographical variations range themselves into three main classes, each served by a separate branch of the Long Island R.R. On the southern shore is a charming stretch of land overlooking the Atlantic Ocean and the Great South Bay, with fine beaches (the only extensive east and west beach on the Atlantic Coast), unexcelled for surf and still-water bathing; the central section is level, though in places rolling country, made up of farms and woodland; the northern reaches of the island are generally hilly, covered with a thick growth of trees.

The great diversity of scenery and natural characteristics make Long Island a most popular Summer and residential territory. Its nearness to New York City, the superiority of the railroad service, the excellence of its school system, the high quality of its society—pure water, refreshing breezes, cooled by the ocean in the Summer—churches of all denominations, clubs, libraries and well-stocked stores—all unite in producing conditions that are ideal for a home, which is proven by the fact that many handsome residences have long since been established there and are occupied the entire year by their owners.

No other suburban territory can make so strong an appeal to the seekers of a quiet, restful, healthful, home section as Long Island.

# GRAY HAIR

---

Chemistry has solved the problem of perpetual youth as far as the hair is concerned, and those with premature gray hair need no longer have any anxiety.

A large railroad company recently discharged 236 men, all of them over 40 years old. It was understood that gray hair and the appearance of age was the only reason for their dismissal. This places a premium on youth.

After much research we offer a preparation of our own manufacture, guaranteed free from silver, lead or other metallic elements with which you can stain the hair a permanent auburn or the various shades of brown or black.

Send a sample of your hair and we will match it exactly.

# VARICOSE VEINS

Trouble many people that suffer quietly because they have always understood that they could not get relief even, to say nothing about getting cured. To such people what encouragement and hope for better conditions such a statement as the following must bring:—

W. F. Young, P. D. F., 137 Monmouth St., Springfield, Mass.

Dear Sir:—

Kindly permit me to express my deep appreciation for the permanent cure recently affected by your wonderful ABSORBINE, JR., of a severe case of Varicose Veins, whose growth traces back 20 years, which all other medical treatment had failed to relieve.

For 20 years my left leg had been swollen above normal size, and last Winter I suffered unendurable pain and lameness that set in.

I consulted a physician and he advised me to take to my bed for two weeks and to forever afterward wear a rubber stocking; either of which would be disagreeable. I was loath to follow these instructions, as it would necessitate being absent from my duties as foreman of the National Biscuit Works, which with the responsibility attached made my services almost indispensable to my employers. To follow the doctor's orders would not only mean much expense, but I dreaded most the monotony of confinement.

I had read of the success of ABSORBINE, JR., and hence decided to give it a trial. I used a few bottles, with the tablets, and in less than three months the lameness and all the lumps which had been augmenting for years had disappeared and I was entirely cured.

My duties being of a nature that required me to keep on my feet all day, I was able to appreciate the value of ABSORBINE, JR., and I firmly believe others who experiment with it will indorse my testimonial. I heartily recommend it.

Yours Very Respectfully,

(Signed) Sept. 20, 1907.

LUKE KAVANAUGH,

227 New Bridge Street, West Springfield, Mass.

---

You can get the ABSORBINE, JR. of your Druggist at \$1.00 per Bottle, or it will be mailed to any address, all charges prepaid, upon receipt of price. Get the genuine and you will not be disappointed.

**T**HIS magnificent 10-mile ocean front resort, 24 miles from New York City, is the only ocean front property within commuting distance from New York City, where one can own an ideal home free from all detrimental encroachments.

LONG BEACH is now being developed at the initial cost of eight millions of dollars.

An army of mechanics and laborers are transforming this superb property from plans conceived after months of labor by the best engineers in the country.

Interesting literature containing views of the property, together with plans, which include the 5½-mile boardwalk, the grading and macadamizing of streets, the building of electric light and gas conduits and the erection of the million and one-half dollar hotel will be sent upon request.

Out-of-town purchasers have allowances made for railroad fare.

The conservative investor seeking for an opportunity to double and triple his money should investigate this property, and benefit by the experience of early Atlantic City buyers.

# The EDISON PHONOGRAPH

**N**OTHING can equal the satisfaction there is in offering to your guests a satisfactory form of entertainment, one that takes care of itself, which does not interfere with other forms of amusement, but rather helps them. Such an entertainer is the Edison Phonograph.

## *It can amuse the guests*

by rendering music, popular or classic, or it can aid them by furnishing dance music, marches and other things played by the best orchestras and brass bands. It costs less than the hiring of even a small orchestra for a single evening's entertainment.

