

How a Keel Is Laid

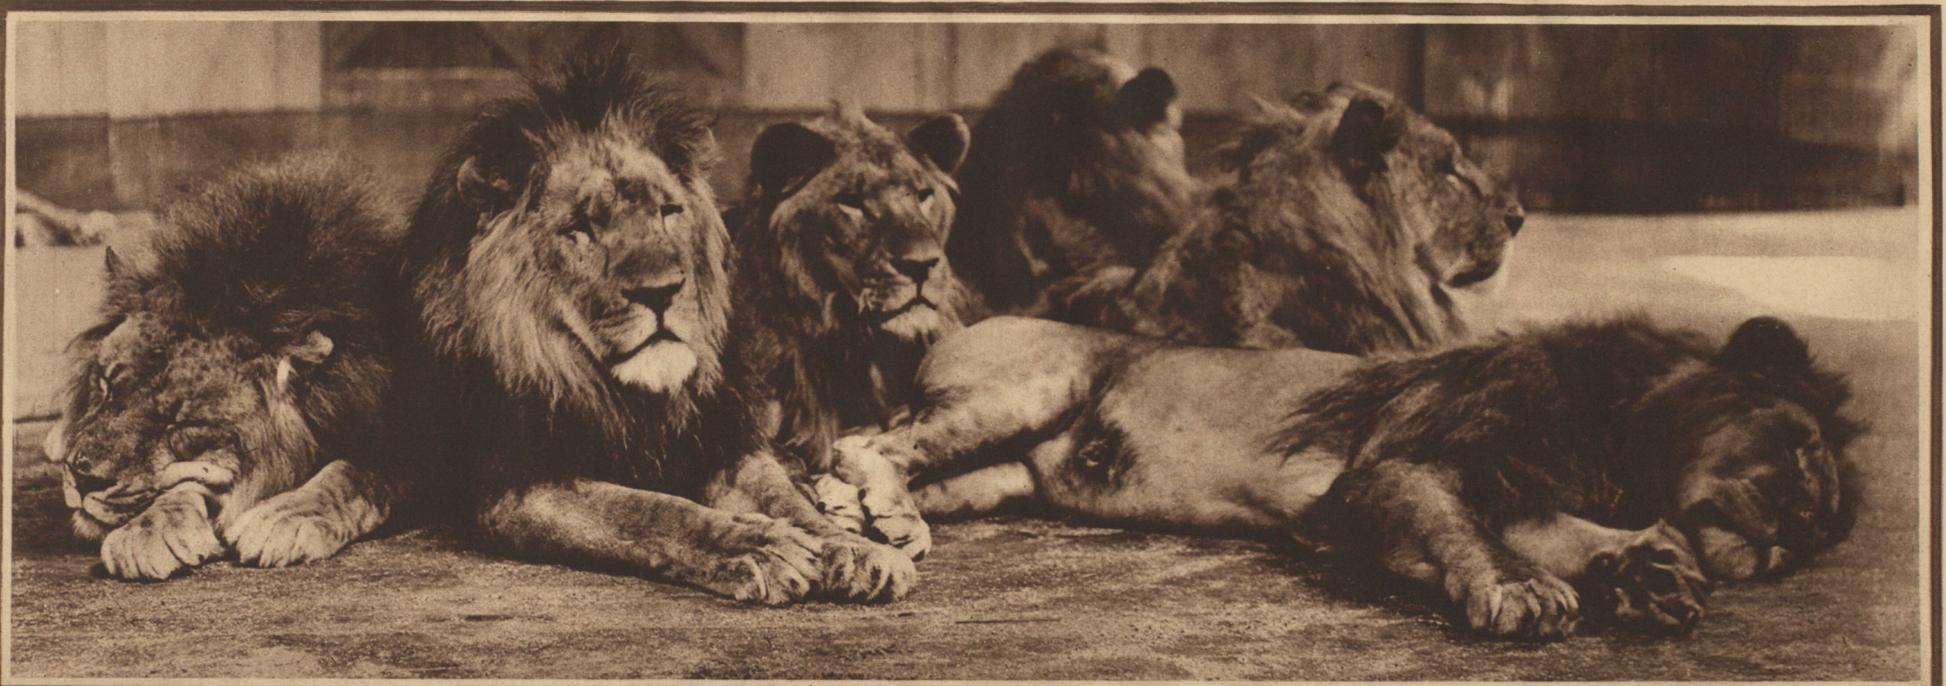

Eleven seconds after the "Commandant Challes" was launched at Portland, Ore., the keel for the next ship was laid in its place. The picture on the left, taken while the ship was still on the ways, shows the forward part of the keel lined up, while two gangs of men are raising the after part to position on the blocks—one gang pushing, and the other pulling on ropes. The picture at the right, taken while the spray from the launching is still in the air, shows the keel laid and trued up in eleven seconds. This record was made by the men of the Foundation Company's Portland (Ore.) yard.

TWENTY YEARS AGO

Woodrow Wilson was a professor of jurisprudence at Princeton, and General Pershing was an instructor in tactics at West Point. Samuel Gompers, alone of this group of leaders, had reached his stride at that time, for he was then President of the American Federation of Labor, and was shaking his finger.

Press Illustrating.

Luna is all right enough for a party now and then, but it certainly does bore the lions who have to stay there day in and day out
