

## Enclosure of letter from Alexander Graham Bell to Alexander Melville Bell, November 24, 1865

June 24, 1921. Mr. DeLand:

A remarkable find! It relates to my earliest scientific investigations: — the reasonable pitches of the mouth cavities during the utterance of vowel sounds.

The date, 1865, shows that I was 18 years old when letter was written. I recommend binding for safe preservation. It is a unique document relating to my early scientific work before coming to this country.

(Signed) A.G.B.