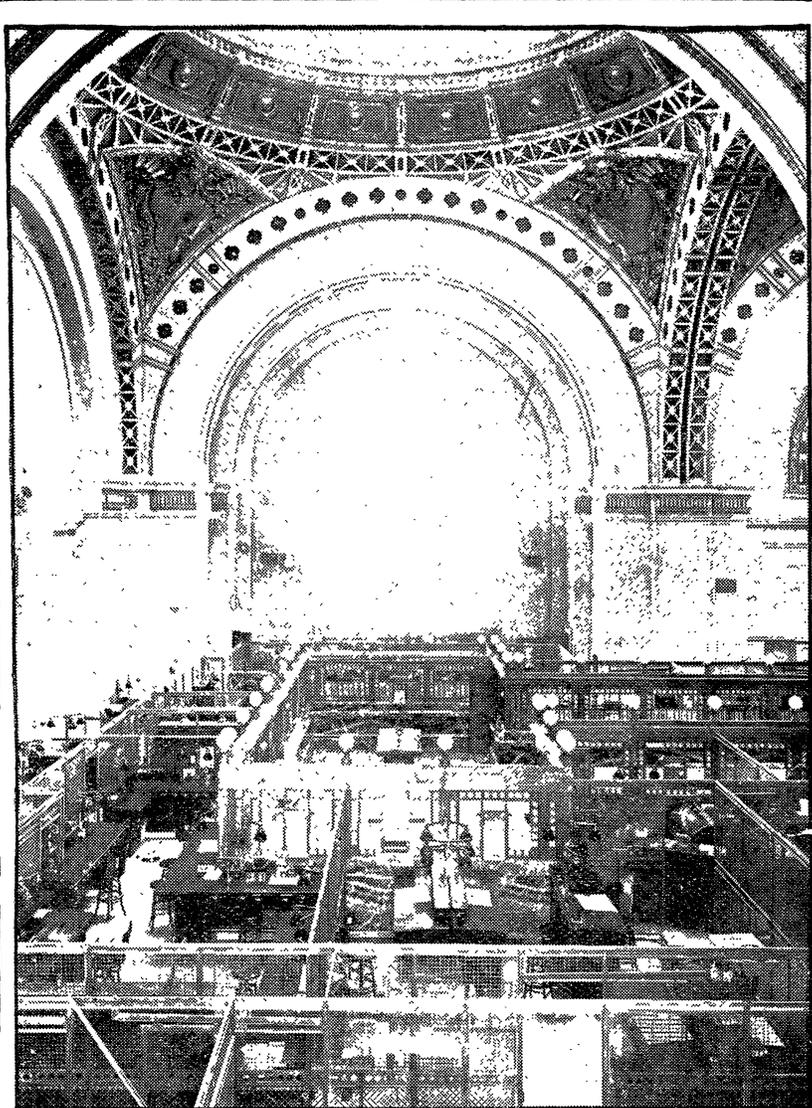

Don't be without an Edison Phonograph if only for the sake of your friends. Hear the new model with the big horn at the nearest Edison store, or write for a booklet describing it.

## Hammerless Sporting Rifles

Beauty of outline is not everything. Yet this rifle has it—in so marked a degree that it catches the eye of every sportsman. But there is also a very practical reason why the experienced sportsman naturally turns to the Savage Sporting Repeater. The fact that it is **hammerless**; has a **safety device** that locks the mechanism and prevents accidental discharge; has an **automatic indicator** to tell when hammer is cocked; has a **magazine** holding six cartridges and an **indicator** to show how many unfired shells remain; has a **solid wall** of steel between the barrel and the operator in case of defective shells or primers. These are a few of the reasons. There are still others.

Ask your dealer. Also ask him about the Savage .22-caliber Hammerless Repeater. And besides, send today for our handsomely illustrated catalogue, free.

## Incubator Book

**The Best That Was Ever Written**

If you wish to buy an incubator wisely, read this book. It will tell you the facts that you need to know. It is written by a man who has spent 26 years in perfecting an ideal incubator. It tells of the mistakes that he made and that others are making—and how to avoid them. It tells you his experience with all sorts of incubators—the good points and the weaknesses of all. It tells you how he has perfected the Racine Incubator—in 26 years—until it includes all the good points that any man has discovered. The book is interesting—fascinating—and it is written by a man who knows most about incubators. You will know which incubator you want when you read it—and the book is free. Write today for it. **Remember, We Pay the Freight.** Address

## "DIVIDED" ROLL TOILET PAPER

### "HONEST COUNT"

(100 ROLL CASES)

This brand has 1,000 Sheets to each roll, or nearly five hundred feet of Tissue "divided" into sheets, held by a narrow "bond," which may be ruptured easily and without waste. The quality of paper always the very best.

NOTE—"Honest Count" means just that, while consumers, in buying Toilet Paper, think they are getting 1,000 Sheets, it is a fact that 90 per cent. of all that is sold contains less.

Every Roll is guaranteed, on its wrapper, in the following language:

"To any one who will forward to the manufacturer this wrapper, with an affidavit that this roll is not as represented in every particular, we will forward free of charge Ten Rolls."

Large consumers, and small ones also, need just such protection against fraud in the "fatherless" rolls, bearing "fancy" names merely, which are plentiful in the market.

