Dear Danny:

When you begin practicing the production numbers in which you use Clarence and Terrance please feel free to call on me if you need help in mastering the manipulation of the dummies.

I have already mentioned to Mr. Panama and Mr. Frank that I will be happy to assist you in whatever way I can without any financial obligation to either you or the studio. Since you are so busy when on the set, I am taking this opportunity to inform you of my willingness to be of help.

In making these dummies I designed them with you in mind, recognizing your great talents of mobility and animation. Both Clarence and Terrance were made to operate with this same kind of mobility.

Millions of people the world over recognize you as a top-notch comedian just as hundreds of ventriloquists recognize me as a specialist in my field so naturally I am concerned that you get the most out of the humor possibilities of the figures and exhibit them to their best advantage.

There are many tricks associated with operating a ventriloquist dummy which are developed thru the years as the ventriloquist becomes familiar with his dummy. One of the most intricate skills in operating a dummy is mastering the mechanical manipulation of the mouth so that each syllable of each word is accounted for in the mouth action of the dummy.

Please feel free to call upon me.

Yours very sincerely,

GLEN CARGYLE