## THE "JEROME" FIXTURE

IS THE RESULT OF MANY YEARS' EXPERIENCE OF THE REQUIREMENTS OF A "PERFECT" FIXTURE.

1. All parts are together when it leaves the factory and are so retained. None can be lost or mislaid.
2. No instruction necessary as to "how to put up" or work, its action being universal and automatic.
3. Tension to prevent paper from unwinding too freely is obtained in the only rational way—*i. e.*, by a slight spring acting against *end* of
- roll. This tension may be increased at will, and is so arranged that as the roll diminishes, the tension also diminishes.
4. Locked with the most perfect, yet simple automatic lock ever devised.
5. Durability—so constructed as to last for years—rendering it the cheapest fixture to be had.

## Do You Live in the Country? How is Your House Supplied with Water?

The success of your home as a comfortable and sanitary abode depends largely on your water supply.

Artificial heat is required only in winter—artificial light only at night. Water is required during all seasons—day and night.

## The Kewanee System of Water Supply

will enable you to have an abundant supply of water—available at any hour of the day or night—delivered to your bathroom, kitchen—laundry, barn, garden, lawn—anywhere—under the same strong pressure as an up-to-date city water works system.

The Kewanee System does away with the drudgery of carrying water in pails—a task which men shirk and women should never be obliged to do.

With the Kewanee System you use the water from your own well, cistern or other natural source of supply. The tank is placed out of sight in the cellar, or under ground.

No leaky attic tank or unsightly elevated tank to freeze or collapse.

The Kewanee System is easy to install, easy to operate and costs nothing for repairs. Over 8,000 Kewanee Systems are now furnishing water to country and city homes, clubs, hotels, schools, apartment buildings, public institutions and towns under an absolute guarantee of satisfaction.

Our engineers will solve your water supply problem, furnish plans and estimates free of charge. Write today for catalogue number 31 (64 pages illustrated) which explains everything.

### CONSTIPATION

John Kirschbaum, Waterbury, Conn., writes:  
 "Received your 'Cascade' about three weeks ago, and have been using it ever since, most every evening. I am 55 years old, and my case is one of 30 years' standing. Have been troubled with constipation and dyspepsia. The results are, have lost my bloated abdomen, so my clothes do not fit any more. Appetite fair. ### INTERNAL BATH By Means of TYRRELL'S "J. B. L. CASCADE."

Mrs. E. A. Wolcott, of Eatontown, N. J., writes:  
 "The 'Cascade' has done so much for us. My husband would have been in his grave but for that. He had every bad feeling that flesh is heir to. Doctors said, Weak Heart, Liver Trouble, Muscular Rheumatism, Indigestion, Bilious Colic and many other things. All have left him now. He has worked hard all the Summer, eats well, sleeps well, and looks 5 years younger. Gratefully."

**We have cured 50,000 sufferers and can cure you!**

Call on Dr. Tyrrell for Free Consultation, or write for Free Booklet, "The What, The Why, The Way." We prove that 90 per cent. of all ailments come from constipation, which can be cured without medicines of any kind. Don't suffer and die. Learn the startling, wonderful truth and enjoy life.

# THE AMERICAN "VINE-LAND."

An Interesting Story of the Vine and Wine in the Different States of the Union—The Growing Demand for Light Wines in This Country.

**L**ONG before Columbus made his first voyage, in 1492, the bold and venturesome Norsemen visited our Atlantic shores. They found the wild vines and grapes growing in such luxuriance and profusion that they named the country "Vine-land." What a long stretch from Old Vineland to New Vineland, with its hundreds of thousands of acres of cultivated vines!

The history of grape and wine growing in the United States is a long story of struggles and failures. It begins with the attempts of the Colonists to plant a few vines in Virginia in 1610, three years after the settlement of Jamestown. It continues down to the year 1857, when grape and wine growing was first made a commercial success by Hon. Nicholas Longworth at Cincinnati, Ohio. Thus, the American grape and wine industry is but fifty years old. As a matter of fact, its greatest progress has all taken place in the last twenty or twenty-five years.

The American "Vine-land" now comprises about 350,000 acres of vineyards. The State of California leads with a total of 230,000 acres planted to grapes. New York State is next with about 60,000 acres of vineyards. Ohio follows with about 10,000 acres. Michigan and Missouri each has about 6,000 or 8,000 acres of vines. In fact, grapes are grown and wines are made in more than one-half of the States in the Union. The capital invested in our vineyards, wine cellars and plants, machinery and warehouses, stocks of wines, etc., giving employment to thousands of farmers and workmen, is put at \$100,000,000.

With the immense production of grapes has come the large increase in the use and consumption of light wines in this country. For many years our people drank largely of foreign wines, but now they consume our good American wines. The importations of foreign wines are about the same as they were twenty years ago; that is to say, in 1907 some 5,000,000 gallons of wine were imported into the United States, which is just about the quantity of wine imported in 1887. On the other hand, the output of American wines in 1907 was about 50,000,000 gallons; so that about ten times as much wine is produced and consumed in this country as there is of foreign wines.

## THE SUPERIOR QUALITIES OF AMERICAN WINES.

There is every reason why our wines should be equal, if not superior, to any in the world. We have in the United States the choicest varieties of grapes, almost every kind of soil and climate, American capital and enterprise, and the most intelligent labor in the world. France, Italy, Spain and Germany have no monopoly of sunshine, soil or climate for grape culture, nor any secret in making good wines not known to our people here.

All the varieties of grapes producing wines in France, Italy, Spain and Germany are growing to-day in the vineyards of the United States. In addition, we have many native varieties of grapes, such as the Concord, Delaware and Catawba, which are not found in Europe. It is no wonder, then, that our wine makers can and do produce wines that rival the vintages of the Old World.

All of the well-known "types" of wines produced in Europe are obtained in this country. The vineyard districts of France, Italy, Spain and Germany now have their counterparts in the vineyard districts of Virginia, New Jersey, New York, Ohio, Missouri and California. Thus the French Clarets can be duplicated by the American Clarets; the Italian Chianti by the American Chianti. The dry white wines of western New York, of northern Ohio and of the California foothills resemble the German wines of the Rhine and Moselle. The Champagne

district of France finds its counterpart in the Lake Keuka region of New York, which has become the Champagne district of the United States. The Port wines from California and our Eastern States leave little to be desired in comparison with the wines from the Alto Duoro. The Sherries from southern California and the interior valleys of that State closely resemble the Spanish product. The result is that the superior qualities of our many American wines are becoming more and more appreciated, while, on account of their known purity, they are preferred to the imported.

#### THE HEALTHFULNESS OF PURE WINES.

The fruit of the vine is one of the most perfect products of the soil. Its excellence is equally conspicuous, whether we consider its delicious flavor or the numerous uses to which it may be applied, whether as a beverage or as a tonic. The juice of the grape contains albuminous matter to nourish the brain, muscles and nerves, sugar to warm the body, and organic salts for the bones and tendons.

Give a chemist a bottle of pure, dry wine and have him analyze it for its properties; he will report from 85 to 90 per cent. water, balance alcohol, fruit acids, and organic salts. The water in wine has been called "distilled sunshine," while the wine acids, such as tartonic, pectic, succinic and tannic, not only promote the flow of saliva and the gastric juices, but also aid in converting in sugar the starchy matters of food.

The fermented juice of the grape thus furnishes a blood-purifying and nourishing beverage, which enables man to enjoy good health and digestion. In the wine-drinking countries of Europe the people do not suffer, as we do, from indigestion, or dyspepsia, and other troubles due to overeating and overdrinking. The mild acids of the wine promote the normal action of the digestive organs, while the small amount of alcohol acts as a tonic to the whole system.

#### WINE AS FOOD AND TONIC.

While water, tea and coffee will quench the thirst, they are neither a tonic nor a food, but wine is both. And this fact should always be remembered that wine—the fermented juice of the grape—is a natural tonic and a simple, pure, non-intoxicating food.

The advice of the Apostle Paul to "take a little wine for your stomach's sake" is a recognition of the food value and health-giving qualities of pure wine. The most eminent authorities in medicine and therapeutics give the same advice as to wines.

Dr. J. Starke, a German scientist, in his book on "Alcohol," published in 1907, says: "From the earliest childhood to the most advanced years, there is hardly a period of life in which wine is not ordered with the best results. Only there is this difference, that in childhood alcohol is given purely as a medicine, while in adult life it is used partly as such and partly as a dietetic agent, to be used more and more as a beverage and as a nutrient."

In his book, just issued, on "Foods and Their Adulterations," Dr. H. W. Wiley, Chief of the Bureau of Chemistry, United States Department of Agriculture, thus refers to the subject: "Food also includes those bodies of a liquid character which are classed as beverages rather than as foods. All these bodies have nutritive properties, although their chief value is condimental and social." And this leads us to consider the use of wines as one of the social features of a well-ordered meal.

#### THE PROPER USES OF WINES.

The large increase in the consumption of wines in this country is due to the habit of using them at our meals. Many of our people have adopted the sensible European custom of drinking light wines only at the family table.

Wines are not intended to be used to intoxicate, but to be taken with food, and in the same manner as food—that is, temperately. When a man wants a stimulant, he does not want a light wine, and therefore he takes whiskey or some other strong drink. On the other hand, people who habitually drink wines seldom crave for spirituous liquors. This is abundantly proved by the people of the wine-

drinking countries of Europe. In France, for example, where the total consumption of wines is 34 gallons of wine a year for every man, woman and child, the per capita consumption of alcoholic liquors is only 8½ gallons. In Italy the consumption of wine is 32 gallons per capita per year, while the per capita consumption of all alcoholic liquors is only one-half gallon.

#### THE MORE WINE, THE LESS STRONG DRINK.

The recent reports of the Department of Commerce and Labor show that the consumption of beer and light wines is increasing, while the use of ardent spirits is declining in this country. "It would seem," said an official of this Department, "that the American people are becoming more temperate by the growing demand for beer, light wines, and mild drinks."

The increased use of our good, pure, native wines should be encouraged as conducing to temperance. Already leading advocates of temperance are waking up to the fact that there is an almost universal desire among all people for some kind of stimulating beverage, whether it be tea, coffee or light wines. To eradicate the desire is impossible; to prohibit the use of such beverages is impracticable. Therefore temperance is best promoted by providing people with a beverage which is cheap, pleasant to the taste, and harmless unless used to excess. Such a beverage is light wine. It is the pure juice of the grape, with certain properties which act as a tonic. It is palatable and refreshing, and contains only from 8 to 10 per cent. of alcohol, which can be reduced by the addition of water.

In the interests of temperance, it is to be hoped that the American people will become educated to the proper use of this healthful beverage—wine—at their meals. Then wine would take the place of strong liquors, and the American people would become the most temperate people in the world. In the wine-growing countries of Europe, where people, women as well as men, drink wine like water, the use of spirituous liquors and alcoholism is little known. The temperance movement in those countries is not directed against wine, but only against ardent liquors, such as brandy and cordials. In fact, the governments of France, Italy, and Spain recognize so well the fact that wine-drinking is to be encouraged that they favor wines in their laws.

That great President, Thomas Jefferson, when an attempt was made to place a high tax on wine, wrote: "I rejoice as a moralist at the prospect of a reduction of duties on wine by our National Legislature. . . . NO NATION IS DRUNKEN WHERE WINE IS CHEAP, AND NONE SOBER WHERE DEARNESS OF WINE SUBSTITUTES ARDENT SPIRITS AS ITS COMMON BEVERAGE."

#### WINE AS THE NATIONAL DRINK.

There is an old and very true saying that "We are largely what we eat and drink." As with the individual, so it is with the nation. "Tell me what is the every-day food and drink of a nation," says the historian, "and I will tell you what its character and standing are in civilization."

Thus, the most civilized people have the best foods, and they also have the best drink, which is wine. That wine is the "best drink" for the individual, and the nation may be seen by comparing it with other national drinks, such as tea, coffee and strong liquors. Compare, if you please, two such countries as China and France—one the largest consumer of tea, the other the largest consumer of wine. Who are the happy, light-hearted, thrifty people in the world, and who are the heavy, sombre and dull-witted? Do not the former live in the wine-growing countries of Europe, where every man, woman and child drinks wine freely three times a day at their meals? The millions of French and Italian peasants, with their simple meal of bread, or maccaroni and cheese, and a flagon of wine, are as happy and contented as the majority of the better fed and better dressed workmen of our own land. Why not combine the prosperity of one with the contentment of the other? Why not make wine our national beverage, and use it as it should be used—namely, at the table with our meals?

# Brotherhood Wine Company

HOUSE FOUNDED 1893

One of the Brotherhood Wine Co.'s Cellars.

A comparison of champagnes, especially the foreign wines, with Brotherhood Champagne, reads as follows:

	PER CASE
Foreign Champagne	- - \$32.00
Brotherhood Vin Crest Brut	20.00
Difference	- - \$12.00

## AND THAT'S THE ONLY DIFFERENCE

Brotherhood Champagne of the vintage of 1903, if made in France would be called the Grand Vintage, for it is perfected in every requirement to bouquet, sparkle and color.

The expense of making Brotherhood Champagne is actually greater than that incurred by the French, whose cost comes in duty, freight and commissions, none of which can possibly enter into the quality of the wine. So twelve dollars are expended for sentiment rather than quality.

If you have never had Brotherhood Champagne try a case now and before you have half consumed it you will be its steadfast friend.

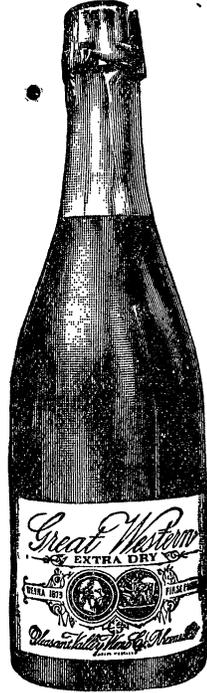

### BROTHERHOOD WINE COMPANY

It is pure of the purest, with a sparkle its own,  
Of the delicate flavor that long lingers on ;  
Thorough-bred, thorough-ripened, for long years it has lain,  
Till it's rich, rare and royal—The Great Western Champagne.

THE FINE WINE GRAPE, possessing the same qualities as those grown in France, with the French method of making, give

## Great Western Extra Dry Champagne

the exquisite taste and sparkling effervescence of the best foreign wines. Great Western is made under the same identical methods as the most select French Champagnes, and it is aged for five years in the same kind of cellars. This gives Great Western an excellence which the French connoisseurs themselves recognize.

Nearly one hundred years of cultivation of Great Western vineyards in New York State have given the soil the elements that produce the same peculiar quality Champagne grape as grown in the famous vineyards of France.

At the Paris Exposition Great Western Champagne was awarded a gold medal for quality.

Great Western Champagne costs 50 per cent. less than the imported. The U. S. Custom House receives no revenue from Great Western and you get 100 per cent. wine value.

# THE MAMMOTH PLANT OF THE CALIFORNIA WINE ASSOCIATION

**CAPACITY:  
10,000,000 GALLONS OF WINE**

VIEW OF "WINEHAVEN," ON SAN FRANCISCO BAY.

**The Largest Winery Plant in the World, Covering An Area of Forty-seven Acres.**

ANY of our readers will be greatly surprised and interested to learn that the largest winery plant, not only in the United States but in the world, is located in California, across the Bay from San Francisco. It forms the centre of the great wine industry of that State. Such an institution is a monument to American enterprise, as well as to the California wine industry, which represents a total of 250,000 acres of vineyards, and millions of dollars interested in wine cellars, buildings, machinery, warehouses, and stocks of wines, etc. A short account of the great establishment at "Winehaven" will therefore be of much interest.

The property consists of 47 acres of land, with a frontage of 2,000 feet on San Francisco Bay. A wharf, 1,800 feet long, runs to deep water, and from there the largest ocean-going vessels can be loaded with wines and brandies for New York and other Eastern cities, and for all foreign countries, even to India, China, and Japan, which are good customers for California wines. The Richmond Belt Railway connects the plant with the transcontinental lines.

The main building, which will also be used for storage, is constructed of steel, concrete and brick. It will be, when fully completed, 800 feet in length and 200 feet in width; two stories and basement. The total storage capacity will be for 10,000,000 gallons of wine.

Nearby is an immense winery and fermenting plant, 600 by 150 feet, with a capacity for crushing or pressing 25,000 tons of grapes in a season. The location is such that the supply of grapes is brought largely by water from different sections of the State, and the greatest care is taken to have the grapes arrive in perfect condition.

Among the other structures are a large distillery for producing millions of gallons of brandy; a sherry house, 80 by 100 feet in size, and heated by steam or hot air; a large bottling establishment for bottling the fine wines sold under the name and label of the California Wine Association; a complete cooperage and box-making plant; a plant for making unfermented grape juice—in brief, a great establishment for everything which is connected with the production and distribution of wines and even the by-products of the grape. In fact, one feature of the plant is the part devoted to the utilization of the by-products, such as the seeds, etc., and the production of cream of tartar, etc.

The grounds around "Winehaven" have been laid out and will be beautified by landscape gardeners, and there is a large hotel, called the "Winehaven House," where visitors and guests will always be made welcome and properly entertained. As something unique in the wine industry of the world, "Winehaven" is sure to be visited every year by thousands of sightseers and tourists.

# EPILEPTIC FITS

---

---

**E**PILEPTIC FITS, so long regarded incurable, have at last been conquered. The Epilepto treatment, which is along entirely new lines, has been successful in curing a large percentage of the cases treated, and all have shown marked improvement.

Sufferers from Epilepsy are sensitive and reluctant about having their names advertised; in view of this fact, and in consideration of their feelings, we refrain from publishing testimonials of our cured patients, but have a large number on file, and will be glad to furnish copies of same as well as the names and addresses of many persons to whom we have permission to refer.

The Epilepto Institute is a corporation organized under the laws of the State of New York, the sole aim and object being the treatment and cure of Epilepsy.

The main office is conveniently located at No. 211½ West 45th Street, two doors west of Broadway, New York.

A specialist is always in attendance, and can be consulted absolutely without charge. All who suffer in any degree from Epilepsy are cordially invited to call.

Persons living at a distance from New York are requested to write for free booklet and full particulars.

## A PRIVATE WATER SYSTEM

This half-tone illustration shows the Bethalto Water System, the best, most modern and simplest in operation.

## THE BETHALTO WATER SYSTEM (PATENTED)

will supply **your** farm or suburban home with fresh, cool, aerated water conveyed from **your own** well, cistern or spring, direct to the faucets wherever water is desired, you can thus have kitchen, bathroom, laundry and sprinkling conveniences, the same as in a large city. This system is as practical in Winter as in Summer, and is superior to any other water system in that it furnishes fresh, cool and potable water to all parts of your house and premises without using an Elevated Tank, in which the water is liable to freeze in Winter and get stale and warm in the Summer.

### PROTECTION AGAINST FIRES

You have full control over the pressure, and in case of fire a simple turn of the regulator will momentarily increase the pressure, and thus a reliable **Fire Protection** is at your command.

### EASILY OPERATED

The only labor required is to pump air into the air receiver; that is, with these systems **you pump air only** and the air forces the water to any place you desire it. Hand or power systems furnished. Unlimited testimonials can be furnished from satisfied and enthusiastic users. Prices are very reasonable. Full guarantee with each system.

The Bethalto Water System received the highest award at the Louisiana Purchase Exposition, St. Louis, U. S. A., 1904.

"Universal" Steel Shelving—Shelves Adjusted

## UNIVERSAL STEEL SHELVING

—Unit System—shown in illustration on this page, combines all of the qualities of convenience, economy of space, and effectiveness. This shelving is adjustable, allowing for a shelf every two inches; may be built in any size up to four feet wide for each unit, and any depth up to 36 inches. This shelving is safe against rust, and cannot sag or get out of plumb. Easily set up or taken down. When collapsed may be stored in a small space. All modern buildings are being equipped with this style of shelving.

## Expanded Metal Lockers

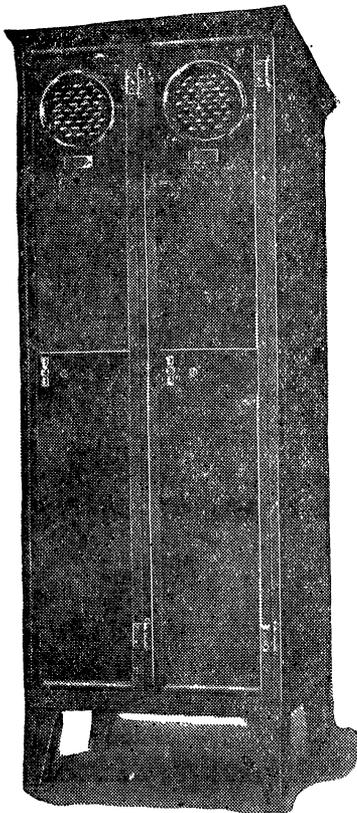

(Number 1206, Type B)

Steel throughout—back, top and shelf solid. Sides, front and bottom ventilated. Can be erected in any grouping required.

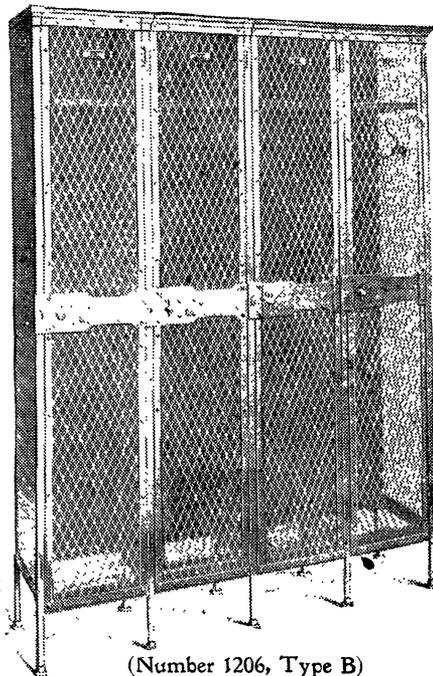

## Sheet Steel Lockers

(Number 1406, Type U)

Especially adaptable as a locker for banks and trust companies—also for general office use.

(Number 1406, Type U)

(Number 1206, Type B)

### Unit Construction

Our Lockers have been developed so that they are more than a permanent investment—they are an asset. Every part of every standard size Locker is made to gauge. Each Locker has an individual top, shelf and bottom. All doors, division panels and backs of a given size are interchangeable; therefore, additions or alterations in arrangement can be made at any time without cutting or fitting, or expert assistance. Additional parts for extending or rearranging can be procured at any time without delay. The simplicity of our Lockers reduces the cost of erection which should be given consideration in comparing prices. In order to save transportation charges Lockers are shipped knocked down unless otherwise specially arranged for. MR. BUSINESS MAN :

When you attempt to solve your own transportation problem—and you will have to try its solution soon, if you want to keep abreast of modern business development—you do not want the high-priced car, nor the one that is complicated of design or difficult of operation.

You want the SIMPLEST there is, for in mechanics as well as in business the SIMPLEST IS THE BEST AND MOST EFFICIENT as well as the CHEAPEST.

Next time you meet a Maxwell motorist, stop him. Ask him how he likes the three-point suspension, the multiple-disc clutch, the strong shaft drive, and the many other features that are exclusive Maxwell inventions, and imitated by our followers.

There is only one reply : The Maxwell is the SIMPLEST IN CONSTRUCTION, and the MOST RELIABLE AND MOST ECONOMICAL IN OPERATION.

Or ask us. Let me tell you all about the Maxwell, and the reasons why our cars are SUPERIOR TO ANYTHING ON WHEELS.

If you have any use for transportation at all—every business man has—it will pay you to investigate the Maxwell. Your automobile knowledge is not complete without a thorough knowledge of the Maxwell line for 1908.

## THE RYEDE ADJUSTABLE INCANDESCENT LIGHT HOLDER

We have now before you the best and most ingenious Adjustable Incandescent Light Holder ever invented.

Best and most economical equipment for factories and establishments needing a lamp that can be easily adjusted and meet all the requirements of an adjustable or permanent fixture for the holding of an incandescent light.

Easily fastened to ceiling, wall or floor; instantly ready for service without altering the wiring or other fixtures. Only bracket made for its purpose that will not get loose through constant use.

It will hold any style or make of socket, either metal or porcelain, and will not interfere with the shade or globe.

## Ryede Ribbon Leaders

Are made from spring brass highly polished and nickel plated. The great feature of these leaders is that they will hold the ribbon neatly and straight, and make it possible to lead ribbon through the most delicate fabrics.

One set of ribbon leaders  
One pair of clothesline fasteners  
35 cents prepaid.

## The Ryede Vending Machine

The Ryede Outdoor and Indoor Vending Machines are the neatest, strongest, safest, surest and the best designed on the market. They are made in two, four, six or eight slots or columns.

The Ryede is a machine designed to vend gum, chocolate and all kinds of confectionary in stick or package.

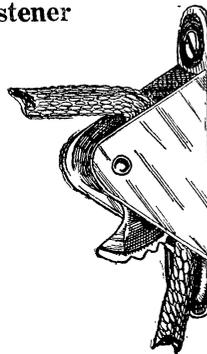

A great feature of the Ryede machine is that in case repairs are found necessary the entire mechanism can be instantly removed from the case and repairs made or another substituted without removing the case from its original position, thereby making the machine a constant vendor at all times.

A request will bring full information.

## Little Giant Clothesline Fastener

A new specialty, designed for holding a clothesline without tying. Can be instantly adjusted from loose to tight. Just put the line through from top, pull as tight as desired and it holds fast every time. Simple to loosen. Made from pressed steel.

## Ryede Puzzle

Will Hold You for a While.

Keyring, Nameplate and Puzzle combined. Greatest puzzle in existence. A poser for your friends when there's nothing doing. It teaches the one working it new ideas in mechanism. If the Ryede interferes with business, quit the business.

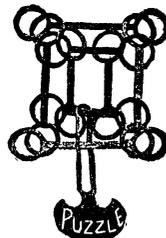

THE RYEDE IS A GENUINE PUZZLE.

The Ryede Puzzle and the Ryede Perfection Puzzle, 25 cents prepaid.

We are making a new line of Novelty Specialties which are not shown above. Send for circulars.

# RUPTURE

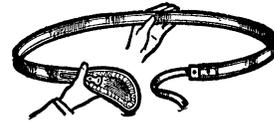

Why do YOU wear torture trusses like these shown here?

ELASTIC

SEE HOW THEY CUT

SPRING

This is the worthless Elastic Truss generally fitted with water-pads—with leg straps that pull the pads on the pelvic bone, leaving real opening of Rupture unprotected. The Belts around body often have to be made so tight as to cut into the sides, as shown above, and yet fail to hold. Do not continue to wear a worthless Truss like this.

This is the criminal Spring Truss with its Pads, made to press on the bone and on parts not connected with the Rupture at all. What unnecessary and harmful pressure is exerted by such a Truss! Do not continue to torture yourself with a Truss like this.

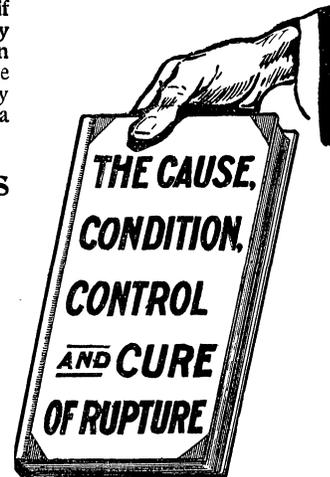

## MY TRUSS WITHOUT BELTS

Think of the suffering and the trouble spared if you could get your Rupture HELD as we positively guarantee to do; if you could do your work in COMFORT and FREEDOM, knowing that you were as SAFE as if you never were ruptured, and that by CONTINUOUS HOLDING of the Ruptured Parts a CURE was made possible for you at last!

### A PERFECT Holder that Cures

And you will be convinced of this wonderful truth when I fit you, or after a careful reading of my book, which I gladly mail FREE to all writing for it. I state FACTS only and show photographic illustrations of the Cluthe Truss, guaranteed to hold ANY Rupture. SMALL COST. No springs, no leg straps, may be worn in bath; most durable. Call this week, or no matter where you live, write NOW for my 40-page descriptive FREE BOOK (sealed), with Order Blank

And a list of 3,500 benefited and cured patrons, living in all parts of the U. S., Canada, and Mexico, who, in the cause of humanity, have offered to let us make known TO YOU their successful experience with my Truss.
